1 Project overview

Code-Ox will take QAF Roasteries from a partly configured Odoo 19 demo to one live system that runs the roastery, the cafés, the online store, wholesale and the books. The work is split into seven phases so QAF can approve and pay by phase.

LINE	WHAT IT IS TODAY	WHERE IT WILL RUN
Roastery	Green beans roasted and packed in Al-Khobar	Odoo Manufacturing + Inventory
Cafés	7 branches listed online (Khobar 3, Riyadh 3, Dammam 1), about 10 in total incl. Jubail and hospital sites	Odoo Point of Sale (Restaurant)
Online store	qafcoffee.com on Salla, Arabic/English	Odoo eCommerce (or Salla connected to Odoo, see option B)
Wholesale (B2B)	Orders by email and WhatsApp	Odoo Sales + B2B customer portal
Franchise	5-year programme, 9% royalty	Odoo multi-company + royalty billing
Finance	Needs one P&L with margin per branch and channel	Odoo Accounting + ZATCA Phase 2

Goal: from bean to books in one system — true cost per cup and per pack, live stock, profit per branch, and ZATCA-compliant invoices.

2 What we found in the demo and current site

The demo is a good start for sales and POS, but the roastery, purchasing, ZATCA Phase 2 and online payments are not set up yet. Findings below come from the Odoo backend, the demo site and qafcoffee.com.

ODOO DEMO (CODEOX-TECHNOLOGIES-LLP-QAF-ROASTER.ODOO.COM)

AREA	CURRENT STATE IN DEMO	GAP TO CLOSE
Platform	Odoo 19 Enterprise on Odoo Online (SaaS)	Custom modules (Salla, Bonat, roasting yield, royalty) need Odoo.sh hosting
Apps installed	Sales, POS + Restaurant, Accounting, Inventory, Barcode, Website, eCommerce, Employees, Recruitment, Skills, Online Jobs, Discuss, Calendar	Purchase, Manufacturing, Loyalty, Payroll, Quality not installed
Saudi localisation	KSA chart of accounts, KSA POS, KSA reports, withholding tax, Zakat journal	ZATCA Phase 2 e-invoicing module not installed; company VAT number and address empty
Company setup	1 company	Franchise entities need multi-company
Warehouses	1 warehouse, 1 stock location; only Receipts, Delivery and POS operations	Roastery, green store, central warehouse and each branch need their own locations and transfers
POS	2 shops: Nada Branch and ARAMCO; restaurant mode; mobile self-ordering on; Cash, Card, Customer Account, Bonat voucher	~8 more branches; 9 unused floor plans to clean; Bonat not integrated
Products	23 products; only 1 has a cost; most have no category; only "Units" used	Full catalogue, costs, kg/g unit chain, lots
Drink variants	"Flat White" has 168 variants (espresso × shot × milk × cup); pizza toppings and sides left from demo data	Rebuild as POS combos/modifiers so reports stay clean
Pricelists	Nada Branch, ARAMCO	Retail, wholesale tiers, franchise pricelists
Online payment	Cash on Delivery only; one "Standard delivery" method	Mada, Apple Pay, cards, Tabby/Tamara; shipping carriers
Websites	4 sites in one database: qafcoffee.com (48 pages copied from Salla), Qaf Coffee Roasters demo (3 pages), thebasebev.com (28 pages), default "My Website"	Decide which sites are in scope; remove the rest
Test data	22 sales orders, 37 POS orders, 3 invoices, 14 contacts, 1 user, 1 employee	Wipe before go-live

Demo website: Home, Shop and Contact only. Home page sections (Latest Drinks, Popular, Top Categories) are empty. Footer still shows placeholder contact details (info@yourcompany.example.com, +1 650 number). Café drinks (Flat White, V60) are sold online next to beans.

Current site (qafcoffee.com on Salla): Arabic/English. Menu: Coffee Packages, Roasted Beans (Saudi, Espresso, Filter harvests, drip bags, capsules), Coffee Making Tools, Wholesale orders, Get a Franchise, Join Our Team. Also branch locations, FAQs, terms and refund policy pages. Wholesale requests go to email or WhatsApp.

3 Website and eCommerce scope

We rebuild qafcoffee.com on Odoo eCommerce so online orders, stock and invoices live in one place. If QAF prefers to keep Salla, option B replaces this section with a two-way connector.

Option A Recommended — move qafcoffee.com from Salla to Odoo

1. DESIGN AND BUILD

- Custom Arabic (right-to-left) and English theme in QAF branding, mobile first
- Home page: hero banner, new releases, best sellers, harvest collections, capsules, reviews, branch finder
- Header, mega menu and footer matching the current Salla menu
- Replace all placeholder content (contact details, footer, empty sections)

2. PAGES (ABOUT 12)

- About us, Branch locations with Google Maps, Wholesale, Franchise, Careers, Contact
- FAQs, Terms, Refund and exchange policy, Privacy, Shipping and delivery

3. SHOP

- Categories: Coffee Packages, Saudi Harvests, Espresso Harvest, Filter Harvest, 1 kg crops, Drip Bags, Capsules, Coffee Tools
- Product pages with origin, process, roast level, tasting notes, altitude, brew guide (Arabic and English)
- Variants for bag size (250 g / 500 g / 1 kg) and grind type
- Filters by origin, process, roast level, price
- Wishlist, compare, related products, "New" and "Best seller" badges
- Remove café drinks (Flat White, V60) from the online shop unless QAF wants pickup ordering

4. CHECKOUT AND PAYMENTS

- Payment gateway: Mada, Visa/Mastercard, Apple Pay (via HyperPay, Moyasar, Tap or PayTabs, QAF's choice)
- Buy-now-pay-later: Tabby and/or Tamara
- Cash on delivery (keep, with optional fee)
- Guest checkout, saved addresses, Saudi national address fields

5. SHIPPING

- Delivery rates by city/zone, free-shipping threshold
- Click and collect from any branch
- Courier integration (Aramex or SMSA; one included, others as change request)

6. CUSTOMER FEATURES

- Account portal: orders, invoices, reorder, tracking
- Discount codes, promotions, gift cards
- Loyalty points shared with the cafés (see Bonat decision in section 5)

- Optional: coffee subscriptions (monthly bean delivery) with Odoo Subscriptions

7. MIGRATION FROM SALLA

- Products, images, descriptions (both languages), categories
- Customers (with consent) and open orders
- 301 redirects from all Salla URLs so Google rankings are kept

8. SEO, TRACKING AND LAUNCH

- Meta titles and descriptions, sitemap, Google Search Console
- Google Analytics 4, Google Tag Manager (existing GTM-TGFC6FV), Meta Pixel, Snap and TikTok pixels
- Domain switch, SSL, go-live checklist

9. HOUSEKEEPING

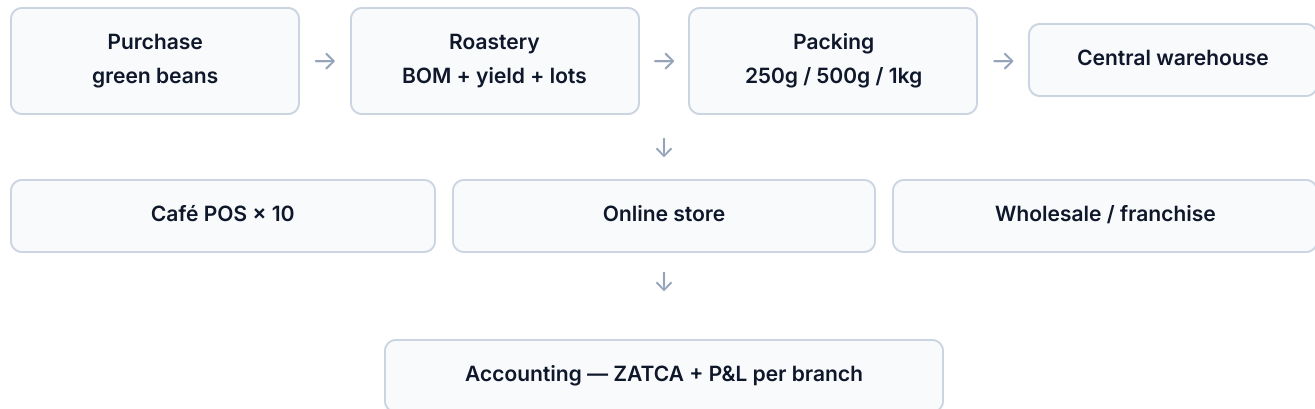

- Remove the default "My Website" and the unused demo site
- thebasebev.com (28 pages found in the database): out of scope unless QAF confirms it is a group brand

Option B Keep Salla, connect it to Odoo

- Two-way sync: products, prices and stock from Odoo to Salla; orders and customers from Salla to Odoo
- Salla orders create Odoo sales orders, deliveries and ZATCA invoices automatically
- Payment reconciliation of Salla payouts in Odoo Accounting
- Needs Odoo.sh hosting (custom connector); Salla subscription stays

4 Odoo ERP scope by module

We configure eight Odoo areas and build four custom pieces. Items marked **(new)** are not in the demo today.

One line from green bean to the books: every step moves stock and cost automatically.

4.1 COMPANY, USERS AND SECURITY

- Company profile: legal name, VAT number, CR, national address, logo (all empty today)
- Multi-company setup for franchise entities (if franchisees use Odoo)
- User roles: owner, finance, roastery, warehouse, branch manager, barista, online store, HR
- Branch-level access so each manager sees only their branch

4.2 PURCHASE (NEW)

- Green bean suppliers (international) and local suppliers (cups, milk, packaging)
- Purchase orders in USD/EUR with landed costs (freight, customs, clearance)
- Reordering rules for packaging and café consumables
- Vendor bills matched to receipts

4.3 MANUFACTURING — ROASTERY (NEW)

- Bill of materials per roast profile: green kg → roasted kg with 15–20% weight loss built in
- Packing bill of materials: roasted kg → 250 g / 500 g / 1 kg bags, drip bags, capsules (incl. bags, valves, labels)
- Lot number per roast batch, roast date and best-before date on each bag
- Work centres: roaster(s), packing line; roaster time and labour cost in product cost
- Actual vs expected yield report per batch
- Optional: Quality checks (cupping score, colour) per batch

4.4 INVENTORY AND WAREHOUSES

- Locations: green bean store, roastery, finished goods, central warehouse, one location per branch
- Unit chain: kg green → kg roasted → bags → grams per drink
- Branch replenishment: branch requests → central warehouse transfer → receipt at branch
- Lot tracking and expiry (FIFO/FEFO)

- Barcode app for receiving, transfers and stock counts
- Monthly stock count per branch with variance report
- Stock valuation: automated, average cost

4.5 POINT OF SALE — CAFÉS

- Set up about 10 branches (Nada and ARAMCO exist; add Khobar Olaya, Shark Khobar, Agdan Walk, Riyadh Olaya, Shark Riyadh, Boulevard World, Jubail 24h, hospital site; final list from QAF)
- Rebuild the drink menu with combos and modifiers (espresso bean, extra shot, milk type, cup type, syrups) instead of 168 variants per drink
- Drink recipes: each drink deducts beans (e.g. 18 g), milk, cup and lid from branch stock
- Branch-specific prices and menus; happy hour and staff discounts
- Payment terminals: Mada/card integration (e.g. Geidea, Nearpay or Surepay — to confirm per branch)
- Kitchen/bar display or order printer; Arabic/English receipts with ZATCA QR
- QR self-ordering at tables (already enabled on demo) and online pickup orders
- Delivery apps (HungerStation, Jahez, Keeta) — via aggregator, as option
- Clean up 9 unused floor plans; one floor plan per dine-in branch
- Offline mode and shift close with cash control

4.6 SALES AND WHOLESALE B2B

- Wholesale pricelists by tier (café, restaurant, e-store) and volume
- Quotation → order → delivery → invoice flow
- B2B customer portal: wholesale customers log in, see their prices, reorder, download invoices
- Credit limits and payment terms
- Private-label orders (if offered)

4.7 FRANCHISE MANAGEMENT

- Franchisee records, contract dates (5 years), territories
- Franchisee ordering via portal at franchise prices
- Monthly 9% royalty invoice based on franchisee sales (custom)
- Intercompany rules if franchise entities run inside the same Odoo

4.8 ACCOUNTING AND FINANCE

- Review KSA chart of accounts; map to QAF's current accounts
- Analytic accounts per branch and per channel (café, online, wholesale, franchise)
- Bank accounts and bank statement sync or import
- VAT return, Zakat and withholding tax reports
- Fixed assets (roasters, espresso machines, fit-outs) with depreciation
- IFRS 16 leases for branch rent (journal exists in demo)
- Budgets per branch; month-end close checklist
- Dashboards: sales, margin per cup and per bag, branch P&L

4.9 HR AND PAYROLL (NEW)

- Employee records, contracts, Iqama/passport expiry reminders
- Shift planning for baristas across branches, attendance

- Saudi payroll: GOSI, WPS/Mudad file, end-of-service benefit, leave
- Recruitment and Online Jobs (installed) linked to the Careers page
- Employees self-service: leave requests, payslips

4.10 LOYALTY AND MARKETING

- Loyalty points and rewards shared between cafés and online store (Odoo Loyalty) or Bonat integration (see section 5)
- Gift cards and e-wallet
- Email and SMS campaigns to customers

5 ZATCA, integrations and data migration

ZATCA Phase 2 is the one item that must be live on day one; it is not installed in the demo today.

5.1 ZATCA PHASE 2 (E-INVOICING)

- Install and configure Odoo's Saudi e-invoicing module
- Onboard each device/branch with ZATCA (CSID via Fatoora portal OTP) — sandbox first, then production
- Simplified invoices (B2C) from every POS and the online store, reported within 24 hours
- Standard tax invoices (B2B) for wholesale and franchise, cleared before sending
- Credit notes and returns
- Bilingual Arabic/English invoice and receipt layouts with QR code
- Error monitoring and resubmission process

5.2 INTEGRATIONS

INTEGRATION	PURPOSE	TYPE
Payment gateway (HyperPay / Moyasar / Tap / PayTabs)	Online card, Mada, Apple Pay	Standard or connector
Tabby / Tamara	Buy now, pay later online	Connector
POS card terminals	Card payments at the counter post straight to Odoo	Standard or connector per terminal brand
Courier (Aramex or SMSA)	Shipping labels and tracking	Connector
Bonat loyalty	Keep existing Bonat vouchers/points, or replace with Odoo Loyalty	Custom (decision needed)
Salla (option B only)	Two-way product, stock, order sync	Custom
Delivery apps (optional)	HungerStation, Jahez, Keeta orders into POS	Via aggregator, change request
Bank	Statement import/sync	Standard
WhatsApp (optional)	Order updates, wholesale orders	Connector

HOSTING NOTE

Custom modules (Salla connector, Bonat, royalty billing, roast-yield reports) cannot run on Odoo Online. We move the database to Odoo.sh before development starts.

5.3 DATA MIGRATION

- Clean the demo: remove test orders, demo pizza attributes, unused floors and websites
- Products: full catalogue with Arabic/English names, barcodes, costs, images (from Salla export + roastery list)
- Bills of materials and drink recipes (from QAF's roastery and bar team)
- Customers: online, wholesale and franchise accounts
- Suppliers and price lists
- Opening stock per location on go-live date (from physical count)
- Opening balances: trial balance, open customer and supplier invoices
- Employees and contracts (for payroll)
- Not included: full transaction history from previous systems (balances only)

6 Phases, effort and deliverables

About 140 person-days over 18–20 weeks, with a live system for finance and cafés by week 10.

INTERNAL USE

Effort figures below are internal estimates to price from, not client-facing.

PHASE	SCOPE	EST. EFFORT (PERSON-DAYS)	WEEKS	DELIVERABLES
0. Discovery and design	Workshops with finance, roastery, branches, online; confirm branch list and processes	8	1–2	Signed process design document
1. Foundation and finance	Odoo.sh move, company setup, users, accounting, analytic per branch, ZATCA Phase 2	15	2–5	Live accounting, ZATCA sandbox passed
2. Roastery and inventory	Purchase, landed costs, roasting and packing BOMs, lots, locations, transfers, barcode	20	4–8	Costed bean-to-bag flow
3. Café POS rollout	~10 branches, menu rebuild with modifiers, drink recipes, terminals, receipts, self-ordering	20	6–10	All branches selling in Odoo
4. Website and eCommerce	Option A: full rebuild and Salla migration (30) — or option B: Salla connector (18)	30 / 18	8–14	New qafcoffee.com live
5. Wholesale and franchise	B2B pricelists, customer portal, franchise ordering, royalty billing	12	12–15	Portal and royalty invoices live
6. HR and payroll	Employees, shifts, attendance, KSA payroll, GOSI, WPS	10	14–17	First payroll run in Odoo
Data migration	All masters and opening balances	10	Across phases	Loaded and signed-off data
Training, testing, go-live	User testing, training, cutover per phase	12	Across phases	Trained users, go-live sign-off
Total		~137 (option A) / ~125 (option B)	18–20	

TRAINING AND GO-LIVE

- Role-based training in Arabic and English: finance, roastery, warehouse, branch managers, baristas, online team, HR
- Train-the-trainer for branch managers so new baristas are trained in-house
- Short Arabic/English user guides and videos per role
- User acceptance testing with QAF sign-off before each go-live
- On-site support at the first two branches on POS go-live day

SUPPORT AFTER GO-LIVE

- 30 days of hypercare after each phase go-live (bug fixes, questions)
- Then optional annual support contract (AMC): monthly hours bank, Odoo version upgrades, small changes

7 Out of scope

- Odoo Enterprise licences and Odoo.sh hosting fees (paid by QAF to Odoo)
- Hardware: POS terminals, printers, tablets, card machines, barcode scanners
- Payment gateway, Tabby/Tamara, courier and Salla fees
- Product photography, copywriting and translation of new content
- Digital marketing and paid ads (can be quoted separately)
- thebasebev.com website (unless confirmed as a group brand)
- Mobile app (can be quoted separately)
- Full history migration from old systems

8 Assumptions

- QAF names one project owner who approves each phase within 5 working days
- QAF provides product lists, recipes, yields, supplier lists and opening balances in our Excel templates
- ZATCA onboarding OTPs and VAT/CR details provided by QAF on time
- Odoo 19 Enterprise stays the version for the project
- Changes outside this document follow a written change request with its own cost

Questions to confirm before pricing

- ☒ Exact number and names of branches (7 listed online vs about 10)
- ☐ Option A (Odoo website) or option B (keep Salla)?
- ☐ Keep Bonat loyalty or move to Odoo Loyalty?
- ☐ Do franchisees run on QAF's Odoo or their own systems?
- ☐ Is thebasebev.com part of the group and in scope?
- ☐ Number of Odoo users (for licence estimate) and payroll headcount
- ☐ Which payment gateway and card terminals QAF already has contracts with
