

Website Revamp — alsabercars.com

A complete rebuild of the Al Saber Cars website from scratch — new brand-led design, built for a dealer of used sports and premium vehicles, replacing the current site rather than patching it.

CLIENT	PREPARED BY	DATE	STATUS
Al Saber Cars, Riyadh	Code-OX	July 2026	Draft — pending sign-off

SOURCE

Website Audit Report, 9 Jul 2026

Purpose & Scope

The current site (audited 9 July 2026, scored 46/100) is a template-based build that is slow, invisible to search, and loses buyers at the point of purchase. Rather than patch it, this document scopes a **full rebuild from scratch** on a new brand-led design system suited to what Al Saber actually sells: used sports cars and premium vehicles, not economy inventory.

In scope

- New visual identity and design system reflecting a premium/sporty dealer, built on Al Saber's existing brand tokens
- Full rebuild of every page: home, inventory/browse, car detail, purchase/enquiry, brand pages, about, contact
- SEO built in from day one (not retrofitted): metadata, structured data, sitemap, performance
- SEO Management Module — an admin panel so staff control search metadata without a developer
- Financing and trust-signal features standard in the premium-used-car category
- Bilingual Arabic/English, mobile-first

Out of scope

- Native mobile app (separate pitch document)
 - Ongoing SEO campaign management and content production (separate SEO proposal)
 - Inventory/DMS back-office beyond what the site's admin needs
-

Brand & Visual Direction

Al Saber sells used sports and premium vehicles — the site should feel like a dealer of that inventory, not a generic classifieds template. Direction: **dark, engineered, editorial** — closer to a manufacturer configurator site than a marketplace listing page.

Why dark

A dark canvas is the correct choice for this inventory specifically: chrome, paint, and headlights photograph better against navy than white. Every premium car configurator (Porsche, Ferrari, Bentley) uses a dark or dark-staged canvas for exactly this reason.

Design tokens — already established for Al Saber, reused here

TOKEN	HEX	ROLE
Background	#0A111C	Page canvas
Panel	#121E30	Cards, sheets
Accent (cyan)	#2FA9D8	Structure, CTAs, price — the "instrument light"
Accent bright	#7BCCEC	Numerals, prices, bright highlights
Alert (red)	#E8442A	Urgency/operational only — never used for price
Text primary	#F2F6FA	Body copy

Fonts: **Chakra Petch** for headings, **Rajdhani** for prices/specs/numerals, **Titillium Web** for body copy, **JetBrains Mono** for labels and meta text. All four are already in use on the existing brand system — the rebuild continues it, it doesn't reinvent it.

Two registers, one system

Al Saber's inventory spans both a used-Elantra-range buyer and a Ferrari/Rolls-Royce buyer — these are genuinely different emotional needs, and the site should not show both the same way:

VIP inventory (Ferrari, Rolls-Royce, Bentley, Porsche tier)

- Full-bleed editorial photography, minimal chrome
- Understated pricing — "Request viewing" over a shouted number

Standard inventory (mainstream used cars)

- Monthly-payment-first pricing, upfront
- Trust badges front and center (inspection, warranty)
- Rounded cards (8px radius) — approachable feel

- Sharp/square edges (0px radius) — engineered feel
- Concierge contact, not a generic form
- WhatsApp/call CTA, fast transactional path

Both registers share the same tokens and components — the site never feels like two sites bolted together, only two moods within one system.

Reference points used for this direction (from the competitive research already done for Al Saber): Porsche's disciplined, named-token design system; Bentley's swatch-driven configurator; Ferrari's cinematic dark staging and role-based navigation; Syarah's monthly-payment-first, trust-badge-heavy approach for standard inventory. Full detail in `mobile-app-design-spec.md`.

03

Business Objectives

1. **Look like what it sells.** A premium/sporty dealer site, not a generic template — first impression matches the inventory.
 2. **Be findable.** Full SEO built into the rebuild from day one — the current site is structurally invisible to search (empty metadata, no sitemap, zero structured data).
 3. **Be fast.** Current measured mobile LCP is 57.5 seconds on a 34MB payload. Target: under 3 seconds.
 4. **Convert the buyer.** The current purchase flow drops the car the buyer selected and interrogates finances before any contact. Fix the flow, add financing and trust signals standard for this category.
-

Site Structure

PAGE	PURPOSE
Home	Hero inventory feed, search/filter entry, VIP arrivals highlight, trust signals
Browse / Inventory	Filterable list — condition, brand, year, price, mileage, gearbox, fuel type
Car Detail	Full gallery, specs, price, financing calculator, contact CTAs — VIP or Standard treatment depending on tier
Purchase / Enquiry	Short lead form pre-filled with the selected car; finance details as an optional follow-up
Brand pages	Per-manufacturer landing pages (Ferrari, Porsche, Mercedes, etc.) for SEO and browsing
About	Dealer credibility — years trading, CR number, certifications
Contact	Location, WhatsApp, call, showroom hours

Functional Requirements

Priorities: **MUST** (launch-blocking), **SHOULD** (first month after launch), **COULD** (fast follow).

Inventory & Browsing

ID	REQUIREMENT	PRIORITY
FR-1.1	Filterable inventory — condition, brand, year, price range, mileage, gearbox, fuel type	MUST
FR-1.2	VIP vs Standard visual treatment applied automatically by inventory tier	MUST
FR-1.3	Full-resolution gallery per car as real elements with alt text (not CSS backgrounds — current site's galleries are invisible to image search)	MUST
FR-1.4	Per-manufacturer brand landing pages	SHOULD
FR-1.5	Saved cars / stock alerts (no account behind the heart icon on the current site)	COULD

Trust & Financing

ID	REQUIREMENT	PRIORITY
FR-2.1	Trust badges on every standard-tier car — inspection points, warranty, return policy	MUST
FR-2.2	Inline financing calculator — down payment slider, term selector, live monthly-payment figure, SAMA-partner disclaimer	MUST
FR-2.3	Fully-loaded price shown before checkout — car + registration + tax, not a bare sticker price	SHOULD
FR-2.4	Concierge/VIP contact path for premium-tier cars — dedicated advisor line, not the standard enquiry form	SHOULD

Purchase & Conversion

ID	REQUIREMENT	PRIORITY
FR-3.1	The selected car carries into the enquiry form automatically (current site discards it into a 782-option dropdown)	MUST

FR-3.2	Short lead form first — name, phone, car; finance details become an optional follow-up, not the entry gate	MUST
FR-3.3	Per-car WhatsApp and call CTAs, carrying the car's name into the message	MUST
FR-3.4	Required fields, inline validation, correct input types (no number-spinners on money fields)	SHOULD

SEO Foundation

ID	REQUIREMENT	PRIORITY
FR-4.1	Unique meta title and description on every page and car listing, populated at build (not empty as today)	MUST
FR-4.2	One H1 per page with correct heading hierarchy	MUST
FR-4.3	XML sitemap auto-generated from live inventory, referenced in robots.txt	MUST
FR-4.4	Vehicle/Offer structured data (JSON-LD) on every car page; Open Graph tags so shared links preview correctly on WhatsApp	MUST
FR-4.5	Single canonical host (www), no duplicate apex/www content	MUST
FR-4.6	URL-based bilingual routing (/en/, /ar/) with hreflang pairs — not the current session-based language toggle, which hides English content from search entirely	SHOULD

SEO Management Module

The rebuild makes the site findable once. This module keeps it findable without a developer.

ID	REQUIREMENT	PRIORITY
FR-5.1	Meta title/description editor per page and per car, with sensible auto-generated defaults from car data	MUST
FR-5.2	Automatic sitemap regeneration when inventory changes — no manual step	MUST
FR-5.3	Redirect manager — sold cars 301 to their model/brand listing instead of a 404	MUST
FR-5.4	SEO health checklist per listing — flags a car missing photos, alt text, or a meta description	SHOULD
FR-5.5	Search Console verification and indexing status surfaced in the admin	COULD

Performance

ID	REQUIREMENT	PRIORITY
FR-6.1	WebP/AVIF image pipeline with responsive sizes and lazy loading below the fold	MUST
FR-6.2	Long-lived cache headers on all static assets	MUST
FR-6.3	Critical CSS inlined, non-critical JS/CSS deferred	MUST
FR-6.4	Async, searchable car selector (no page shipping 800+ inline options)	MUST

Security & Accessibility

ID	REQUIREMENT	PRIORITY
FR-7.1	Standard security headers (HSTS, CSP, X-Frame-Options, X-Content-Type-Options) — the site collects salary and bank data on the finance form	MUST
FR-7.2	Current JS dependencies kept on supported, patched versions	MUST
FR-7.3	Landmarks, labelled form controls, accessible names on all interactive elements	SHOULD
FR-7.4	No horizontal overflow at any mobile breakpoint; primary action visible on the first mobile screen	MUST

Acceptance Criteria

CHECK	PASS CONDITION
AC-1 · Brand	New design system reviewed and approved by AI Saber before build begins; VIP and Standard tiers visually distinct but recognizably one site
AC-2 · Search eligibility	Every page has a populated meta description and one H1; sitemap.xml returns 200 and lists all live cars; car pages validate as Vehicle JSON-LD
AC-3 · Speed	Mobile LCP under 3 seconds on home and a car detail page, measured by Google PageSpeed
AC-4 · Conversion	Opening the enquiry form from any car page shows that car pre-selected; short form submits with name, phone, and car only
AC-5 · SEO module	Staff can edit a car's metadata and create a redirect from the admin panel with no developer involved
AC-6 · Mobile	No horizontal scroll at 375px and 320px widths on any page

Delivery Phases

PHASE	COVERS
Phase 1 — Design	Brand-led design system, key page mockups (home, car detail, browse), client approval before build starts
Phase 2 — Core Build	Home, browse, car detail, purchase flow, SEO foundation, performance pipeline
Phase 3 — Admin & Polish	SEO Management Module, brand landing pages, bilingual URLs, accessibility pass, security hardening

Assumptions & Risks

- **Assumption:** Al Saber approves the design direction (Section 02) before build begins — a full rebuild cannot proceed on an unapproved visual system.
- **Assumption:** inventory data (make, model, year, price, specs, photos) is complete enough per car to populate the new site; gaps in current listings (some cars have thin descriptions) should be filled before or during migration.
- **Risk:** current inventory photography includes watermarked warehouse shots — a premium presentation may call for reshoots, which is outside this scope unless separately agreed.
- **Risk:** full rebuild means a cutover — a migration/redirect plan from old URLs to new is required so existing search rankings and shared links aren't lost.

Sign-off

Approved for build once both parties confirm the brand direction, scope, and phases above.
