DESIGN & BUILD PROPOSAL · 27 SEPTEMBER 2026

The home-healthcare app that becomes a recovery companion.

A complete design-and-build proposal for the Vitality mobile app — patient-centric home and virtual healthcare, from discovery and booking to in-app payment, visit-day tracking, and a guided recovery journey. Native Nixpend integration, WhatsApp and voice/call support built in, bilingual Arabic / English.

Home + Virtual Healthcare

PROPOSAL REF.	DATE	CURRENCY	PREPARED BY
CX-VIT-2026-02	**27 September 2026**	**SAR**	**Code-Ox Technologies**

01 · THE BRIEF

Project overview & our understanding

Vitality has asked us to design and build **its patient-centric mobile app** — a single digital journey for home and virtual healthcare that takes a patient from **Discover → Select → Book → Pay → Receive Care → Follow Up → Rebook**, across five service categories: Medical Care, Women & Family, Wellness & Recovery, Home Aesthetics, and Memberships & Packages.

Code-Ox brings established product strategy and prior delivery experience with Vitality to this engagement, enabling the project to move directly from the client's BRD into design and build. This proposal sets out the complete scope, platform integrations, commercial terms and delivery timeline for the Vitality mobile application.

02 · OBJECTIVES

What this build sets out to achieve

A recovery companion, not a marketplace

A named, consistent caregiver and a visible recovery journey — the first in the region to pair booking convenience with genuine care continuity.

Everything in-app

Discovery, booking, in-app payment and visit-day tracking — no redirect out to a third-party portal.

Family-inclusive

One account manages care for multiple family members, with privacy controls that respect the patient.

Culturally native

Arabic-first, gender-guaranteed caregiver matching, notifications scheduled around prayer times.

Connected to what's live

Native Nixpend HIS, plus WhatsApp and voice/call channels reused rather than rebuilt — one conversation, one voice line.

Measurable

An admin dashboard reporting the client's own KPIs — bookings, conversion, retention, satisfaction.

03 · SCOPE

What we'll design & build

Organised around the client's own five service categories. The same booking and program engine powers every category — clinical, wellness or aesthetic — so there is one consistent patient experience, not five separate builds.

DISCOVER	SELECT	BOOK	PAY	RECEIVE CARE	FOLLOW UP	REBOOK

MEDICAL CARE & WELLNESS / RECOVERY CORE JOURNEY

FEATURE	SCOPE DESCRIPTION
4-Step Booking Wizard	Service → date/time (live availability) → details → payment → confirmation, for one-off services (doctor home visit, home nursing, home lab, home physiotherapy, IV therapy).
Live Availability & Fast Booking	Real-time slot availability with same-day and urgent options, built to support Vitality's 24/7 service and 2-hour response model.
Program / Package Booking	Multi-session care programs (Post-Surgery Recovery, Home Care Plus, Diabetes Care) booked as a full journey; confirmation instantiates a care plan with milestones.
Caregiver Matching	Gender preference as a hard guarantee, plus language, specialty and care-style; a named "match reveal" rather than a generic assignment.
Same-Caregiver Continuity	The same person returns across a care plan, with an easy, guilt-free way to request someone else.
Visit-Day Live Tracking	Status from confirmed → preparing → on the way (with ETA) → arrived → in progress → completed.
Daily Recovery Plan & Guided Exercises	Today's exercises with video demo, Arabic voiceover, and adaptive follow-up based on how the patient felt.
Progress Tracking & Outcome Charts	Daily wellness check-in, a visual recovery journey (sessions done vs. remaining), and before/after outcome charts.
2-Tap Rebooking	"Same caregiver, same time, next week" from a single tap, for repeat and maintenance patients.

WOMEN & FAMILY

FEATURE	SCOPE DESCRIPTION
Family Care Circle	One account manages care for multiple family members, with clear roles (coordinator vs. viewer).
Per-Data-Type Privacy	Family can see visit confirmations and milestones, while a patient's mood check-ins and personal notes stay private.
Booking-on-Behalf	A coordinator books, pays for, and manages care for a dependent from their own phone.
Gender-Guaranteed Matching	Especially relevant for women's-health services — a validated pattern for this audience.

03 · SCOPE — CONTINUED

Aesthetics, memberships & support

HOME AESTHETICS & WELLNESS PROGRAMS

FEATURE	SCOPE DESCRIPTION
Shared Booking & Program Engine	The full home aesthetics catalogue — IV vitamin drips, HydraCool therapy, Venus Legacy body contouring and beauty-at-home treatments — runs on the same booking and program engine, with no separate app experience.
Named Aesthetic Services	Each service carries its own description, duration, prep notes and per-service pricing in the in-app catalogue, single-session or as a package.
Multi-Session Wellness Courses	Tracked the same way as recovery programs — sessions, milestones and renewal nudges.

MEMBERSHIPS & PACKAGES

FEATURE	SCOPE DESCRIPTION
Package Purchase & Session Credits	Buy packages in-app and track remaining session credits per patient.
Recurring Membership Tiers	Essential / Advanced / Elite recurring membership program with renewal and billing, built as requested.

SUPPORTING FEATURES — ACROSS ALL CATEGORIES

- **Care Thread** — one persistent chat with the care team; the WhatsApp channel handles first-line questions with clear human escalation.
- **One-Tap Voice Support** — One-tap voice/call support for anything easier said than typed.
- **Care-Only Notifications** — reminders, exercise nudges and follow-ups, kept separate from marketing and scheduled around prayer times.
- **Payments** — Mada and Apple Pay baseline, Tabby/Tamara for higher-value bookings, insurance capture with major local insurers.

04 · THE DIFFERENTIATOR

A recovery companion, not a booking marketplace

Every home-healthcare app in the region — including the market leader Sehhaty and the closest competitor Sanar — is built as a transactional booking marketplace: pick a service, pick a slot, pay. None builds a relationship with the patient **during** recovery. That gap is Vitality's moat, and premium home care is what makes it possible.

PILLAR	WHAT IT MEANS, DELIVERED IN THE HOME
Named, consistent caregiver	A real person — matched on gender (hard guarantee), language and care-style — revealed by name, who returns across the whole care plan. A clinic cannot promise the same face at your door each visit; home care can.
A visible recovery journey	Sessions done vs. remaining, rehab goals in real-life terms ("walking without support"), and before/after outcome charts — motivation the patient sees, and the reason packages renew.
Care that reaches into the home	A daily recovery plan with guided exercises, Arabic voiceover and a "how did that feel" check-in — extending care into the days between visits that a clinic never sees.
Family that stays involved	A Family Care Circle lets a son or daughter book, pay and follow milestones for a parent from their own phone — while the patient's private notes stay private.
Culturally native by default	Arabic-first, gender-guaranteed matching, and care-only notifications scheduled around prayer times.

WHY THIS POSITIONING WINS

Vitality becomes the first in the region to pair booking convenience with a genuine **recovery-companion** experience — a named caregiver, a visible journey, and a family kept in the loop. A real, currently-unoccupied market position, not a nicer interface on the same transactional idea.

05 · PLATFORM

How the app connects

INTEGRATIONS

- **Nixpend HIS** — native, reads availability, writes bookings; no redirect
- **Payments** — Mada/Apple Pay, Tabby/Tamara > ﷼ 1,000, insurance verify
- **WhatsApp** — in-app chat with the care team
- **Voice / Call** — one-tap call support
- **SMS/Push** — care-only, no marketing
- **GA4 & Maps** — analytics + caregiver ETA/coverage

DEPENDENCY & RISK — CONFIRM BEFORE BUILD

Every screen that touches Nixpend — real-time availability, booking-write and **in-app payment** — is built against Nixpend's API, never a redirect out to its own interface. Confirm up front that Nixpend exposes an **availability API**, a **booking-write API**, and a **payment API / gateway-token flow**. **Should Nixpend not expose a payment API, Code-Ox will deliver a baseline in-app gateway integration** so the launch holds on schedule — the payment contract is the one hard dependency to confirm before build.

TECHNOLOGY STACK

Mobile App

Flutter — single codebase, native iOS & Android.

Backend & API

NestJS — Node.js API and Nixpend integration layer.

Admin Dashboard

Next.js — React web console for ops & reporting.

05 · PLATFORM — CONTINUED

Operations, admin & measurement

ADMIN & OPERATIONS CONSOLE

FUNCTION	SCOPE DESCRIPTION
Appointment Management	Booking, rescheduling and cancellation across one-off services and multi-session programs, from one queue.
Caregiver Availability & Zone Assignment	Caregiver rosters, home-service district assignment and visit-day routing across covered areas.
Service-Area Management	The covered Riyadh districts maintained centrally, driving the in-app coverage check at booking.
Cancellation / Refund Policy Engine	Clear policy shown at the point of action; payment and refund handling reconciled against Nixpend settlement.
Reporting Dashboard	Bookings, revenue, conversion, cancellation, repeat bookings, service utilisation and satisfaction — the client's own KPIs.

UX PATTERNS WE'RE ADOPTING

— **Map-pin-first home booking** — pin location as step one; saved addresses are the shortcut for repeat patients, not the default.

— **Insurance eligibility with an honest cash fallback** — check the moment a payer is selected; never dead-end a patient without coverage.

— **One profile, two care modes** — a single caregiver/clinician profile serves both in-person home visits and virtual consultations from one booking flow.

— **Digital patient card** — a persistent record identifier without a full patient portal.

SUCCESS METRICS

Acquisition & booking

— App downloads & registrations

— Digital booking rate

— Booking conversion

— Membership / package conversion

Retention & value

— Repeat booking & cancellation rate

— Revenue per patient

— Patient satisfaction

— Care-plan completion rate

Recommended lead metric: care-plan completion rate — the strongest signal that the recovery-journey features are working, not just the booking flow.

06 · INVESTMENT

Your investment

COMPLETE APP DESIGN & DEVELOPMENT

iOS + Android apps, admin dashboard, native Nixpend integration, in-app payments, membership tiers, WhatsApp & voice wiring, QA & go-live — designed, built, tested and launched.

﷼ 46,000

one-time project fee · exclusive of VAT

PAYMENT SCHEDULE

MILESTONE	%	AMOUNT (SAR)
Advance — on sign-off & kickoff	50%	﷼ 23,000
Final — on UAT completion & go-live	50%	﷼ 23,000
Total	**100%**	**﷼ 46,000**

Exclusive of VAT. VAT (15%) will be added to each invoice as per KSA regulations.

THIRD-PARTY COSTS — CLIENT RESPONSIBILITY

Nixpend HIS/API, app-store fees and SMS/notification gateways are **not included** and are borne directly by Vitality. **Server hosting is included for the first year on a basic configuration**; from the second year, server hosting and maintenance are charged separately (see below).

SUPPORT & MAINTENANCE

ITEM	FEE
Complimentary Support Bug-fix support from go-live, at no charge	3 months included
Annual Maintenance Contract (AMC) SPECIAL DISCOUNT Bug fixes, security, OS and store updates, monitoring, minor changes · full detail in section 07	~~﷼ 6,900~~ **﷼ 5,000** / year
Server Hosting & Maintenance Year 1 included on a basic configuration (standard cloud server sized for launch) · from year 2 billed annually, confirmed before renewal	Year 1 included then ﷼ 3,000 – 5,000 / yr (est.)
Advanced Infrastructure Load balancers, auto-scaling, high-availability setups — outside the basic configuration, client-paid	Quoted on request

All fees exclusive of VAT. New features, additional integrations or major changes are scoped and quoted separately.

07 · ANNUAL MAINTENANCE CONTRACT

Support & maintenance after launch

Once the app is live, the Annual Maintenance Contract (AMC) keeps it secure, compatible with new phone software, accepted by the app stores and working as delivered, with the team that built it on hand when something goes wrong.

ANNUAL MAINTENANCE CONTRACT

Starts when the 3-month complimentary support period ends · 12-month term · billed annually in advance · renewable by agreement

~~6,900~~ ₦ **5,000**

per year · special discount · exclusive of VAT

WHAT THE AMC INCLUDES

AREA	WHAT WE DO
Bug fixes & corrective maintenance	Fixing defects, crashes and errors in delivered features across the iOS and Android apps, the admin dashboard and the backend.
Security	Security patches, library and dependency updates, SSL certificate renewal, and fixes for reported vulnerabilities.
iOS & Android compatibility	Updates for new iOS and Android versions and new devices, plus the SDK and target-level updates the stores require.
App store compliance	Changes needed to meet new App Store and Google Play policies, privacy-label updates, and publishing maintenance releases.
Monitoring & incident response	Crash reporting, server uptime and error alerts, and investigation and recovery when an incident occurs.
Integration upkeep	Fixes when an existing integration (Nixpend, payment gateway, WhatsApp, voice agent, GA4) stops working within the delivered scope, including minor endpoint changes.
Backups & data	Regular database backups on the hosted server, backup checks, and restore support when needed.
Minor changes	Small updates to text, images, banners, prices, service lists and settings: **up to 8 hours per month**; unused hours do not carry over.
Technical support & reporting	Email and a shared WhatsApp group for the Vitality team, tracked requests, and a short monthly maintenance report.

Response times, exclusions and AMC conditions continue on the next page.

07 · ANNUAL MAINTENANCE CONTRACT — CONTINUED

Response times, exclusions & conditions

SUPPORT HOURS & RESPONSE TIMES

Support hours are **Sunday to Thursday, 9:00–18:00 (KSA time)**. Critical (P1) issues raised outside these hours are handled on a best-effort basis.

PRIORITY	EXAMPLE	FIRST RESPONSE	TARGET RESOLUTION
P1 · Critical	App down, or bookings or payments failing for all users	2 hours	Fix or workaround within 1 business day
P2 · High	A key feature not working for some users	4 business hours	Within 3 business days
P3 · Normal	Minor bug or display issue	1 business day	Next maintenance release
P4 · Request	Minor change: text, image, price or setting	2 business days	Scheduled within monthly hours

Resolution targets apply to issues within Code-Ox's control. Issues caused by a third party are escalated to that provider and tracked until closed.

NOT INCLUDED IN THE AMC

- ✕ **New features, screens or modules** — quoted as change requests
- ✕ **New integrations, or major changes to existing ones** — e.g. a Nixpend API redesign
- ✕ **App redesign or rebranding** — or major UX changes
- ✕ **Server hosting from year 2** — est. ৳3,000 – 5,000 / year; advanced infrastructure client-paid
- ✕ **Third-party fees** — Nixpend, store accounts, SMS / WhatsApp, gateway
- ✕ **Issues caused by others** — outages, or changes by Vitality or other vendors
- ✕ **Content and training** — content, data entry, training beyond handover
- ✕ **Minor changes beyond the monthly hours** — billed separately at agreed rates

AMC CONDITIONS

- **Start & term.** The AMC starts the day after the 3-month complimentary support period ends and runs for 12 months.
- **Renewal.** Renewable each year by agreement; the renewal amount is confirmed 30 days before the term ends.
- **Access.** Vitality keeps Code-Ox's access to the app-store accounts, server and Nixpend credentials current, so updates can be released.
- **Without an AMC.** Support is provided on a time-and-material basis, and security, compatibility and store-compliance updates are not guaranteed.

08 · TIMELINE

Indicative schedule — 9 weeks

> The schedule below is **indicative**. Actual timing depends on Nixpend API readiness, feedback turnaround and scope confirmation at kickoff. Stages may overlap.

PHASE	DURATION
1 · Discovery & Scope Sign-Off Confirm scope against existing strategy, Nixpend API contract, district list, environment setup	Weeks 1–2
2 · Core Build Booking & program engine, Nixpend integration, in-app payments, membership tiers	Weeks 2–6
3 · App UI — iOS & Android Full app build both platforms, admin dashboard, WhatsApp & voice wiring	Weeks 5–8
4 · QA & Go-Live Testing, UAT support, store submission, production deployment and handover	Weeks 8–9
Indicative total	**9 weeks**

09 · OPEN DECISIONS & ASSUMPTIONS

- **Nixpend payment API contract** — the methods, refund process and settlement reporting Nixpend supports for in-app payment must be confirmed. **This blocks finalising the payment flow** and is a hard dependency for the build.
- **Nixpend API access** — client provides API/webhook access and credentials from kickoff (availability read, booking write, payment). If any is not exposed as an API, that is a scope and timeline risk to re-assess.
- **Service-area districts** — the covered Riyadh districts must be reconciled from earlier planning into one official list.

10 · TERMS

Terms & conditions

1. **Scope.** Work is limited to the scope set out in this proposal. Features outside this scope — including future phases — are quoted and agreed separately.
2. **Fees & payment.** The project fee is ৳ 46,000 exclusive of VAT, payable per the milestone schedule set out above.
3. **Responsibilities.** Vitality provides Nixpend API access and credentials, and timely feedback and testing access within agreed deadlines. Code-Ox commits to regular progress updates, early flagging of dependencies, and delivery to the agreed scope. Timelines assume reasonable, timely input from both parties; delays on either side are handled by mutual agreement.
4. **Third-party costs.** Nixpend HIS/API, app-store, SMS/notification and payment-gateway charges are not included and are Vitality's responsibility, billed directly by those providers. Server hosting is provided by Code-Ox as set out in section 06.
5. **Intellectual property.** On receipt of full payment, all custom code and deliverables become Vitality / Burjeel Holdings' property. Third-party libraries remain under their own licences.
6. **Data protection.** Personal and health data handling follows Saudi PDPL. Vitality is the data controller; Code-Ox acts as processor for the build and agreed support scope.
7. **Support & maintenance.** After 3 months of complimentary support from go-live, the Annual Maintenance Contract set out in section 07 applies.
8. **Server hosting.** Hosting on a basic configuration is included for the first year; from the second year, hosting and any advanced infrastructure are charged as set out in section 06.
9. **Confidentiality, law & validity.** Both parties keep this proposal confidential. Governed by the laws of the Kingdom of Saudi Arabia. Valid for 30 days from the date of issue.

11 · NEXT STEPS

Getting started

Four steps to move from proposal to a live app.

1. **Walk through this proposal** against the original BRD and confirm the feature scope.
2. **Resolve the open decisions** — above all, the Nixpend payment API contract, since it blocks payment-flow design.
3. **Confirm the terms** and the payment schedule, and finalise the investment figures.
4. **Kick off** — on the signed proposal and advance payment, we begin discovery sign-off and environment setup.
