FINANCIAL PROPOSAL · REVISION 1 · 10 OCTOBER 2026

Odoo 19 Upgrade & Urban Eats Implementation on One Odoo Foundation

Fixed pricing for the complete Odoo 18 → 19 upgrade and the Urban Eats / MYLK implementation — central kitchen, POS and Kitchen Display, delivery platforms, payments, ZATCA and the move off Foodics — with go-live on 1 January 2027.

Odoo 18 → 19 Full Upgrade
Central Kitchen Manufacturing
POS + Kitchen Display
7 Delivery Platforms
Foodics → Odoo
ZATCA Phase 2

Delivery platforms: HungerStation · Jahez (incl. Noon) · Keeta · The Chefz · ToYou · Ninja · Mrsool

odoo Silver Partner

OFFICIAL ODOO PARTNERSHIP

Delivered by a Certified Odoo Silver Partner

Code-ox Technologies holds official Odoo Silver Partner status — authorised to sell, implement, configure and support Odoo ERP deployments, with direct access to Odoo's partner support channels.

OVERVIEW

Pricing at a Glance

This proposal follows our response to your detailed review and prices the two pieces of work as fixed amounts. **Part 1** is the complete Odoo 18 → 19 upgrade. **Part 2** is the Urban Eats / MYLK implementation, offered in two options that differ only in how the delivery platforms are connected. Everything else — POS, kitchen, inventory, manufacturing, payments, ZATCA and reporting — runs in Odoo itself and is identical in both options.

1 PART 1 · FIXED PRICE
Full Odoo 18 → 19 Upgrade

SAR 4,950 excl. VAT

Studio customisations — SAR 2,700
Custom fields, views, reports, automations, server actions and access rules.

Third-party modules — SAR 2,250
Review, migration and testing of the third-party modules you shared with us.

2 PART 2 · CHOOSE ONE OPTION
Urban Eats / MYLK Implementation

OPTION A · RECOMMENDED

Code-ox Aggregator Hub

SAR 40,000 excl. VAT

- Code-ox builds the aggregator hub inside your Odoo, connecting **HungerStation, Jahez (incl. Noon), Keeta, The Chefz, ToYou, Ninja and Mrsool** — code owned by Tara Holding.
- Any future platform beyond these seven: **SAR 1,000 each**.
- **No recurring per-branch fee** — no subscription cost as you add branches and brands (new branch rollout billed separately, page 10).

OPTION B

Aggregators via UrbanPiper

SAR 30,000 excl. VAT

- **Odoo's standard UrbanPiper connector**, configuration only — no custom connector. Used only for the delivery platforms; everything else runs in Odoo itself.
- Plus UrbanPiper subscription of approx. **SAR 1,700–1,900 per branch per year**, paid through Odoo — we will share the exact figure once we receive confirmed pricing from the Odoo team.

INCLUDED IN BOTH OPTIONS

Urban Eats structure, shared operations, product master & procurement, central kitchen manufacturing, Restaurant POS & Kitchen Display, settlement reporting, Foodics migration & archive, loyalty & promotions, WhatsApp, Paymob, Tabby & Tamara, POS terminal integration, ZATCA Phase 2, training, go-live and 6 months of support.

SCOPE OF WORK

Upgrade & Operational Foundation

#	WORKSTREAM	WHAT'S INCLUDED
01	**Odoo 18 → 19 Upgrade** Part 1	Written assessment before work starts — compatibility issues, replacement modules or licences, exclusions and third-party vendor costs. Full backup, complete upgrade on a staging copy, data checks and functional testing. Studio customisations and the shared third-party modules migrated; a module with no Odoo 19 version is migrated or a replacement proposed — nothing removed without your written approval. Per-company validation for all six companies and a module-by-module register (page 7); production upgraded outside working hours after your sign-off.
02	**Standard Odoo First** Applies to all work	Standard > Configuration > Studio > Supported module > Custom development only when necessary. Every custom item comes with a short written justification and your approval; custom code sits in separate, upgrade-safe, documented modules in a repository owned by Tara Holding.
03	**Urban Eats Structure** Architecture document for approval	Existing companies kept as they are. Urban Eats as one company (one CR, one VAT number, one set of accounts). **Brand**, **Branch** and **Channel** reporting dimensions — each brand with its own POS categories, menus, pricelists and website; one warehouse and one POS per outlet. P&L by brand, branch and channel. Built from standard Odoo objects; POS revenue tagging standard by default, with an optional small module (page 6).
04	**Shared Operations**	Main Warehouse receiving all supplier deliveries; Central Kitchen as its own warehouse; outlets resupplied automatically through standard routes and minimum stock rules. Shared finance with "Urban Eats Shared" cost tagging and optional brand allocation. B2B orders fulfilled from Main Warehouse or Central Kitchen. Access rules: central team sees everything, outlet staff see only their own POS and warehouse.
05	**Product Master, Procurement & Inventory**	One generic material per ingredient used in all recipes; supplier products as vendor lines with code, pack size and price, converted automatically on receipt; supplier barcodes on purchased packs only. Product types and an agreed coding scheme. Minimum stock rules at Main Warehouse, Central Kitchen and outlets, with lot and expiry tracking where needed. Production cost from materials (labour and overhead optional); waste recorded with a reason.
06	**Central Kitchen Manufacturing**	Demand plus minimum stock > daily production plan > manufacturing orders > automatic ingredient consumption > stock > transfers to outlets. Make-to-stock, make-to-order and no-carry-over items (expiry-dated, leftovers listed for daily disposal). One simple "what to make today" screen for kitchen staff. Outlets use recipe kits, so each POS sale deducts its ingredients from that outlet's stock.

SCOPE OF WORK

Sales Channels, Compliance & Go-Live

#	WORKSTREAM	WHAT'S INCLUDED
07	**Restaurant POS & Kitchen Display**	Odoo Restaurant POS for each branch and brand — menu, modifiers, combos, prices, taxes, payment methods and receipts. Odoo Kitchen Display for each branch, routed by station.
08	**Delivery Platforms** Option A: Code-ox hub · Option B: UrbanPiper	HungerStation, Jahez (incl. Noon), Keeta, The Chefz, ToYou, Ninja and Mrsool. API access requested by Code-ox from each platform on Tara Holding's behalf, using the merchant account of each entity; each platform is integrated once its API is received. Future platforms SAR 1,000 each in Option A. Structured Brand > Branch > Platform Store > POS / Kitchen so a new branch or brand is added by configuration. Menu sync, stock and sold-out sync, order status updates back to each platform, failure and retry handling, multiple branches and store IDs. A detailed integration plan per platform is shared before build.
09	**Settlement & Reconciliation**	Reconciliation and reporting of gross sales, commissions, VAT on commissions, promotions, refunds, cancellations, adjustments and penalties, delivery charges and net payouts against Odoo, where the platform provides the data. The level of automation is confirmed in the separate settlement plan, following Odoo's official response.
10	**Foodics Migration & Archive**	Menus, categories, products, modifiers and customers migrated per brand; opening stock from a physical count at cutover. Full history archived in open formats under your control, with an index and data dictionary (page 7) — exported once before cutover and again after the last Foodics transaction.
11	**WhatsApp**	Standard Odoo Enterprise WhatsApp app with Meta-approved templates for receipts, order confirmations and customer messages, sent automatically where possible. Kitchen and delivery status messages reviewed with you case by case before anything is built.
12	**Payments**	Paymob online payments (Mada, Visa/Mastercard, Apple Pay as enabled on your account). Tabby and Tamara integration built by Code-ox. POS terminal integration for Geidea, NearPay and Paymob — Odoo 19 availability confirmed before you commit. Orders marked paid only on terminal or gateway confirmation; refunds to the original method where supported; failed payments retried or switched; all tested in UAT.
13	**ZATCA Phase 2**	Company, VAT, CR and address set up; each POS with its own invoice journal onboarded with ZATCA; compliance tests and switch to production just before go-live; one-tap default customer for walk-in sales; staff trained and ZATCA issues supported after go-live.
14	**UAT, Training & Go-Live**	Production-ready UAT environment on staging, UAT, training, data checks, fixes and a cutover rehearsal while Foodics stays live. Production go-live outside working hours, followed by 6 months of support under the SLA on page 10.

SOURCE CODE & OWNERSHIP

Tara Holding owns all custom code, held in your own repository with access granted to Code-ox — complete source, deployment instructions, migration scripts and technical, integration/API and configuration documentation. No dependency on any Code-ox proprietary licence. Third-party modules remain with their vendors.

DELIVERY AGGREGATORS

Code-ox Aggregator Hub vs UrbanPiper

UrbanPiper is used only to connect the delivery platforms. POS, Kitchen Display, inventory, manufacturing, payments, ZATCA and reporting run in Odoo itself and are identical in both options.

CRITERION	OPTION A — CODE-OX AGGREGATOR HUB	OPTION B — URBANPIPER
How it connects	Code-ox hub module inside your Odoo, connecting to each platform's own API.	Odoo's standard UrbanPiper connector — configuration only, no custom connector.
Platforms	All seven: HungerStation, Jahez (incl. Noon), Keeta, The Chefz, ToYou, Ninja and Mrsool. Any future platform: SAR 1,000 each.	Saudi coverage, including Keeta, confirmed by UrbanPiper in the joint meeting; an uncovered platform stays on its tablet or uses a direct integration.
API access	**Required from each platform.** Code-ox requests the API from each platform on Tara Holding's behalf, using each entity's merchant account; each platform is integrated once its API is issued. Timing sits with the platforms.	Platforms connected through UrbanPiper's onboarding process; store linking per UrbanPiper / Odoo.
Technical coverage	Orders into POS and Kitchen Display; menu, price, sold-out and status sync; cancellations and rejected orders — to the extent each platform's API allows.	Orders into POS and Kitchen Display; menu, availability and status sync through UrbanPiper. HungerStation orders cannot be rejected from Odoo POS.
Scalability	Brand > Branch > Platform Store > POS / Kitchen — a new brand, branch or store ID is added by configuration, without redevelopment, in both options.	
Settlement & reporting	Reporting by platform, brand and branch in both; reconciliation per the settlement plan.	
Maintenance & upgrades	Upgrade-safe module, source owned by Tara Holding; re-validated by Code-ox at each Odoo upgrade. Minor platform API changes included during the 6-month support, then under AMC.	Standard Odoo module maintained by Odoo; platform API changes handled by UrbanPiper. Dependent on the UrbanPiper subscription remaining active.
One-time cost Full Part 2 implementation	**SAR 40,000** — the complete Urban Eats / MYLK implementation, including the aggregator hub.	**SAR 30,000** — the complete Urban Eats / MYLK implementation, with aggregators via UrbanPiper.
Recurring cost	**None** — no per-branch fee.	Approx. **SAR 1,700–1,900 per branch per year**, paid through Odoo, rising with every branch added — we will share the exact figure once we receive confirmed pricing from the Odoo team.

CODE-OX RECOMMENDATION — OPTION A, CODE-OX AGGREGATOR HUB

Lower total cost of ownership. The SAR 10,000 difference equals roughly one year of UrbanPiper fees for 5–6 branches; after that Option A has no recurring fee, while UrbanPiper's cost grows with every branch.

Ownership, no middleware. The hub's source code is yours, in your repository, with no subscription in the order path.

Upgrade-safe. A separate, documented module on Odoo's standard POS, re-validated by Code-ox at each upgrade.

API ACCESS — HANDLED BY CODE-OX

Confirmed: HungerStation, Keeta and Jahez (incl. Noon) — APIs available and ready to connect with Odoo. **In progress:** The Chefz, ToYou, Ninja and Mrsool — API availability being confirmed with each platform.

Each platform issues its API to Tara Holding's merchant account. Code-ox requests these on your behalf, separately for each entity, and integrates each platform as soon as its API is received.

CONFIRMED TECHNICAL POINTS · 1 OF 2

Architecture & Delivery Platforms

Clarified with Tara Holding by email after the first issue of this proposal. **Everything on pages 6 and 7 is included in the quoted prices.**

A · BRAND, BRANCH & CHANNEL — BUILT ENTIRELY FROM STANDARD ODOO

DIMENSION	HOW IT IS REPRESENTED IN ODOO
Brand MYLK, Finjan, Shared	Analytic Plan "Brand" with one analytic account per brand. Separate POS product categories, pricelists and a website per brand. Standard analytic distribution models tag purchases, expenses and invoices to the right brand automatically, by product, category, supplier or account.
Branch = an outlet	One warehouse per outlet (stock and stock value per outlet). One POS configuration per outlet and brand, each with its own sales journal. Analytic Plan "Branch" with one analytic account per outlet, for expenses. Odoo's "Branches" feature, which creates child companies, is **not** used.
Channel no analytic plan needed	Delivery: one POS payment method per platform (a standard Odoo 19 option), each posting to its own clearing account, which also supports settlement reconciliation. Dine-in and takeaway: the standard POS order setting. Web: the website. B2B: a sales team.
Reporting all standard	Sales by brand, outlet and channel from POS and Sales reports; stock and stock value by outlet from inventory reports by warehouse; P&L by brand and outlet from the Analytic Report.

The structure itself needs no custom fields or modules. The one gap is POS revenue tagging, covered in B below.

B · POS REVENUE TAGGING — YOUR CHOICE, BOTH WITHIN THE PRICE

OPTION 1 · FULLY STANDARD

No module

Each POS has its own sales journal, so revenue per outlet and brand is visible in accounting by journal and in POS reports. Expenses are tagged through analytic accounts. Trade-off: the full P&L per outlet combines two standard reports rather than one.

OPTION 2 · SINGLE-REPORT P&L

One small, isolated module

Adds a Brand and Branch analytic field on the POS configuration and copies those tags onto the session's revenue lines when it closes — standard Odoo has no such field, and session entries are grouped. Uses standard inheritance, no core code changed; removing it does not affect POS. Reviewed at each upgrade (included); replaced by a maintained Odoo 19 module if one becomes available.

C · OPTION B — STANDARD URBANPIPER CONNECTOR, CONFIGURATION ONLY

Under Option B the delivery layer is Odoo's standard UrbanPiper connector. **Code-ox will not develop any custom connector.** Configuration covers UrbanPiper stores per outlet and brand, menu sync, store hours, a POS payment method per platform, and order routing to POS and Kitchen Display. We will demonstrate the connector on staging before go-live.

Notes: the UrbanPiper subscription per location and each platform's own account are billed directly to Tara Holding · Saudi platform coverage, including Keeta, is confirmed by UrbanPiper in the joint Odoo / UrbanPiper meeting; a platform not yet covered stays on its own tablet unless you choose a direct integration for it · HungerStation orders cannot be rejected from Odoo POS (rejection stays in the HungerStation app) · settlement uses standard Odoo accounting and file import.

CONFIRMED TECHNICAL POINTS · 2 OF 2

Upgrade Assurance, Archive & Loyalty

D · Upgrade validation for each of the six companies

- Before / after comparison on staging: Trial Balance; aged AR and AP; tax reports and fiscal configuration; stock valuation where applicable; open customer invoices and vendor bills.
- Key business flows and multi-company configuration, tested against a checklist agreed with your team.
- Every difference listed with its cause, including where Odoo 19 itself changes a calculation or presentation.
- **Production is upgraded only after your finance team signs off each company.**

E · Module-by-module upgrade register

- Every third-party and custom module, with its current function and Odoo 19 compatibility.
- Proposed treatment: retain, migrate, replace with standard Odoo, consolidate or retire.
- Licence or vendor cost, and upgrade risk, for each module.
- **No module changed or removed without your written approval.**

F · Complete Foodics historical archive

- Everything Foodics makes available through console exports, reports and API: sales and orders, payments, products, menus, modifiers and categories, customers, discounts, promotions, refunds, cancellations, inventory history, loyalty / gift-card balances, tax and financial reports, branch and store configuration.
- Readable, open formats (CSV / Excel and PDF reports), stored under Tara Holding's control.
- **Index and data dictionary**: each dataset, its period or date range, and what it contains.
- Foodics does not normally provide a full database backup; items such as loyalty or gift-card balances depend on what Foodics exposes, and any gaps are flagged at the start.

G · Odoo Loyalty, Promotions & Rewards

- Configuration of Odoo's standard Loyalty and Promotions for MYLK, plus a demonstration to your team.
- Points, redemption and rewards; percentage and fixed discounts; coupons and promo codes; Buy X Get Y and free products; gift cards and eWallet; POS and eCommerce programs with customer identification and balance at POS; validity, expiry and conditions by product, category, customer or amount; separate programs per brand.
- For each loyalty idea from management, we advise: standard Odoo, configuration, a supported third-party app, or custom development as a last option.
- Programs agreed during implementation, and advice on new ideas during the six-month support, are included; new programs after that fall under the AMC or a change request.

H · FUTURE EXPANSION — INDICATIVE RATES (FOR BUDGETING, NOT PART OF THE CURRENT SCOPE)

ITEM	INDICATIVE COST	COVERS
New branch / outlet	**SAR 2,000** per outlet	Warehouse, POS, Kitchen Display, ZATCA onboarding, UrbanPiper store setup and training. UrbanPiper charges apply per store ID.
New brand under Urban Eats	**SAR 600** per brand	Reporting setup, POS categories and pricelists, menu loaded from your completed template. UrbanPiper charges apply per store ID.
New delivery platform	**SAR 1,000** per platform	Custom aggregator route (Option A), where the platform grants API access. Under UrbanPiper, UrbanPiper's own charges apply.
AMC after six months	**20%** of the total project fee per year	Continued support with defined SLAs once the included six-month support ends.
Change requests & development	**USD 40** per hour	Approved changes and custom development, quoted in writing before work starts.

DELIVERY PLAN

Weekly Plan to 1 January 2027

Production-ready UAT environment committed for **1 December 2026**, keeping the whole of December for UAT, training, corrections and cutover preparation. Based on kick-off by 15 October 2026; Foodics data preparation runs in parallel throughout.

WINDOW	ACTIVITIES	MILESTONE
11 – 22 Oct Weeks 1–2	Kick-off; access and data handed over; written upgrade assessment; Urban Eats architecture document shared for approval.	Assessment & architecture approved
18 – 22 Oct Week 2	Backup and complete Odoo 19 upgrade on staging; Studio customisations and third-party modules migrated; data checks and functional testing.	Upgrade signed off on staging
25 Oct – 12 Nov Weeks 3–5	Urban Eats company, dimensions, warehouses and routes; access rules; product master, coding scheme, vendor lines and minimum stock rules.	Foundation configured
8 – 26 Nov Weeks 5–7	Central kitchen manufacturing, recipes and recipe kits, production plan screen, expiry and waste handling.	Kitchen flow ready
8 – 26 Nov Weeks 5–7	Restaurant POS and Kitchen Display per branch; payments (Paymob, Tabby, Tamara, terminals); ZATCA compliance setup; WhatsApp templates.	POS & payments ready
15 – 26 Nov Weeks 6–7	Delivery platform connections (Code-ox hub or UrbanPiper); menu, stock and status sync; settlement reporting — subject to platform approvals.	Platforms connected in test
29 – 30 Nov Week 8	Internal technical testing of the full solution, data migration loaded, fixes.	Internal testing complete
1 Dec 2026 Committed date	**Production-ready UAT environment available to your team on staging.**	**UAT environment live**
1 – 24 Dec Weeks 8–11	UAT, staff training, operational testing, data validation and corrections. Foodics stays live.	UAT acceptance
27 – 31 Dec Week 12	Cutover rehearsal, ZATCA production onboarding, physical stock count, final Foodics export.	Ready for cutover
1 Jan 2027 Committed go-live	**Production go-live — upgrade and cutover outside working hours; no new transactions on Foodics. Six months of support begins.**	**Go-live acceptance**

CONDITIONS FOR THE 1 DECEMBER AND 1 JANUARY DATES

Signed agreement and kick-off by 15 October; access and data provided within 5 business days of kick-off; timely UAT feedback; delivery platform approvals, which are outside Code-ox's control.

FINANCIALS

Investment & Payment

DELIVERABLE	AMOUNT (SAR)
PART 1 — FULL ODOO 18 → 19 UPGRADE	
Studio customisations, custom fields, views, reports, automations, server actions & access rules	2,700
Third-party modules — review, migration & testing	2,250
Part 1 Total — fixed	**SAR 4,950**
PART 2 — URBAN EATS / MYLK IMPLEMENTATION (SELECT ONE OPTION)	
Option A — Code-ox Aggregator Hub (all 7 delivery platforms)	40,000
Option B — Aggregators via UrbanPiper (UrbanPiper subscription billed separately, per branch per year)	30,000
Each additional delivery platform (Option A — future platforms beyond the seven listed)	1,000 each

** All amounts are exclusive of VAT. VAT (15%) is added to each invoice as per KSA regulations.*

PAYMENT SCHEDULE

MILESTONE	PART 1	OPTION A	OPTION B
Advance (40%) — on signing & kick-off	1,980	16,000	12,000
UAT acceptance (30%) — UAT environment accepted Part 1: upgrade signed off on staging	1,485	12,000	9,000
Go-live acceptance (30%) — production live	1,485	12,000	9,000
Total	**4,950**	**40,000**	**30,000**

THIRD-PARTY & RECURRING COSTS — NOT INCLUDED ABOVE

ITEM	BASIS
Odoo Enterprise subscription	Your existing Odoo subscription; please register Code-ox as implementation partner.
UrbanPiper (Option B only)	Approx. SAR 1,700–1,900 per branch per year, paid through Odoo. Indicative only — we will share the exact figure once we receive confirmed pricing from the Odoo team.
WhatsApp messages	Meta's message charges, paid directly to Meta. No third-party provider (BSP) expected.
Payment providers	Paymob, Tabby, Tamara and terminal provider fees, paid directly to each provider.
Third-party module licences	Listed in the written upgrade assessment before work starts and arranged by Code-ox directly with the vendors.

SUPPORT & SLA

6 Months Support — Included

PRIORITY	RESPONSE	FIX / WORKAROUND
Critical POS, payment, platform, order sync or ZATCA down	1 hour, 7 days a week, by phone or WhatsApp	4 hours, including Friday and Saturday
High	4 hours	1 business day
Normal	1 business day	3 business days

Standard hours Sunday–Thursday, 9:00–18:00 Riyadh time. Support runs for six months from go-live; afterwards it continues under an AMC with defined SLAs (20% of the total project fee per year, page 7).

Included in the 6 months

- Bug fixes and issue resolution for everything delivered in this proposal, within the SLA above.
- Configuration adjustments within the delivered scope — menus, prices, products, users, access, reports.
- Monitoring of the delivery platform and payment integrations, including order-sync failures.
- Minor platform / payment API changes needed to keep the delivered integrations working.
- Applying and testing vendor updates to third-party modules.
- ZATCA operational issues on the delivered POS and invoicing setup.
- How-to assistance for your staff; third-party issues escalated to the provider.

Billed separately, on evaluation

- **New branch rollout** — any branch opened after go-live needs its own system implementation: warehouse, locations and replenishment rules; POS and Kitchen Display setup with menus, pricelists and receipts; payment terminal pairing; ZATCA onboarding of the new POS; delivery platform store IDs mapped; user access; staff training and go-live support. Indicative SAR 2,000 per outlet (page 7).
- New features or modules not in this proposal.
- Custom requirements, enhancements or changes to agreed workflows.
- New integrations — additional delivery platforms, payment providers or third-party systems.
- Major platform API changes or a full API replacement.
- Odoo version upgrades, data re-migration or bulk data clean-up.
- Issues caused by changes made outside Code-ox, or by third-party services.

Each item is evaluated and quoted in writing — approach, effort, timeline and cost — and proceeds only on your approval.

ACCEPTANCE CRITERIA

- **Upgrade:** documented before / after validation signed off by your finance team for each of the six companies, and all agreed business flows pass on staging, before production is touched.
- **UAT:** the agreed UAT scenarios pass on staging with no open Critical or High issues.
- **Go-live:** production live on Odoo 19, POS selling, ZATCA invoices accepted, and orders flowing in from the connected platforms — with any remaining Normal issues listed and scheduled.

TERMS & CONDITIONS

Terms & Conditions

- **Scope & changes:** Scope is as set out on pages 3–7. Any change is agreed in writing, with its cost and timeline, before work starts.
- **Fees & payment:** Prices are fixed and exclusive of VAT (15%). Invoices are issued at the milestones on page 9 and are payable within 15 days.
- **Third-party costs:** Odoo subscription, UrbanPiper (Option B), WhatsApp, payment-provider and licence fees are paid directly to each provider, as listed on page 9.
- **Code-ox responsibilities:** Deliver to the weekly plan with regular progress updates, share design documents for approval, and hand over documentation to your team.
- **Tara Holding responsibilities:** Provide access, data and decisions within 5 business days of request, a nominated project owner, and timely UAT feedback.
- **Platform API access:** APIs are issued by each delivery platform. Code-ox requests them on Tara Holding's behalf for each entity's merchant account and integrates each platform as its API is received.
- **Timeline:** Dates follow the weekly plan on page 8. If a dependency outside either party's control shifts, revised dates are agreed in writing without penalty to either side.
- **Acceptance:** Per the criteria on page 10. Feedback is shared within 5 business days of each milestone; production go-live confirms acceptance of that milestone.
- **Ownership:** Tara Holding owns all custom code developed under this proposal, held in its own repository. Third-party modules remain under their vendors' licences.
- **Confidentiality & data:** Both parties keep each other's information confidential. Code-ox uses Tara Holding's data only for this project, and access can be revoked at any time.
- **Support:** Six months of support from go-live, as on page 10; thereafter an AMC is available at Tara Holding's option, at the rate on page 7.
- **Liability:** Each party's liability is limited to the fees paid under this proposal; neither party is liable for indirect losses.
- **Termination:** Either party may end the engagement with 30 days' written notice; work completed to that date is paid for and handed over.
- **Force majeure:** Neither party is responsible for delays caused by events beyond its reasonable control.
- **Law & validity:** Governed by the laws of the Kingdom of Saudi Arabia. This proposal is valid for 30 days from 4 October 2026.

AUTHORIZATION

Acceptance & Authorization

By signing below, both parties confirm acceptance of this financial proposal for the selected items and authorize the commencement of the project under the scope, timeline, payment schedule and terms set out above. All amounts are exclusive of VAT.
