

ODOO 19 — CRM · INVENTORY · WHATSAPP MARKETING

Beyond the Till. One System for Every Piece.

A solution proposal for Adiba Maison Jewellery — extending your existing Odoo POS with CRM, Inventory, and WhatsApp Marketing so every customer, every piece, and every message lives in one place.

Adiba Maison Jewellery

Adiba Maison Jewellery already runs **Odoo POS** at the counter. This proposal covers the natural next step — adding **CRM, Inventory, and WhatsApp Marketing** on the same Odoo platform, so stock, customers, and communication are no longer separate from the till.

Client	Adiba Maison Jewellery — Jewellery Retail, KSA
Prepared by	CodeOx · shabeeb.k@code-ox.com · +966 53 571 6437
Platform	Odoo 19 (Existing installation — POS already live)
Current Users	1 User
Recommended Users	2 Users — 1 Admin/Owner + 1 Daily Operations
Modules Added	CRM · Inventory · WhatsApp Marketing
Investment	SAR 8,000 — One-Time Implementation Fee
Document Ref	ADB-ODOO-2026-01 · Version 1.0

01 Today: POS Only

CRM
Not active

Inventory
Not active

WhatsApp
Not active

Odoo POS handles the sale at the counter — but everything before and after the sale (who the customer is, what stock is really available, and how you follow up) still happens outside the system.

02 What POS-Only Is Costing You

TODAY — POS ONLY	WITH CRM + INVENTORY + WHATSAPP
Customer purchase history lives only in scattered receipts — no single profile per customer	→ Every customer has one record: purchases, preferences, and occasions (weddings, Eid, anniversaries) in one place
Stock is counted at the till, not tracked by weight, purity, or piece — hard to know real-time stock across categories	→ Inventory tracked by weight, karat/purity, category, and item — accurate stock visible any time, not just at checkout
Custom order and bespoke piece requests are tracked on paper or memory — easy to lose or delay	→ CRM opportunity per custom order — status, deadline, and customer tied together, nothing forgotten
New arrivals, offers, and repair/order updates go out by personal phone calls — inconsistent, no record	→ WhatsApp Business messages sent from Odoo — order confirmations, repair status, and new collection broadcasts, all logged
Owner has no live view of stock or customer activity without asking staff or checking the counter	→ Owner dashboard: stock levels, top customers, and sales activity visible any time, from any device

03 One Platform, Same Odoo You Already Use

CRM, Inventory, and WhatsApp Marketing install directly into your existing Odoo — POS keeps working exactly as it does today.

➤ No new software to learn from scratch — same Odoo login, new modules alongside POS

➤ Walk-in customers captured at POS flow straight into CRM for follow-up

➤ WhatsApp messages linked to the customer's CRM record — full history in one thread

➤ POS sales automatically reduce inventory stock — no manual recount needed

➤ Stock levels update in real time as pieces are sold, received, or transferred

➤ Everything accessible from desktop or the Odoo mobile app

04

Features — At a Glance

Customer Profiles & History

One record per customer — every purchase, preference, and occasion. Find any customer's full history in seconds.

Custom Order Tracking

Bespoke pieces and special requests tracked as CRM opportunities — status, deadline, and customer linked together.

Follow-Up Reminders

Odoo reminds staff to follow up on quotes, repairs, and occasions (weddings, Eid, anniversaries) — no customer forgotten.

Stock by Weight & Purity

Track pieces by weight, karat/purity, and category — not just a generic quantity count.

Real-Time Stock Visibility

POS sales auto-deduct stock. Know exactly what's on hand, without a manual recount at the counter.

Low-Stock Alerts

Get notified before a fast-moving category runs out — reorder before you lose a sale.

WhatsApp Business Messaging

Message customers directly from Odoo. Full conversation history logged on their CRM record — nothing on personal phones.

Order & Repair Updates

Automated WhatsApp updates for custom order and repair status — customers stay informed without a phone call.

Broadcast Campaigns

Announce new collections, Eid or wedding-season offers, and promotions to your customer list in one send.

05

Two Users, Two Roles

Admin / Owner

- Full visibility across CRM, Inventory, and POS
- Sales reports, stock valuation, and customer analytics
- Approves pricing, discounts, and stock adjustments
- Sends WhatsApp broadcast campaigns

Daily Operations

- Runs POS sales — no change to current workflow
- Logs walk-in customers and custom order requests into CRM
- Updates stock on receiving and transfers
- Sends order and repair status updates via WhatsApp

Splitting Admin and Daily Operations keeps pricing and reporting control with the owner, while daily staff work without needing owner-level access — standard practice for a single-outlet retail setup moving from 1 to 2 users.

Subject: Re: Plan to buy RedHat servers

Hello

After our discussion with our technical experts, here is the offer of YourCompany. We believe it will meet every

Customer record — purchase history, planned activities, and WhatsApp communication in one viewSource: odoo.com

07 WhatsApp & Inventory — Built for Jewellery Retail

WhatsApp Marketing

- Message customers directly from their CRM record
- Full WhatsApp thread saved permanently
- Pre-approved templates for order & repair updates
- Broadcast new collections to your customer list
- One shared business number — no personal phones

Inventory

- Fields for weight, karat/purity, and stone details
- Category-wise stock: rings, necklaces, bangles, sets
- Stock auto-deducted on every POS sale
- Receiving and adjustment logged with full audit trail
- Low-stock alerts by category

KSA Context: WhatsApp is the primary customer channel in Saudi Arabia — especially for high-value, relationship-driven purchases like jewellery. Odoo's native integration keeps every conversation on record, not on a personal device.

08

Investment Summary

ONE-TIME IMPLEMENTATION — PAID TO CODEOX

CRM + Inventory + WhatsApp Marketing — Setup, Configuration & Training

2 users (Admin/Owner + Daily Operations) · One-time · **Exclusive of VAT**

₹ 8,000

Odoo user licence fees are billed directly by Odoo per your subscription plan and are separate from this fee. Adiba currently holds a 1-user licence for POS — moving to 2 users requires an upgrade on the Odoo plan, which we will confirm exact pricing for during the discovery session.

CodeOx Recommendation — Add CRM, Inventory & WhatsApp on Your Existing Odoo

Adiba's POS is already live on Odoo — the fastest, lowest-risk path is extending the same platform rather than adopting new software. CRM captures every customer relationship, Inventory brings weight- and purity-level stock control, and WhatsApp Marketing keeps every customer conversation on record. Two users — Admin/Owner and Daily Operations — gives the owner full oversight while daily staff work independently.

- 1

Discovery Session — CodeOx maps Adiba's exact stock categories, customer touchpoints, and WhatsApp workflow.
- 2

Setup & Configuration — CRM, Inventory (weight/karat fields), WhatsApp Business API, and 2 user roles configured on your existing Odoo.
- 3

Training & Go-Live — Admin and Daily Operations users trained. Adiba goes live with CodeOx on standby support.
