

DESIGN & BUILD PROPOSAL · 27 SEPTEMBER 2026

The physiotherapy journey, from clinic to home, in one app.

A complete design-and-build proposal for the PhysioTrio mobile app — a patient app, a therapist & clinic operations layer, and an operations admin console. Built on PhysioTrio's existing digital foundation, with both clinic HMS platforms (Nixpend & Ecare) wired in natively and a full bilingual Arabic / English experience.

- Patient App iOS & Android
- Therapist & Clinic Operations
- HMS Nixpend & Ecare
- Bilingual AR / EN

PROPOSAL REF. COX-PT-2026-003	DATE 27 September 2026	CURRENCY SAR	PREPARED BY Code-Ox Technologies
----------------------------------	------------------------------	-----------------	--

01 · THE BRIEF

Project overview

PhysioTrio has asked us to build a **mobile app that digitizes the full physiotherapy patient journey** — from discovering a service, to booking an assessment, to following a treatment plan, tracking recovery and staying engaged afterwards. The app spans three audiences: the **patient**, the **therapist & clinic team**, and **operations administration**.

This is not a product designed from scratch. PhysioTrio's core digital platform already exists — a detailed 9-service catalogue, a 6-step booking flow, hospital-system routing, and a live AI chatbot with WhatsApp booking support. The app carries that same service structure, booking logic and integrations forward rather than reinventing them, which shortens the build and keeps the experience consistent with what patients already know. The app serves patients **kingdom-wide** — clinic-based and home-care — while routing each clinic booking to the correct hospital system — **Makkah on Nixpend, Riyadh on Ecare** — behind one seamless experience.

02 · OBJECTIVES

What this build sets out to achieve

One connected journey

Discover → Assess → Book → Treat → Recover → Maintain, delivered end to end inside a single app.

Extend, don't rebuild

Reuse PhysioTrio's existing booking flow, service catalogue and hospital-system routing rather than starting over.

Native HMS, no redirects

Therapist directory, availability, booking and payment all run inside the app — never a hand-off to the HMS's own screens.

Recovery beyond the visit

A guided exercise player, progress tracking and outcome charts extend the therapist's work into the days between sessions.

Arabic-first, bilingual

Full Arabic and English experience with RTL/LTR layout for the Saudi patient base.

Two systems, one experience

Makkah runs on Nixpend and Riyadh on Ecare — the app routes each booking to the right HMS automatically, invisibly to the patient.

03 · SCOPE

The patient app

Organised around PhysioTrio's own journey model, so the app reads the way the clinic already thinks about care.

DISCOVER NO LOGIN REQUIRED

COMPONENT	SCOPE DESCRIPTION
Service & Specialty Browse	All specialties and services with plain-language descriptions of the conditions treated, reconciled into one master list.
Location & Practitioner Directory	Browse clinic locations (Riyadh, Makkah) and kingdom-wide home care with a "nearest to me" option; practitioner profiles with credentials, specialisation and experience.
Packages & Home Care	Current packages/offers and the Home Care option shown alongside in-clinic services.

ASSESS & BOOK MOBILE NUMBER REQUIRED

COMPONENT	SCOPE DESCRIPTION
6-Step Booking Flow	Branch → service → practitioner → date/time → patient ID → OTP, mirroring PhysioTrio's existing booking flow.
Clinic vs. Home Toggle	Clinic or home-visit chosen at the service-selection step; home visits use a map-pin-first location.
Practitioner Gender Preference	Selectable gender filter — a hard guarantee where set, especially relevant to the Women's Health service line.
Insurance & Eligibility	Insurance selection with a coverage-verification status shown before payment, and a clear cash path if eligibility can't be confirmed.

TREAT ACTIVE TREATMENT PLAN

COMPONENT	SCOPE DESCRIPTION
Appointment Management	Confirmation, rescheduling and cancellation, with the applicable policy shown at the point of action.
Treatment Plan View	What the therapist has prescribed, in plain language.
Guided Exercise Player	Prescribed exercises with video demonstration, timer and a simple "how did that feel" check-in after each session.
Session History	A clear log of what was done and when.

03 · SCOPE — CONTINUED

Recovery, therapist ops & operations admin

PATIENT APP — RECOVER & MAINTAIN

COMPONENT	SCOPE DESCRIPTION
Progress Tracking	A visible recovery journey ("6 of 12 sessions complete") and rehab goals framed in real-life terms.
Outcome Charts	Simple before/after visuals (e.g. pain or mobility improvement since session 1) for motivation and package renewal.
Reassessment & Rebooking	Prompts at natural points in recovery; package/membership purchase and session-credit tracking.
Reminders, Ratings & Content	Push/SMS/WhatsApp reminders, post-visit ratings, and light educational content tied to the treated specialty.

THERAPIST & CLINIC OPERATIONS

COMPONENT	SCOPE DESCRIPTION
Schedule & Availability	Therapist schedule and availability management, per branch.
Session Documentation	Assessment, diagnosis/findings, treatment plan and progress notes entered by the therapist — feeding the read-only views patients see in the app.
Home-Service Routing	Home-service zone assignment and routing for home-visit bookings.
Package & Credit Tracking	Package and session-credit tracking per patient.

ADMIN & OPERATIONS MANAGEMENT

COMPONENT	SCOPE DESCRIPTION
Location & HMS Routing	Manage the Riyadh (Ecare) and Makkah (Nixpend) clinics and kingdom-wide home-care coverage, built to add further locations without rework.
Appointment Allocation	Allocation and load-balancing across branches and practitioners.
Packages & Policy Engine	Package management and a clear cancellation/rescheduling policy engine.
Patient Communication	Broadcast reminders and targeted follow-ups.
Reporting Dashboard	Bookings, digital booking %, conversion, new-patient acquisition, repeat bookings, package conversion, home-therapy utilisation, treatment-completion rate, retention and satisfaction.

04 · CLINICAL DATA MODULE

A genuine clinical layer, built for PDPL

This is the **fuller of the two clinical paths**. Rather than only displaying a read-only summary, v1 builds a true clinical data module inside the app — with the added security, access-control and data-protection work that storing real patient health records requires.

COMPONENT	SCOPE DESCRIPTION
Clinical Records	Initial assessment, diagnosis/clinical findings, treatment plan, session notes and rehab goals captured and stored as structured clinical data.
Role-Based Access Control	Therapist, clinic-admin and patient roles with least-privilege access to clinical records.
PDPL Compliance	Consent capture, audit logging, encryption in transit and at rest, and data-subject controls aligned to Saudi PDPL for health data.
Patient-Facing Summary	Patients see a simplified, plain-language view of their own record — what was done and what's next.

05 · INTEGRATIONS

How the app connects

- HMS** — native API, no redirect; routes Makkah→Nixpend, Riyadh→Ecare
- Payment** — net-new in-app checkout (Mada/Visa/Apple Pay/Tabby/Tamara)
- WhatsApp** — reuse the existing chatbot/WhatsApp integration
- SMS & Push** — new for the app, uses existing OTP/SMS infrastructure
- GA4 & Maps** — standard analytics; branch finder & home-service coverage map

DEPENDENCY & RISK — CONFIRM BEFORE BUILD

Because nothing hands off to an HMS's own UI, every HMS-touching screen is built against the HMS API. Confirm up front that **both Nixpend and Ecare** expose a **therapist/availability API**, a **booking-write API**, and a **payment API / gateway-token flow**. If any of these isn't available on either system, it is a scope and timeline risk. **Should Ecare not expose the required APIs, Code-Ox will deliver a basic version of the Riyadh integration from our side** so the app still launches on schedule. The Nixpend side shares its integration approach and adapter layer with the Vitality app.

06 · EXPERIENCE DIRECTION

Patterns worth adopting

Informed by a hands-on walkthrough of the client-referenced Meena Health app — we take the ideas, not the execution.

- **Map-pin-first home visits** — home-visit booking opens on "pin your location" as step one, before date, time or provider — the primary way to set a visit location, not a fallback behind saved addresses.
- **Insurance eligibility with an honest cash fallback** — check the moment a payer is selected; if coverage can't be confirmed, offer "continue as cash" rather than dead-ending the booking.
- **Clear clinic-vs-home entry points** — keep "book a clinic session" and "book a home visit" as distinct paths rather than one combined search.
- **Telehealth — optional add** — a single virtual follow-up option (e.g. reviewing home-exercise progress) could reuse most of the in-clinic booking flow; flagged as an optional addition, not part of v1.

07 · SUCCESS METRICS

How we'll measure it

Acquisition & booking

- App downloads
- Digital booking %
- Booking conversion
- New patient acquisition

Retention & value

- Repeat booking & package conversion
- Home-therapy utilisation
- Treatment-completion rate
- Retention, satisfaction, revenue per patient

Recommended addition: booking mix by specialty and by clinic-vs-home — an operational signal for staffing and marketing, not a vanity metric.

TECHNOLOGY STACK

Mobile App

Flutter — single codebase, native iOS & Android.

Backend & API

NestJS — Node.js API and HMS integration layer.

Admin Dashboard

Next.js — React web dashboard for ops & reporting.

08 · INVESTMENT

Your investment

COMPLETE APP DESIGN & BUILD — FULL V1

Patient app (iOS & Android), therapist & clinic operations, operations admin, clinical data module, native HMS integration (Nixpend & Ecare), QA & go-live — designed, built, tested and launched.

₹ 47,500

one-time project fee · exclusive of VAT

PAYMENT SCHEDULE

MILESTONE	%	AMOUNT (₹)
Advance — on sign-off & kickoff	50%	₹ 23,750
Final — on UAT completion & go-live	50%	₹ 23,750
Total	100%	₹ 47,500

Exclusive of VAT. VAT (15%) will be added to each invoice as per KSA regulations. Milestone split shown is indicative and confirmed at contracting.

THIRD-PARTY COSTS — CLIENT RESPONSIBILITY

HMS API access for both Nixpend and Ecare and any HMS-side fees, app-store developer accounts, SMS/notification and payment-gateway charges are **not included** and are borne directly by PhysioTrio / Burjeel Holdings. Server hosting is managed by Code-Ox.

SUPPORT & MAINTENANCE

3 months of complimentary post-launch support are included from go-live. An annual maintenance contract at **15% of the project fee — ₹ 7,125 / year** applies thereafter, billed separately and renewable.

09 · TIMELINE

Indicative schedule — 10 weeks

Design and development run to a **10-week** schedule. The plan below is **indicative**: actual timing depends on HMS API readiness (Nixpend & Ecare), feedback turnaround and scope confirmation at kickoff, and stages may overlap. The 10-week window assumes the HMS API dependency (§05) is confirmed at kickoff.

PHASE	DURATION
1 • Discovery & Design Master specialty list, journey/UX design, HMS API confirmation (Nixpend & Ecare), architecture sign-off	Weeks 1–2
2 • Core Build & Integration Booking flow, clinical data module, native HMS integration (Nixpend & Ecare), payment, notifications	Weeks 3–7
3 • App UI — iOS & Android Patient app, therapist/clinic ops, admin console, bilingual AR/EN	Weeks 6–9
4 • QA & Go-Live Testing, UAT support, store submission, production deployment & handover	Weeks 9–10
Indicative total	10 weeks

10 · ASSUMPTIONS & DEPENDENCIES

- **HMS APIs** — both Nixpend (Makkah) and Ecare (Riyadh) expose therapist/availability, booking-write and payment APIs; confirming this is a hard dependency for go-live and for finalising the timeline.
- **Client-provided access** — PhysioTrio provides Nixpend and Ecare API access and credentials from kickoff.
- **Specialty master list** — the BRD's 8 specialties are reconciled with the existing 9 service lines into one agreed list.
- **Home-service zones** — exact home-service zone boundaries per branch are confirmed at discovery.
- **Gender-preference filtering** — practitioner gender-preference filtering is included and confirmed (recommended, especially for Women's Health).

11 · TERMS & CONDITIONS

Terms & conditions

- 1 Scope.** Work is limited to the scope set out in this proposal. Features outside this scope — including telehealth and future phases — are quoted and agreed separately.
- 2 Fees & payment.** The project fee is ﷲ 47,500 exclusive of VAT, payable per the milestone schedule set out above.
- 3 Responsibilities.** PhysioTrio provides Nixpend and Ecare API access and credentials, and timely feedback and testing access within agreed deadlines. Code-Ox commits to regular progress updates, early flagging of dependencies, and delivery to the agreed scope. Timelines assume reasonable, timely input from both parties; delays on either side are handled by mutual agreement.
- 4 Third-party costs.** HMS APIs (Nixpend & Ecare), app-store, SMS/notification and payment-gateway charges are not included and are PhysioTrio's responsibility, billed directly by those providers. Server hosting is managed by Code-Ox.
- 5 Intellectual property.** On receipt of full payment, all custom code and deliverables become PhysioTrio / Burjeel Holdings' property. Third-party libraries remain under their own licences.
- 6 Data protection.** Clinical data handling follows Saudi PDPL. PhysioTrio is the data controller; Code-Ox acts as processor for the build and agreed support scope.
- 7 Support & maintenance.** 3 months of complimentary support from go-live; an annual maintenance contract thereafter at **15% of the project fee (SAR 7,125) per year**, billed separately and renewable by agreement.
- 8 Confidentiality, law & validity.** Both parties keep this proposal confidential. Governed by the laws of the Kingdom of Saudi Arabia. Valid for 30 days from the date of issue.

12 · NEXT STEPS

Getting started

- 1 A short scope conversation** to confirm the clinical-data path, the specialty master list and home-service zones.
- 2 Confirm the HMS API dependency** — therapist/availability, booking-write and payment APIs on both Nixpend and Ecare.
- 3 Kick off** — on the signed proposal and advance payment, we begin discovery and design.
