PRODUCTION PROPOSAL · APRIL 2026 · COX-2026-VHC-PROD

AIWA + AIKA Production Deployment for Vitality Home Care

Following the successful pilot and Pre-SOW confirmation, this proposal outlines the production scope, feature set, integrations, and commercial options for Code-ox Technologies.

AIWA WhatsApp AI Agent | **AIKA** Voice AI Agent | **HMS** Nixpend Integration | **SIP** Telephony | **KSA** Saudi-Region Cloud | **Dashboard** Unified Coordinator

PREPARED FOR	LOCATION	DATE	REF
Vitality Home Care	Riyadh, KSA	April 2026	COX-2026-VHC-PROD

01 Deployment Overview
02 AIWA — WhatsApp Agent
03 AIKA — Voice Agent
04 Unified Dashboard
05 Integrations
06 Security & Data
07 Commercial Options
08 Inclusions & Timeline

CONTEXT This proposal follows the successful pilot and Pre-SOW confirmation already exchanged between Vitality Home Care and Code-ox Technologies. It defines the full production scope, feature set, integration assumptions, commercial options, and timeline for the Riyadh deployment.

SECTION 01

01 Deployment Overview

A unified, always-on patient coordination platform spanning voice and WhatsApp, integrated directly with Vitality's Nixpend HMS and deployed on Saudi-region cloud infrastructure.

AIWA	AIKA	Dashboard
WhatsApp omnichannel — inbound patient conversations and outbound marketing campaigns	24/7 voice receptionist — inbound calls, therapist confirmations, reminders, outbound dialling	Unified Dashboard — coordinators see conversations, bookings, campaigns, and escalations in one place

NOTE ON AIWA NUMBER

We strongly recommend a dedicated WhatsApp Business number for the AIWA AI agents, separate from any human-operated Vitality numbers. AI agents perform best when they have sole ownership of a number, avoiding conflicts with parallel human-led conversations and ensuring a consistent patient experience.

AIKA – AI Calling / Voice Agent | *AIWA – AI Chat-based / WhatsApp Agent*

SECTION 02

02 AIWA — WhatsApp Agent

PATIENT-FACING

- 24/7 inbound conversations in Arabic and English within the same chat
- Conversational booking — service type, preferred date and time, location
- Location via patient record or Google Maps link for therapist matching
- Document handling — images (JPEG, PNG) and PDFs (prescriptions, referrals, wound photos, reports)
- Booking confirmation with therapist name, service, date, time
- Patient escalation messaging when handoff is triggered

OUTBOUND MARKETING

- Campaign module for WhatsApp broadcasts — promotions, seasonal offers, re-engagement
- Template message management with Meta approval workflow
- Patient segmentation by service type, district, last visit, and visit history
- Campaign scheduling and response capture

OPERATIONAL

- Multi-number support across service lines or geographies
- Handoff to human coordinator with full conversation context
- Escalation on urgent language, no availability, or explicit human request
- Live write-back to Unified Dashboard on every booking milestone

SECTION 03

03 AIKA — Voice Agent

PATIENT-FACING

- 24/7 inbound AI receptionist in Arabic (Najdi) and English
- Conversational booking over voice for patients who prefer calling
- Automated patient reminder calls 2 hours before every appointment

THERAPIST-FACING

- Outbound confirmation call to therapist immediately after each booking
- Language detection per therapist (Arabic / English)

OUTBOUND MARKETING

- Voice campaign module — health check reminders, promotions, follow-ups
- Call list management, scheduling, and retry logic
- Structured outcome capture per call — interested, not interested, callback, booking requested

SECTION 04

04 Unified Dashboard

- Single pane of glass for AIKA and AIWA across all numbers and campaigns
- Active conversations and ongoing calls in real-time
- Booking pipeline — requested, matched, confirmed, reminded, completed
- Therapist view with availability, district assignments, current bookings
- Campaign performance metrics for WhatsApp and voice outbound
- Coordinator inbox for escalations with full conversation and call context
- Export and reporting for operational and clinical review

SECTION 05

05 Integrations

Nixpend HMS (ERP)
Therapist availability, district-based matching, booking write-back, and patient record sync. System of record.

SMS Gateway
Transactional patient messaging where WhatsApp is unavailable or as a fallback channel.

Payment Gateway
Payment link generation, collection, and reconciliation against bookings.

Google Maps
Patient location capture and resolution for therapist district matching.

Email
Therapist booking notifications with patient documents attached; coordinator escalation alerts.

INTEGRATION ASSUMPTIONS

Nixpend: Pricing assumes REST API access with standard endpoints for availability, booking, and patient records. API documentation not yet received. If non-standard integration is required (SOAP, direct DB, file-based), cost will be revised accordingly.

SMS & Payment Gateways: Integrations are included in pricing. Specific providers are not yet confirmed — final cost may vary based on each provider's API complexity once selected.

SECTION 06

06 Security & Data Handling

- **Hosting** — Saudi-region cloud (AWS Bahrain / KSA, Alibaba Cloud KSA, or other approved Saudi-region providers), compliant with local data residency expectations.
- **Encryption** — TLS 1.2+ in transit for all traffic; AES-256 encryption at rest for databases, call recordings, and stored documents.
- **Data Residency** — All patient data (conversations, recordings, documents, bookings) remains within the Saudi region.
- **Credential Security** — API keys, SIP credentials, and Nixpend tokens stored in encrypted secrets management.
- **Audit Trail** — All booking actions, escalations, and data access are logged for operational review.

COMPLIANCE NOTE

Formal compliance certifications (PDPL audit, ISO 27001, SOC 2) are not in scope for this engagement. If Vitality's IT or legal team later requires formal certification, it can be scoped as an add-on.

SECTION 07

07 Commercial Options

OPTION 1

Setup + Pay-as-you-go

Start with controlled spend, scale usage based on actual adoption.

One-time setup & deployment	SAR 30,727
USAGE — BILLED MONTHLY	
AIKA voice minutes	**SAR 2.48 / min**
AIWA inbound messages	**SAR 0.21 / msg**
AIWA outbound messages	**SAR 0.32 / msg**

Best suited for — organisations starting with a controlled spend envelope and scaling usage based on actual adoption and growth.

RECOMMENDED

OPTION 2

Annual Plan

Predictable budgeting with lower effective per-unit cost.

Annual platform fee	SAR 65,000 / yr
INCLUDED IN ANNUAL FEE	
AIKA voice minutes included	**12,000 mins / yr**
AIWA inbound messages included	**48,000 msgs / yr**
OVERAGE (BEYOND INCLUDED VOLUME)	
AIKA voice overage	**SAR 2.48 / min**
AIWA inbound overage	**SAR 0.21 / msg**
AIWA outbound messages	**SAR 0.32 / msg**

Best suited for — steady-state operations, predictable budgeting, and a lower effective per-unit cost versus pay-as-you-go.

WHY WE RECOMMEND THIS

Running the same 12,000 mins and 48,000 msgs under Option 1 costs **SAR 30,727 + SAR 39,840 = SAR 70,567** in year one. The Annual Plan covers the same volume for **SAR 65,000** — a saving of **SAR 5,567** — with no setup fee and fully predictable budgeting.

AIWA OUTBOUND MESSAGES — APPLIES TO BOTH OPTIONS

AIWA outbound messages are billed at **SAR 0.32 / msg** under both Option 1 and Option 2. Outbound messaging volume is driven entirely by Vitality's own marketing and campaign activity, so it is metered separately and is not bundled into the annual plan. You only pay for what you send.

SECTION 08

08 Inclusions & Exclusions

INCLUDED — BOTH OPTIONS

- Full platform build, configuration, and deployment on Saudi-region cloud
- Cloud hosting fees (borne by us)
- Nixpend HMS integration *(subject to REST API note)*
- SMS Gateway integration *(subject to provider note)*
- Payment Gateway integration *(subject to provider note)*
- SIP trunk integration with Vitality's STC infrastructure
- Multi-number AIWA and AIKA setup
- WhatsApp Business API provisioning (BSP setup, template approvals)
- Unified Dashboard with coordinator accounts
- Arabic (Najdi) and English language support
- User acceptance testing and go-live support
- Standard support and monitoring during business hours
- All underlying AI, speech, and telephony processing costs

EXCLUDED

- SIP trunk carrier costs and per-call telecom charges from STC
- Third-party SMS gateway subscription and per-message fees
- Payment gateway transaction fees
- Formal compliance certification (PDPL audit, ISO, SOC 2)
- Integration with systems not listed in Section 05
- EMR integration beyond Nixpend
- Custom development outside agreed scope

SECTION 09

09 Timeline — 8 Weeks to Go-Live

W1	W2	W3	W4	W5	W6	W7	W8 🚀

WEEKS 1–2

Kickoff & Setup

- Project kickoff meeting
- Nixpend API review & sandbox access
- WhatsApp BSP provisioning
- SIP trunk configuration
- Saudi-region cloud env setup

WEEKS 3–5

Core Build

- AIWA WhatsApp agent build
- AIKA Voice agent build
- Nixpend HMS integration
- Unified Dashboard build
- Arabic (Najdi) language tuning

WEEKS 6–7

Integration & UAT

- SMS & Payment gateway integration
- End-to-end flow testing
- User acceptance testing (UAT)
- Bug fixes & refinements
- Coordinator onboarding

WEEK 8

Go-Live 🚀

- Production deployment
- Live monitoring & go-live support
- Handover & documentation
- Support handoff to ops team

DEPENDENCIES FROM VITALITY

This timeline assumes that the ERP (Nixpend), the selected payment gateway, and the selected SMS gateway are all fully functional from day one, with sandbox access provided to our team at project kickoff. Any delays in these environments will shift the go-live date accordingly. Timeline is also subject to: changes in Nixpend API documentation, SMS/payment gateway selection, stakeholder feedback turnaround, scope changes, and force majeure events.

PROPOSAL ACCEPTANCE · SIGN & RETURN TO SHABEEB.K@CODE-OX.COM

"I confirm that I have read and understood the scope, commercial terms, integrations, and conditions set out in this proposal, and I authorise Code-ox Technologies to proceed with the production deployment on behalf of Vitality Home Care."

☐ Option 1 — Setup + Pay-as-you-go (SAR 30,727 one-time)

☐ Option 2 — Annual Plan (SAR 65,000 / year) RECOMMENDED
