

COMMERCIAL PROPOSAL · 28 SEPTEMBER 2026

Qaf Loyalty App

Customer App on Odoo

A Qaf-branded customer loyalty app — the same relationship Bonat gives its merchants, owned in-house — running on Qaf's own Odoo. Staff award and redeem points at the existing Odoo POS, and head office runs the whole programme from the Odoo back office. No cashier app, no admin dashboard, no per-branch subscription.

Extra Apps — Odoo Runs Till & Admin

PROPOSAL NO.

CX-QAF-2026-03

DATE

28 September 2026

CURRENCY

SAR (Saudi Riyal)

PREPARED BY

Code-ox Technologies

ONE ACCOUNTABLE TEAM

The App, Built Natively on Qaf's Odoo

Code-ox builds the app and its integrations directly on the Odoo back end — POS, eCommerce, payments and messaging. Certified Odoo Silver Partner, so the loyalty engine sits inside Odoo, not bolted on, and till and admin need no extra apps.

Flutter App

Silver Partner

OVERVIEW

One App to Build, Odoo Runs the Rest

Qaf wants customers to open a Qaf app, collect points, claim rewards and buy — the same relationship Bonat gives its merchants, but branded as Qaf and owned in-house, without paying Bonat a monthly fee per branch or renting a tablet at every till. Because Qaf already runs Odoo, only one thing needs building: the **customer app**. Staff award and redeem points at the **Odoo POS**, and head office manages rules, offers and reports from the **Odoo back office** — so no cashier app and no admin dashboard are needed.

ABOUT QAF & THE STARTING POINT

Qaf sells specialty coffee through its online store (qafcoffee.com) — roasted beans, envelopes, capsules and brewing tools — alongside café, store-supply, franchise and careers pages. Customers already have accounts and order history in the store. The loyalty system matches those customers by phone number, so their online and in-store activity earn points in one place, inside Odoo.

WHAT WE BUILD VS WHAT ODOO ALREADY DOES**WE BUILD****Customer App**

Join, show a QR code, see points, claim rewards, get offers, find branches and pre-order — iOS & Android.

ALREADY IN ODOO**Odoo POS — the Till**

Staff identify the member and points are awarded and redeemed on the sale. No separate cashier app to build or run.

ALREADY IN ODOO**Odoo Back Office — Admin**

Head office sets rules, sends offers and reads reports in Odoo. No separate admin dashboard to build.

WHY IN-HOUSE BEATS A SUBSCRIPTION

Bonat charges a monthly subscription **per branch** plus a one-time fee for each till tablet — a cost that grows with every branch Qaf opens. Building the app on Odoo is a one-time build Qaf owns: the customer data, the loyalty rules and the brand stay with Qaf in a system it already runs, and adding a branch costs nothing per month. The shared marketplace Bonat runs (one app serving many businesses) is not needed for a single brand — see Assumptions.

APPROACH

A Real App, Not a Web Wrapper

A loyalty programme lives in an app customers *open* — on the home screen, with a card in their wallet and a push notification when a reward lands. A PWA (a mobile version of the website) cannot do that reliably. We recommend a native **Flutter** app for the customer side.

- ✓ **Reliable push notifications**

"Reward earned", offers and order status land on the phone. On iOS, web push is limited and easily missed; native push is dependable.
- ✓ **Apple & Google Wallet passes**

The loyalty card sits in the phone's wallet, scannable at the till — a web page cannot.
- ✓ **Instant QR at the till**

The member's QR displays and scans in a second so the Odoo POS awards points without slowing the queue — native camera access a browser can't guarantee.
- ✓ **Store presence & a home-screen icon**

A listing on the App Store and Google Play, discoverable and branded — not a bookmark customers forget.

THE ONLINE STORE STILL HAS ITS PLACE

qafcoffee.com stays live for browsing and buying products. The app links to it (and, later, sells inside the app), while the loyalty relationship — points, rewards, the wallet card and notifications — lives in the native app where it belongs.

HOW THE PIECES CONNECT

The app reads and writes one **Odoo back end** — loyalty rules, points and rewards live in Odoo. Odoo already runs the till and the eCommerce link, so in-store and online sales both earn points natively, with no separate loyalty database to reconcile.

1

SCOPE OF WORK — THE APP WE BUILD

Customer App

Every feature below is part of the v1 build. The app is the customer's home for the Qaf loyalty programme — earning, rewards, offers and pickup, in Arabic and English.

AREA	FEATURES
ACCOUNT	Phone sign-up — mobile number plus SMS code, with existing store customers matched by phone; Arabic & English with full right-to-left layout and a language switch; profile for name, birthday, preferred branch and notification choices; and account deletion to erase data from the app.
LOYALTY	Personal QR code shown at the till (phone number as a back-up); points balance & history listing every earn, spend and expiry; visit & stamp progress (for example, 9 drinks and the 10th free); reward catalogue showing what is claimable now and what the next reward needs; my rewards wallet for unused rewards and coupons, each with an expiry date; tiers such as Silver and Gold with a progress bar; and expiry reminders before points or rewards lapse.
OFFERS	Offers & coupons — current promotions with a code or QR to redeem; surprise gifts that Qaf sends, with an alert and the gift shown in the wallet; and referral , inviting a friend so both earn points after the friend's first purchase.
GIFTING	Gift cards — buy a card, send it to a friend with a message, and redeem it in store.
VISIT	Branch finder with list, map, opening hours and directions; pickup pre-order to pick items, pay in the app and collect at the branch; and order history & reorder for past pickup orders with one-tap reorder.
SHOP	Link to the online store , opening qafcoffee.com for beans, capsules and tools; and in-app shopping to browse and buy store products inside the app.
ENGAGE	Push & inbox for reward-earned, offers and order status; ratings & feedback to rate a visit or order and leave a comment; contact Qaf by WhatsApp, call or message; and wallet card to add the loyalty card to Apple Wallet or Google Wallet.
PAYMENT	Prepaid balance — top up and pay with app balance.

2

SCOPE OF WORK — NO EXTRA APPS

Operations in Odoo — Till & Head Office

There is no separate cashier app and no admin dashboard to build. Staff award and redeem points at the **existing Odoo POS**, and head office runs the whole programme from the **Odoo back office**. Code-ox configures the Odoo Loyalty setup and links it to the app so the two stay in sync.

At the Till — Odoo POS

Identify the member	Scan the app QR code or type the phone number
Award points	Points added automatically on the sale — no manual bill entry
Redeem	Rewards, coupons and gift cards applied against the bill
Existing hardware	Runs on Qaf’s existing Odoo POS — no tablet to rent
Refunds & corrections	Follow standard Odoo POS controls
Walk-in sign-up	Quick member registration at the counter

Head Office — Odoo Back Office

Loyalty rules	Earning rules, rewards, coupons and tiers (Odoo Loyalty)
Customer records	Visits, points, spend and history
Manual adjustment	Add or remove points, logged against the user
Segments & campaigns	Email, SMS and WhatsApp
Gifts & offers	Sent to chosen customers or segments
Reports & export	Dashboards with export to spreadsheet
Staff & roles	Odoo users with permissions, per branch
Branches	Odoo POS shops, with an activity log

WHAT CODE-OX DELIVERS ON THE ODOO SIDE

We configure the Odoo Loyalty programme (earning rules, rewards, tiers and expiry) to match Qaf's scheme, link members between the app and Odoo by phone number, and build the connector that keeps points, rewards and customer records in sync in real time. Standard Odoo reporting, POS and back-office screens are used as-is — no custom dashboard is built.

SCOPE OF WORK

Integrations & Quality

The app connects to Odoo and the services below so points, notifications and online sales all flow into one place.

SYSTEM	DESCRIPTION
Odoo POS	Members identified at the till (app QR or phone); points awarded automatically on the sale, rewards and gift cards redeemed — native to Odoo
Odoo Loyalty engine	Earning rules, rewards, tiers and balances configured in Odoo and synced to the app by our connector
SMS provider	Sign-in codes for customers
Push service (Apple & Google)	Alerts to customer phones
Analytics	App usage and crash reports
eCommerce store	Web orders earn points, matched to the customer by phone; store webhooks report each paid order into Odoo
Payment gateway	Card, Mada and Apple Pay for gift cards and pickup orders, through a Saudi gateway
WhatsApp Business	Campaigns and order updates beyond the app
Tax invoices (ZATCA)	Gift-card and pickup sales produce VAT invoices that meet ZATCA e-invoicing rules, via Odoo
Wallet passes	Apple Wallet and Google Wallet card

QUALITY REQUIREMENTS

- ✓ **Language & look**

Arabic first with full right-to-left layout, English second, Qaf colours and logo throughout.
- ✓ **Privacy (PDPL)**

Consent at sign-up, a privacy policy, data deletion on request, and storage that meets Saudi personal-data law.
- ✓ **Security**

Encrypted connections, Odoo roles that limit staff to their own branch, and a log of every balance change.
- ✓ **Fraud control**

QR codes that refresh, one award per bill, daily limits per customer, and an alert on unusual redemptions.
- ✓ **Speed & reliability**

The scan-and-award step at the Odoo POS feels instant; the system stays up during opening hours.
- ✓ **Store approval**

Meets Apple and Google review rules, including the in-app account-deletion option.

DELIVERY PLAN

Approach & Timeline

The app is delivered as one continuous build — at this size there is no need for a multi-sprint programme. Indicative delivery is **20–25 business days** from kickoff, confirmed after the design step. The workstreams below run in parallel where dependencies allow.

WHAT THE ENGAGEMENT INCLUDES

1 · Discovery & Design

Confirm loyalty rules, branch list, brand assets and screens; review the Odoo POS & Loyalty setup.

2 · Customer App Build

The full Flutter app for iOS & Android — accounts, loyalty, offers, gifting, visits and engagement.

3 · Odoo Loyalty & Connector

Configure Odoo Loyalty (rules, rewards, tiers) and build the app ↔ Odoo connector and POS points link.

4 · Integrations

SMS, push, analytics, eCommerce, payment gateway, WhatsApp and ZATCA e-invoicing through Odoo.

5 · QA & Store Submission

Testing, PDPL & security checks, and submission to the Apple App Store and Google Play.

6 · Go-Live & Handover

Launch, monitoring and handover, followed by 90 days of complimentary warranty.

Indicative Total — one continuous delivery

20–25 Business Days

TECHNOLOGY

Flutter — Customer App

One codebase builds both iOS and Android, so the app ships faster and stays consistent.

Odoo Back End & API

Odoo is the loyalty engine and API — POS, eCommerce and customer data already live there, so points stay in sync in real time.

Odoo POS & Back Office

Till and admin run on standard Odoo — no cashier app or admin dashboard to build or maintain.

FINANCIALS

Investment & Payment Schedule

DELIVERABLE	CATEGORY	AMOUNT (SAR)
QAF LOYALTY APP — CUSTOMER APP ON ODOO		
Customer App — iOS & Android (Flutter)	Development	Included
Odoo Loyalty Configuration — rules, rewards, tiers, POS link	Development	Included
App ↔ Odoo Connector & API	Development	Included
Integrations — SMS, Push, eCommerce, Payment, WhatsApp, ZATCA	Integration	Included
Quality — PDPL, security, fraud control, store approval	Integration	Included
QA, App-Store Submission & Go-Live	QA & Launch	Included
Project Total		37,500
Total Investment	Exclusive of VAT	SAR 37,500

MILESTONE	TRIGGER	AMOUNT (SAR)
Advance (40%)	Upon sign-off and commencement	15,000
App Build & UAT (30%)	Customer app built and accepted at UAT sign-off	11,250
Final Go-Live (30%)	Full go-live, the app live on the stores	11,250
Project Total		37,500

* All amounts are exclusive of VAT. VAT (15%) will be added to each invoice as per KSA regulations. Assumes Qaf's Odoo already runs POS and the Loyalty module; Odoo licensing and any module additions are separate.

THIRD-PARTY ACCOUNTS & RUNNING COSTS

App-store accounts (Apple Developer, Google Play), the SMS/OTP provider, push service, payment gateway, WhatsApp Business, Odoo licensing and server hosting are Qaf's third-party subscriptions, billed directly by those providers — not included in the project fee. We set each one up and connect it as part of delivery.

POST-LAUNCH

Support, Maintenance & Add-Ons

Annual Maintenance Contract (AMC)

SAR 7,000 / year + VAT

Optional and renewable · flat annual fee, exclusive of VAT · begins after the 90-day complimentary post-launch warranty.

INCLUDED IN THE AMC

- Bug fixes & defect resolution
- iOS & Android OS-version compatibility updates
- App-store resubmissions when stores change rules
- Security patches & dependency upkeep
- Minor in-app content & configuration changes
- Crash monitoring & fixes
- App performance monitoring & health checks
- Priority support channel (email & phone)

NOT INCLUDED

- New features & custom requirements
- New integrations & major redesigns
- App-store, SMS, push, gateway & hosting costs
- Third-party subscription fees

90-DAY COMPLIMENTARY WARRANTY

Every launch includes 90 days of complimentary bug-fix support after go-live. The optional AMC continues that cover — including the app-store resubmissions native apps need whenever Apple or Google change their rules — for a predictable annual fee.

TERMS & CONDITIONS

General Terms

- **Scope of Work:** Covers the customer-facing Flutter app, its Odoo Loyalty configuration and the integrations set out on pages 4–6; all other operations run through Qaf's Odoo. Delivered as one continuous build (page 7).
- **Working Together:** Code-ox assigns a project lead, delivers to the agreed scope and keeps Qaf informed throughout. Qaf names one project owner who gives feedback and approvals within 5 working days and shares the brand assets, branch list, loyalty rules, Odoo access (POS & back office), eCommerce API/webhook access and the app-store accounts. Timely input from both sides keeps delivery on schedule.
- **Changes & Additions:** New requests are welcome and handled through a short written change note agreed by both parties, with any effect on timeline or cost set out and approved before that work begins.
- **Third-Party Costs:** App-store, SMS/OTP, push, payment gateway, WhatsApp Business, Odoo licensing and server-hosting fees are billed directly to Qaf by those providers; Code-ox sets up and connects each as part of delivery.
- **Data, Privacy & Ownership:** The app handles customer phone numbers and points that carry a money value, and is built to PDPL requirements — consent at sign-up, a privacy policy and data deletion on request. Loyalty data lives in Qaf's Odoo, and upon full payment all custom code and configuration become Qaf's exclusive property, delivered as a system Qaf owns outright.
- **Revisions, Warranty & Maintenance:** Up to two (2) revision rounds per stage, and 90 days of complimentary bug-fix warranty post go-live. Continued cover is available through an optional Annual Maintenance Contract at **SAR 7,000/year + VAT** (inclusions on the previous page).
- **Confidentiality & Law:** Both parties keep this proposal confidential and work in good faith. Governed by the laws of the Kingdom of Saudi Arabia. Valid for **30 days** from issuance.

ASSUMPTIONS & EXCLUSIONS

Key Project Assumptions

- ☐ No cashier app and no admin dashboard are built: staff award and redeem points at Qaf's existing Odoo POS, and head office runs the programme from the Odoo back office. A working Odoo instance with POS and the Loyalty module is a hard dependency.
- ☐ Qaf provides Odoo access and eCommerce API/webhook access for matching customers by phone and earning points on in-store and web orders — a dependency for the connector build.
- ☐ A Bonat-style shared marketplace (one customer app serving many businesses) is out of scope — a single-brand, in-house app does not need it.
- ☐ Wallet passes, gift-card VAT invoicing and payment methods are confirmed with Qaf's accountant and chosen Saudi gateway during design.

AUTHORIZATION

Acceptance & Authorization

By signing below, both parties confirm acceptance of the scope, price and payment schedule, and authorize commencement of the project. A formal Statement of Work will follow the signed proposal and advance payment.
