

Odoo Enterprise ERP Implementation

One connected system to run Saudi Fiberglass Factory — sales, purchasing, warehouse, the GRP production floor, quality, finance, payroll and Saudi tax compliance. Configured around SAUFICO's own products, customers and materials.

OVERVIEW

Executive Summary

Code-Ox Technologies is pleased to submit this commercial proposal for a full **Odoo Enterprise ERP implementation** for Saudi Fiberglass Factory (SAUFICO) — one system covering your entire operation, from the first sales enquiry through purchasing, the warehouse, the GRP production floor, quality control, finance and payroll.

The system is configured specifically for SAUFICO's business — **your GRP/FRP products, your raw materials, your production process and your market**. This proposal sets out the scope, timeline and terms to deliver it into daily use across every department, from the first sales enquiry through to a compliant invoice.

THE MOST IMPORTANT POINT UP FRONT — ONE SYSTEM FOR THE WHOLE OPERATION

Standard bookkeeping software records what already happened — invoices, ledgers, VAT returns. It has no concept of a bill of materials, a work order, a production machine, a quality check or a sales pipeline. None of SAUFICO's factory floor — resin mixing, filament winding, curing time, machine output — can be planned or tracked there at all.

Odoo runs that entire operational half of the business — the sales pipeline, the raw-material and finished-goods stock, the GRP production floor, the quality process and your Saudi compliance — with full accounting built in as one connected piece of the same system. Instead of separate tools that don't talk to each other, SAUFICO gets a single source of truth from the first sales enquiry to the final invoice.

Prepared For

Saudi Fiberglass Factory (SAUFICO)
GRP / FRP fiberglass manufacturer
Third Industrial City, Dammam, KSA
VAT 310006455800003

Scope

Odoo 19 Enterprise · CRM, Purchasing, Inventory, Manufacturing, Quality, PLM, Finance, HR/Payroll, ZATCA e-invoicing · 4 users · training · go-live support · 4 months complimentary support

Delivery

One fixed project, full scope, completed in roughly 30–40 days. Single one-time implementation charge.

WHY THIS MATTERS NOW — A LEGAL DEADLINE, NOT JUST AN UPGRADE

Saudi Arabia legally requires every VAT-registered business to issue electronic invoices through ZATCA's **Fatoora** system, and Phase 2 (system integration with ZATCA) is being rolled out to businesses in waves. This is a compliance obligation with a fixed deadline, not an optional feature — and it is the single most time-sensitive item in this proposal. Section 8 covers it in full.

A FIT FOR YOUR BUSINESS

Built for a fiberglass factory

Odoo covers the full operation of a GRP / FRP manufacturer out of the box — every area below is a standard capability of the system, not a custom build. During implementation these are set up with SAUFICO's own products, materials, customers and processes. The following pages show, area by area, exactly what that means for SAUFICO.

PRODUCTS & PRICING

GRP pipe (sold by the metre), **GRP sectional water tanks**, chemical & sewerage tanks, fittings, FRP grating panels and installation services — each priced correctly, by metre or by unit.

RAW MATERIALS

Resins, catalysts, accelerator, E-glass mat, woven & continuous roving, gelcoat, fire-retardant filler, hardware and gaskets — tracked in the right units (kg, m, L), as the real inputs to GRP production.

PRODUCTION PROCESS

Full routings — **filament winding → curing → trimming/finishing** — across work centres for every GRP method SAUFICO uses: hand lay-up, hot press, pultrusion, spray-up, hydrostatic testing and more.

CUSTOMERS & PIPELINE

A sales pipeline built for SAUFICO's market — oil & gas, desalination, water-authority and construction customers — from first enquiry through to quotation and won order.

SUPPLIERS

Resin & chemicals, composite materials and hardware vendors, with purchase orders, blanket agreements and an on-time-delivery scorecard to manage supply.

SAUDI COMPLIANCE

15% VAT, monthly tax returns, a **Zakat** journal and Saudi payroll (WPS) — the compliance layer a Saudi manufacturer needs, built in as standard.

THE BOTTOM LINE

Because Odoo already understands how a fiberglass factory works, the implementation is about fit, not invention. The work in this proposal is to **load SAUFICO's real data, configure each area around your actual operation, finish the Saudi-specific setup, and train your team** — so the system reflects exactly how SAUFICO runs.

SCOPE OF WORK

The full module suite for SAUFICO

Your Odoo Enterprise subscription unlocks **every Odoo application** — not a limited bundle. This implementation configures the modules below around how SAUFICO actually runs. Each is detailed, module by module, on the pages that follow.

SELL & WIN WORK

- ✓ **CRM & Sales** — pipeline, quotations, e-sign, price lists

BUY & STORE

- ✓ **Purchasing** — RFQs, vendor scorecards, blanket orders
- ✓ **Inventory** — stock, lot traceability, barcode

MAKE (THE CORE DIFFERENCE)

- ✓ **Manufacturing** — recipes, work centres, shop floor
- ✓ **Quality** — inspection checks & certificates
- ✓ **Engineering changes** — controlled formula/spec updates

FINANCE & COMPLIANCE

- ✓ **Accounting** — VAT, Zakat, lease accounting, costing
- ✓ **ZATCA e-invoicing** — Fatoora Phase 2 (legal)

PEOPLE

- ✓ **HR & Payroll** — Saudi WPS & GOSI, Iqama reminders
- ✓ **Time Off & Expenses** — leave and staff claims

ACROSS EVERYTHING

- ✓ **Dashboards** — live KPIs across every department
- ✓ **Documents** — COAs, test certs & files on the record

A NOTE ON JARGON

This proposal uses a few unavoidable technical terms. In plain words: **BoM** = the recipe of materials for a product; **work centre** = a machine or station on the floor; **lot traceability** = being able to trace a finished tank back to the exact resin batch it was made from; **WPS** = the government system for paying salaries; **Zakat** = the Saudi statutory levy administered by ZATCA; **ZATCA / Fatoora** = the tax authority's electronic-invoicing system.

DETAILED SCOPE · 1 OF 3

Sales, Purchasing & Warehouse

For each area: what the system is already configured to do, and the concrete steps to take it live on SAUFICO's real data.

AREA	WHAT WE DELIVER TO GO LIVE
1 · CRM & SALES PIPELINE — What it does: multi-stage sales pipeline, quote-to-order with e-signature, pro-forma invoicing, and multi-unit pricing (pipe by the metre, tanks & fittings by unit) under one SAR price list	
Sales team & rules	Set up SAUFICO's real salespeople, targets, approval limits and lead-assignment rules.
Customer database	Load SAUFICO's real customers and contacts across oil & gas, water and construction.
Quotation templates	Branded quotation templates per product line (pipes, tanks, fittings, installation) with standard terms and scope wording.
Pipeline reporting	Win-rate and pipeline value by sector, plus lost-reason tracking, so management can see the funnel at a glance.
Optional — online deposit	Let customers pay a deposit online to confirm an order, removing the manual bank-transfer step.
Training	Hands-on training for the sales team and sales manager on running the pipeline day to day.
2 · PURCHASING & VENDOR MANAGEMENT — What it does: RFQ-to-bill purchasing, blanket (repeat) orders, receipt reminders and an on-time-delivery vendor scorecard	
Approved vendor list	Load every resin, glass, catalyst and hardware supplier with pricing, lead times and minimum order quantities.
Automatic reordering	Set minimum stock levels per material so purchasing is triggered automatically, not from memory.
Three-way matching	Match purchase order ↔ goods received ↔ supplier bill, so SAUFICO never pays for goods it did not receive.
Approval thresholds	Purchase sign-off rules above a chosen order value, if management wants them.
Training	Purchasing officer trained on the full request-to-bill flow and vendor performance reports.
3 · INVENTORY & WAREHOUSE — What it does: multi-step receiving→QC→storage→delivery flow, full lot/serial traceability, barcode scanning, landed costs, and stock in the right units (kg, m, L)	
Opening stock	Verify and load accurate opening balances for every raw material and finished good, so stock is right from day one.
Warehouse layout	Map and label the plant's storage locations (raw material store, work-in-progress, finished goods, quality hold) inside Odoo.
Reorder & safety stock	Set reorder points per material based on real consumption rates.
Barcode roll-out	Deploy barcode scanning on the floor; train the warehouse supervisor and store staff.
Landed costs	Decide how import duty and freight on resin/glass shipments are added to stock value.

DETAILED SCOPE · 2 OF 3

Manufacturing, Quality & Engineering

This is the core of what SAUFICO cannot run today — turning raw materials into finished, quality-assured GRP products with a controlled, costed process. It is the clearest value the new system brings.

AREA	WHAT WE DELIVER TO GO LIVE
4 · MANUFACTURING & SHOP FLOOR — What it does: material recipes (BoMs) with timed routings, work centres costed per hour with efficiency/OEE targets, and a tablet shop-floor screen for operators to log progress	
Complete product recipes	Build verified material recipes (BoMs) and routings for every product SAUFICO makes — the base configuration covers pipe, tanks and panels; gratings, fittings, manholes and other lines get their own.
Real capacities & costs	Confirm true work-centre capacities, shift patterns and cost per hour with production management.
Stock & production tied together	Link opening stock and reorder rules so production orders always have their materials ready — no stalls on the floor.
Shop-floor tablets	Set up the tablet screens on the actual line; train production staff and the production manager.
Subcontracting & scrap	Decide whether to switch on outsourced steps (subcontracting) and offcut/scrap tracking — both available.
5 · QUALITY MANAGEMENT — What it does: pass/fail quality control points built into receiving — e.g. an incoming-resin check requiring a Certificate of Analysis before stock is accepted	
Full set of checks	Define all the checks SAUFICO needs: incoming (resin, glass, hardware), in-process (cure time/temperature, wall thickness) and outgoing (hydrostatic pressure test, visual) before a tank or pipe ships.
Checklists & documents	Attach checklists, tolerances and required certificates (COA, test certs) to each check.
Quality alerts	A failed check automatically flags the batch and notifies the Quality inspector.
Training	Quality team trained on logging checks and raising non-conformance alerts.
6 · ENGINEERING CHANGE CONTROL (PLM) — What it does: controlled engineering change orders linked to the affected recipe — e.g. switching a tank's resin to vinyl-ester for better chemical resistance, with approval and version history	
Approval flow	Define who proposes, reviews and signs off a formula or spec change before it reaches production.
Change history	Load recent real formulation changes as a starting history.
Training	Light training for the production manager on raising and approving changes.

WHY THIS IS THE HEADLINE VALUE

Every desalination or chemical-industry customer that asks SAUFICO for a spec change, a pressure certificate, or proof of which resin batch went into their tank is asking for something bookkeeping software simply cannot answer. This is where Odoo pays for itself.

DETAILED SCOPE · 3 OF 3

Finance, Payroll & Expenses

Full accounting built into the same system as the factory floor — with SAUFICO's existing financial data carried forward, not re-keyed.

AREA	WHAT WE DELIVER TO GO LIVE
7 · ACCOUNTING, TAX & COMPLIANCE — What it does: 15% VAT, monthly returns, Zakat journal, IFRS-16 lease accounting, automatic stock valuation (AVCO), margin/analytic analysis and AI bill scanning	
Migrate existing accounts	Import SAUFICO's chart of accounts, opening balances and open invoices/bills from the current system into Odoo — no re-keying.
Bank setup	Confirm bank accounts and reconcile balances.
Costing explained	Stock value updates automatically as materials move (average-cost method, "AVCO"), so the balance sheet always reflects real inventory worth.
Management reports	Recurring reports — profit by product line, cash flow, VAT return, Zakat computation — giving finance far more visibility than a standalone bookkeeping tool.
Training	Finance team trained on daily bookkeeping, VAT filing and month-end close.
8 · HR, PAYROLL & TIME OFF — What it does: employee records by department, Saudi payroll with WPS fields & Iqama-expiry reminders, and skills/certification tracking (forklift, hydrostatic testing, resin handling)	
Complete WPS setup	Finish the Saudi Wage Protection System setup (establishment bank details and codes) so compliant salary payments can run.
Employee master data	Load contracts, salary structures, GOSI numbers and bank details for salary transfer.
Leave policy	Configure leave types and approval chains matching SAUFICO's HR policy.
Parallel payroll run	Run one payroll cycle alongside the current method before switching over, to confirm salary files are correct.
Training	HR/payroll administrator trained end to end.
9 · EXPENSES & BARCODE — What it does: employee expense claims with approval routing (travel, fuel, meals, mileage, communications); barcode scanning across inventory & production	
Expense policy	Confirm approval limits and reimbursable categories, and adjust accordingly.
Barcode hardware	Procure and configure scanners/printers for the warehouse and shop floor where needed.
Training	Short sessions for staff submitting expenses and staff using barcode scanning.

PRIORITY DELIVERABLE

ZATCA e-Invoicing (Fatoora) — the deadline item

Saudi law requires every VAT-registered business to issue invoices electronically through ZATCA's Fatoora system. **Phase 1** requires structured electronic invoices with a QR code. **Phase 2** requires the invoicing system itself to be connected to ZATCA — invoices are electronically stamped, given a unique ID, and either cleared by ZATCA in real time (business-to-business) or reported within 24 hours (cash/counter sales). ZATCA is bringing businesses into Phase 2 in waves.

WHY WE FLAG THIS FIRST

Unlike every other item in this proposal, ZATCA e-invoicing carries a **legal deadline set by the tax authority — not by the project plan**. SAUFICO should confirm which wave applies to it (from its ZATCA notification letter or directly with ZATCA), as that fixes the go-live date for this piece. It is a distinct compliance integration, scoped and tracked as its own deliverable.

STEP	WHAT WE DELIVER
Confirm the deadline	Establish SAUFICO's ZATCA Phase 2 wave and integration date, so this go-live is fixed rather than open-ended.
Activate the module	Configure Odoo's official ZATCA-compliant e-invoicing add-on — standard configuration, not a custom build.
Onboard with ZATCA	Generate SAUFICO's security credentials with ZATCA (test, then production).
Automatic compliant invoices	Set up invoice numbering, QR codes, invoice linking and the required electronic format so every invoice and credit note is compliant automatically — no manual step for staff.
ZATCA testing	Run ZATCA's mandatory test batch (standard, simplified, credit and debit notes) before switching on live integration.
Go-live & training	Confirm real-time clearance for B2B and 24-hour reporting for any counter sales; train finance on the (minimal) day-to-day change and how to handle a rejection.

IN PLAIN TERMS

Once configured, nothing changes for your team's daily routine — invoices are created exactly as before. The system quietly does the legal part in the background. The value is that SAUFICO stays fully compliant with no manual effort and no risk of penalties.

ALSO INCLUDED

Everything needed for a clean go-live

These items sit behind the screens rather than on them, but they are essential for a real launch. We list them openly and up front, so there are no surprise change requests later.

ITEM	WHAT IT COVERS
Accounts data migration	Chart of accounts, opening balances and outstanding customer/vendor invoices carried over from SAUFICO's existing system.
Opening stock take	A structured count and data entry for all raw materials and finished goods, so inventory is accurate on launch day.
WPS banking details	The establishment bank details and codes required to run compliant Saudi payroll.
User roles & access	Access rights per department, so each team sees and does exactly what it should.
Company branding	SAUFICO logo, layout and footer terms on quotations, invoices and delivery notes.
Department training	Hands-on training sessions for Sales, Purchasing, Warehouse, Production, Quality, Finance and HR.
Go-live support	A dedicated support window at launch.
4 months complimentary support	Bug fixes and configuration adjustments on every module, at no extra cost, for 4 months after go-live.

ONE COMBINED EFFORT

All of the above is included in the single implementation charge and delivered within the one 30–40 day project — not billed piecemeal as the project runs. SAUFICO sees the full picture before starting.

DELIVERY PLAN

One project, delivered in 30–40 days

This is a single, fixed implementation — **the whole system delivered end to end in roughly 30–40 days**, not a drawn-out or open-ended programme. The work runs as four overlapping streams so different parts of the setup progress in parallel and the go-live date stays tight. All of it is included in the one implementation charge.

≈ 30–40 days from kickoff to go-live — the complete system, delivered as one fixed project.

READING THE TIMELINE

The four streams **overlap on purpose** — finance setup runs alongside the production build rather than waiting for it — which is how the whole system lands in roughly 30–40 days instead of running end to end. It is one fixed project for one charge, not a staggered or part-by-part rollout. Day ranges are indicative and confirmed at planning.

INVESTMENT

Commercial summary

Your total spend has three parts: a one-time **implementation charge** (Code-Ox), the recurring **Odoo licences** (paid to Odoo), and the recurring **server / hosting**.

IMPLEMENTATION CHARGE — SAR 21,000 (ONE-TIME)

The complete implementation — the entire scope in this proposal — is delivered for a one-time charge of **SAR 21,000**. This is a fixed fee, paid once — not annual and not recurring. Odoo licences and hosting are separate recurring costs, shown further down and paid by SAUFICO directly to the respective providers.

1

ONE-TIME

Implementation charge — full scope

WHAT THE IMPLEMENTATION COVERS	STATUS
Setup & Foundation Company setup, CRM & Sales, Inventory	Included
Production Floor Manufacturing, Quality, Engineering change control	Included
Finance & Compliance Accounts migration, VAT/Zakat, ZATCA e-invoicing	Included
People, Training & Go-Live Payroll/WPS, Time Off, Expenses, training, go-live	Included
4 months complimentary support Bug fixes and configuration adjustments on every module, at no extra cost, for 4 months after go-live	Included
Complete implementation — full scope, one-time	SAR 21,000

A single one-time implementation charge of **SAR 21,000** covers the full scope end to end — paid once, not annual and not recurring. The whole project completes in roughly 30–40 days, and includes **4 months of complimentary support** after go-live.

INVESTMENT · PART 2

Odoo Enterprise user licences

The recurring licence cost, sized for SAUFICO's **4 users** on the Odoo Custom plan. Paid annually to Odoo, with a first-year discount on Year 1.

2

RECURRING

Odoo Enterprise user licences — 4 users

ODOO CUSTOM PLAN — 4 USERS	RATE / USER / MO	MONTHLY (4 USERS)	ANNUAL (4 USERS)
Year 1 — with first-year discount Odoo's standard first-year initial discount on the Custom plan.	\$20.40 ≈ SAR 77	\$81.60 ≈ SAR 306	\$979 ≈ SAR 3,672
Year 2 onward — standard rate List price after the first-year discount ends.	\$25.50 ≈ SAR 96	\$102 ≈ SAR 383	\$1,224 ≈ SAR 4,590

FOR REFERENCE — COST PER SINGLE USER (ODOO CUSTOM)	MONTHLY	ANNUAL
1 user — Year 1 (discounted)	\$20.40 ≈ SAR 77	\$244.80 ≈ SAR 918
1 user — Year 2 onward	\$25.50 ≈ SAR 96	\$306 ≈ SAR 1,148

Each additional user adds ≈ SAR 918 in Year 1 and ≈ SAR 1,148 per year thereafter. Prices per Odoo's Saudi Arabia pricing (US\$); SAR indicative at 3.75, confirmed at subscription. Licences are paid by SAUFICO directly to Odoo, not invoiced by Code-Ox.

WHY THE CUSTOM PLAN

SAUFICO's operation spans manufacturing, quality, PLM and Saudi compliance, so we recommend **Odoo Custom** — it unlocks all apps plus **Odoo Studio, external API access and multi-company**, giving room to tailor the shop-floor screens and connect ZATCA and barcode hardware cleanly. Billed annually; the first-year discount applies to Year 1 only. Server and hosting options are on the next page.

INVESTMENT · PART 3

Server & hosting options

Odoo needs a server to run on. Following the discussion, the two recommended options are below — Odoo's own fully-managed cloud, or a lower-cost cloud server that Code-Ox sets up and maintains for you. Both comfortably run a 4-user Odoo instance. Hosting is charged per instance, not per user.

OPTION	MANAGED BY	≈ MONTHLY	≈ ANNUAL
Odoo.sh RECOMMENDED Odoo's own cloud platform — fully managed	Odoo	≈ SAR 330 (\$88.00)	≈ SAR 3,960 (\$1,056)
LightNode VALUE Self-host VPS · 8 GB · Middle-East region	Code-Ox	≈ SAR 115 (\$30)	≈ SAR 1,350 (\$360)

ODOO.SH PRICE BREAKDOWN (ODOO · SAUDI ARABIA)

1 worker **\$57.60/mo** + 80 GB storage **\$16.00/mo** (at \$2.40/GB/yr) + 1 staging branch **\$14.40/mo** = **\$88.00 / month** (\$1,056 / year). Storage is sized at 80 GB for this project. Charged per instance — the same for 4 users as for 1.

ALL-IN MONTHLY FOR 4 USERS (LICENCE + HOSTING)	YEAR 1	YEAR 2+
Odoo Custom × 4 + Odoo.sh Recommended setup	≈ SAR 636 / mo \$169.60	≈ SAR 713 / mo \$190.00
Odoo Custom × 4 + LightNode Value setup	≈ SAR 419 / mo \$111.60	≈ SAR 495 / mo \$132.00

This is the recurring monthly spend for 4 users — licences plus hosting. The **SAR 21,000 implementation is a separate one-time fee**, not included above. Full year-by-year totals on the next page.

OUR RECOMMENDATION

1st choice — Odoo.sh. The safest, most robust option: **automatic backups replicated across multiple regions, direct support from Odoo**, and a platform **fully optimised for Odoo** (upgrades, staging and monitoring handled for you). Because data is backed up across multiple regions, a problem in any single data-centre never puts it at risk — protection a single self-hosted server cannot match. For business-critical manufacturing data, the modest premium is worth it.

2nd choice — LightNode. If cost is the priority, LightNode is the best-value alternative — a low-latency Middle-East VPS set up and maintained by Code-Ox. Both run Odoo Enterprise fully.

Hosting fees are paid to Odoo (Odoo.sh) or the VPS provider, billed in USD; SAR indicative at 3.75, confirmed at provisioning.

INVESTMENT · SUMMARY

What you'll actually spend

Putting it together for **4 users on the Odoo Custom licence**. The only variable is the hosting choice — the two recommended options are shown. Year 1 includes the one-time implementation and the discounted first-year licence; from Year 2 you pay licence (standard rate) and hosting only.

FIXED COST LINES (4 USERS, ODOO CUSTOM)	YEAR 1	YEAR 2+ / YEAR
Implementation (Code-Ox) Full ERP setup, training, 4-months support	SAR 21,000 one-time only	— not recurring
Odoo Custom licences × 4 Paid to Odoo · Yr1 discounted, renews at standard	≈ SAR 3,672	≈ SAR 4,590
	≈ SAR 24,672	≈ SAR 4,590

+ HOSTING CHOICE → YOUR TOTAL	HOSTING / YR	YEAR 1 TOTAL	YEAR 2+ / YR
Odoo.sh — fully managed RECOMMENDED 80 GB · multi-region backups · Odoo support	≈ SAR 3,960	≈ SAR 28,632	≈ SAR 8,550
Self-host — LightNode VALUE 8 GB VPS, ME region · Code-Ox managed	≈ SAR 1,350	≈ SAR 26,022	≈ SAR 5,940

Year 1 = one-time implementation (SAR 21,000) + first-year licences (discounted, 4 users) + one year of hosting. Odoo Custom renews from Year 2 at the standard rate (≈ SAR 4,590/year for 4 users). Licence and hosting are paid by SAUFICO directly to Odoo / the hosting provider. Figures are indicative at SAR 3.75 to the US dollar and confirmed at subscription/provisioning. Each added or removed user changes only the licence line (≈ SAR 918/user in Year 1, ≈ SAR 1,148/user/year thereafter).

DELIVERY & TERMS

How we deliver & payment terms

P

PAYMENT

Payment schedule

MILESTONE	%	AMOUNT (SAR)
On acceptance / project kickoff	50%	SAR 10,500
On go-live	50%	SAR 10,500
Implementation total	100%	SAR 21,000

A simple 50% on kickoff and 50% on go-live split of the SAR 21,000 implementation charge. Odoo licence and hosting are paid by SAUFICO directly to the respective providers.

A

ASSUMPTIONS & EXCLUSIONS

Key project assumptions

- ☐ SAUFICO provides master data — chart of accounts, product recipes, approved vendor list, customer contacts, employee details — within an agreed window at project kickoff.
- ☐ Odoo Enterprise licences (4 users, Custom plan) are purchased by SAUFICO directly from Odoo before implementation begins.
- ☐ Server / hosting cost is paid by SAUFICO to the chosen provider; the option is confirmed at kickoff.
- ☐ ZATCA e-invoicing configuration assumes SAUFICO's ZATCA/VAT registration is in order; SAUFICO confirms its Phase 2 wave and deadline. The registration itself is out of scope.
- ☐ Barcode scanners/printers and shop-floor tablets are procured by SAUFICO where not already available; Code-Ox advises on specification.
- ☐ The full scope is delivered as one fixed project. This proposal is valid for **30 days** from the date of issuance.

AUTHORIZATION

Acceptance & Authorization

By signing below, both parties confirm acceptance of this commercial proposal for the Odoo Enterprise ERP implementation for Saudi Fiberglass Factory (SAUFICO) and authorize commencement under the scope, phasing and payment terms set out above.
