

COMMERCIAL QUOTATION · SEPTEMBER 2026

Odoo Upgrade & Foodics → Odoo Migration for Urban Eats

Two services for Tara Holding's existing Odoo environment: an upgrade to the current stable release, and moving Urban Eats' point of sale off Foodics onto Odoo — with one system that runs every delivery aggregator.

- Odoo 18 → 19 Upgrade
- Foodics → Odoo POS
- Aggregator Hub
- WhatsApp Integration
- 5 Aggregators
- Built on Existing Odoo
- Multi-company ready

OFFICIAL ODOO PARTNERSHIP

Delivered by a Certified Odoo Silver Partner

Code-ox Technologies holds official Odoo Silver Partner status — authorised to sell, implement, configure and support Odoo ERP deployments, with direct access to Odoo's partner support channels.

- Official Partner
- Certified Team

QUOTATION NO. CX-TARA-2026-01	DATE 10 September 2026	CURRENCY SAR (Saudi Riyal)	PREPARED BY Code-ox Technologies
----------------------------------	---------------------------	-------------------------------	-------------------------------------

OVERVIEW

Executive Summary

Code-ox Technologies is pleased to submit this commercial quotation to Tara Holding for two services on your existing Odoo environment — the multi-company instance your internal team already runs for Abdullah Alkadi Company and Urban Eats.

Phase 1 upgrades that environment from Odoo 18 to the current stable release, carrying every customization across safely. **Phase 2** moves Urban Eats' point of sale off Foodics and onto Odoo, and consolidates every delivery platform — HungerStation, Keeta, Noon, Jahez and Mrsool — into a single aggregator hub. Both build directly on the Odoo you already own; nothing is rebuilt from scratch.

WHAT WE WILL DELIVER

- ✓ **Odoo 18 → 19 Upgrade**
Studio customizations — and, optionally, third-party modules — migrated and verified on 19.
- ✓ **Foodics → Odoo POS**
Menu, catalogue and restaurant setup moved onto Odoo POS, per brand.
- ✓ **Unified Aggregator Hub**
HungerStation, Keeta, Noon, Jahez & Mrsool in one system — orders, stock, menu, settlements.
- ✓ **WhatsApp Integration**
Automated order confirmations, status updates & customer messaging from Odoo.
- ✓ **ZATCA-Compliant POS**
Phase 2 e-invoicing on every sale, on the same instance.
- ✓ **Staged & Tested**
All work on a staging clone first — production stays live until you sign off.
- ✓ **Training & Go-Live Support**
Staff trained, with CodeOx on standby through cutover and hypercare.

OUR COMMITMENT

You already run Odoo and you're already multi-company. Our job is to extend what you own — not replace it. Every task below lands on your existing instance, staged and reversible, so production is never at risk.

1

PHASE 1

Odoo 18 → 19 Upgrade

Two options depending on how much of the current build must be carried across. Both are delivered on a staging clone first, fully tested, with production untouched until sign-off.

OPTION A

Studio-only upgrade

SAR 2,700 one-time

OPTION B

Studio + third-party modules

On evaluation

#	TASK & SCOPE DESCRIPTION
01	Full backup — database & filestore Complete backup of production before any work begins; rollback path kept throughout.
02	Staging clone & upgrade to Odoo 19 A staging copy of your instance is created and upgraded to the current stable release.
03	Studio customizations migrated & verified Custom fields & models, form / list / kanban views, automations & server actions, computed fields, custom reports, menus, access rights & record rules — all carried across and re-validated on 19.
04	Resolve deprecations & breaking changes Fix anything the 18 → 19 jump changes, including view/OWL-related adjustments.
05	Data-integrity checks Post-upgrade validation that records, links and balances are intact.
06	Regression testing & UAT Core business flows tested; you review and sign off on staging.
07	Production cutover & hypercare Scheduled go-live window with rollback plan, plus a short stabilisation period after.
08	Third-party modules — migration & compatibility Each of the 11 third-party modules (per our audit) installed on the 19-compatible release, inter-module conflicts resolved, and every flow they touch regression-tested.

HOW THE TWO OPTIONS WORK

Option A — Studio-only. Tara Holding purchases the latest compatible versions of all required third-party modules and shares the module details and source code with Code-Ox. On receipt, Code-Ox undertakes the complete Odoo 18 → 19 upgrade, including the necessary module migration and compatibility adjustments.

Option B — Studio + third-party. Code-Ox evaluates all installed third-party modules and apps, discusses the approach with your team, and handles them on Odoo 19 — priced on evaluation.

RECOMMENDATION — MCP INTEGRATION

MCP currently runs on the MuK IT community modules (*muk_mcp*, *muk_mcp_access*). For Odoo 19 we recommend sourcing MCP through **Much Consulting**, a top-tier Odoo Gold Partner — a partner-supported, maintained integration rather than a community dependency. Licence billed by the vendor.

2

PHASE 2

Foodics → Odoo & One System for Every Aggregator

Move Urban Eats' point of sale off Foodics and onto Odoo, and bring every delivery platform into a single hub — orders, menu, stock and settlements in one place.

#	TASK & SCOPE DESCRIPTION
01	Foodics data export & migration Menu, modifiers, categories, products and customers exported from Foodics and mapped into Odoo POS, per brand.
02	Multi-company / multi-brand setup Each Urban Eats brand and group entity set up as its own company — separate journals, taxes, pricelists, POS configs, receipt sequences and access — with inter-company rules and consolidated group reporting. Builds on and formalises the multi-company base your team already established.
03	Odoo restaurant POS configuration Sessions, payment methods, taxes, receipts, product combos, forced modifiers and pricing set up for how each brand runs.
04	Kitchen display & ZATCA POS invoicing Kitchen display configured and routed; ZATCA Phase 2-compliant invoicing on every sale.
05	Mada terminal pairing Payment terminal integration (Geidea / NearPay) where required.
06	Aggregator hub deployment The unified hub deployed on your Odoo (Odoo.sh / on-premise) — a single screen for every platform.
07	Connect HungerStation · Keeta · Noon · Jahez · Mrsool Inbound orders land straight in Odoo POS & kitchen — no tablets, no re-keying — subject to each platform's partner/API access.
08	Live stock, menu-out & status sync Auto-86 when an item sells out; one menu published to every platform; order status synced back to each app automatically.
09	Settlement reconciliation & reporting Commission & payout reconciliation per platform, with a true delivery-margin view.
10	WhatsApp Integration module WhatsApp connected to Odoo for automated order confirmations, status updates and customer messaging direct from POS / sales — one channel, no separate app.
11	Sandbox testing, training, go-live & hypercare Each platform tested in sandbox; staff trained; scheduled go-live with a stabilisation window.

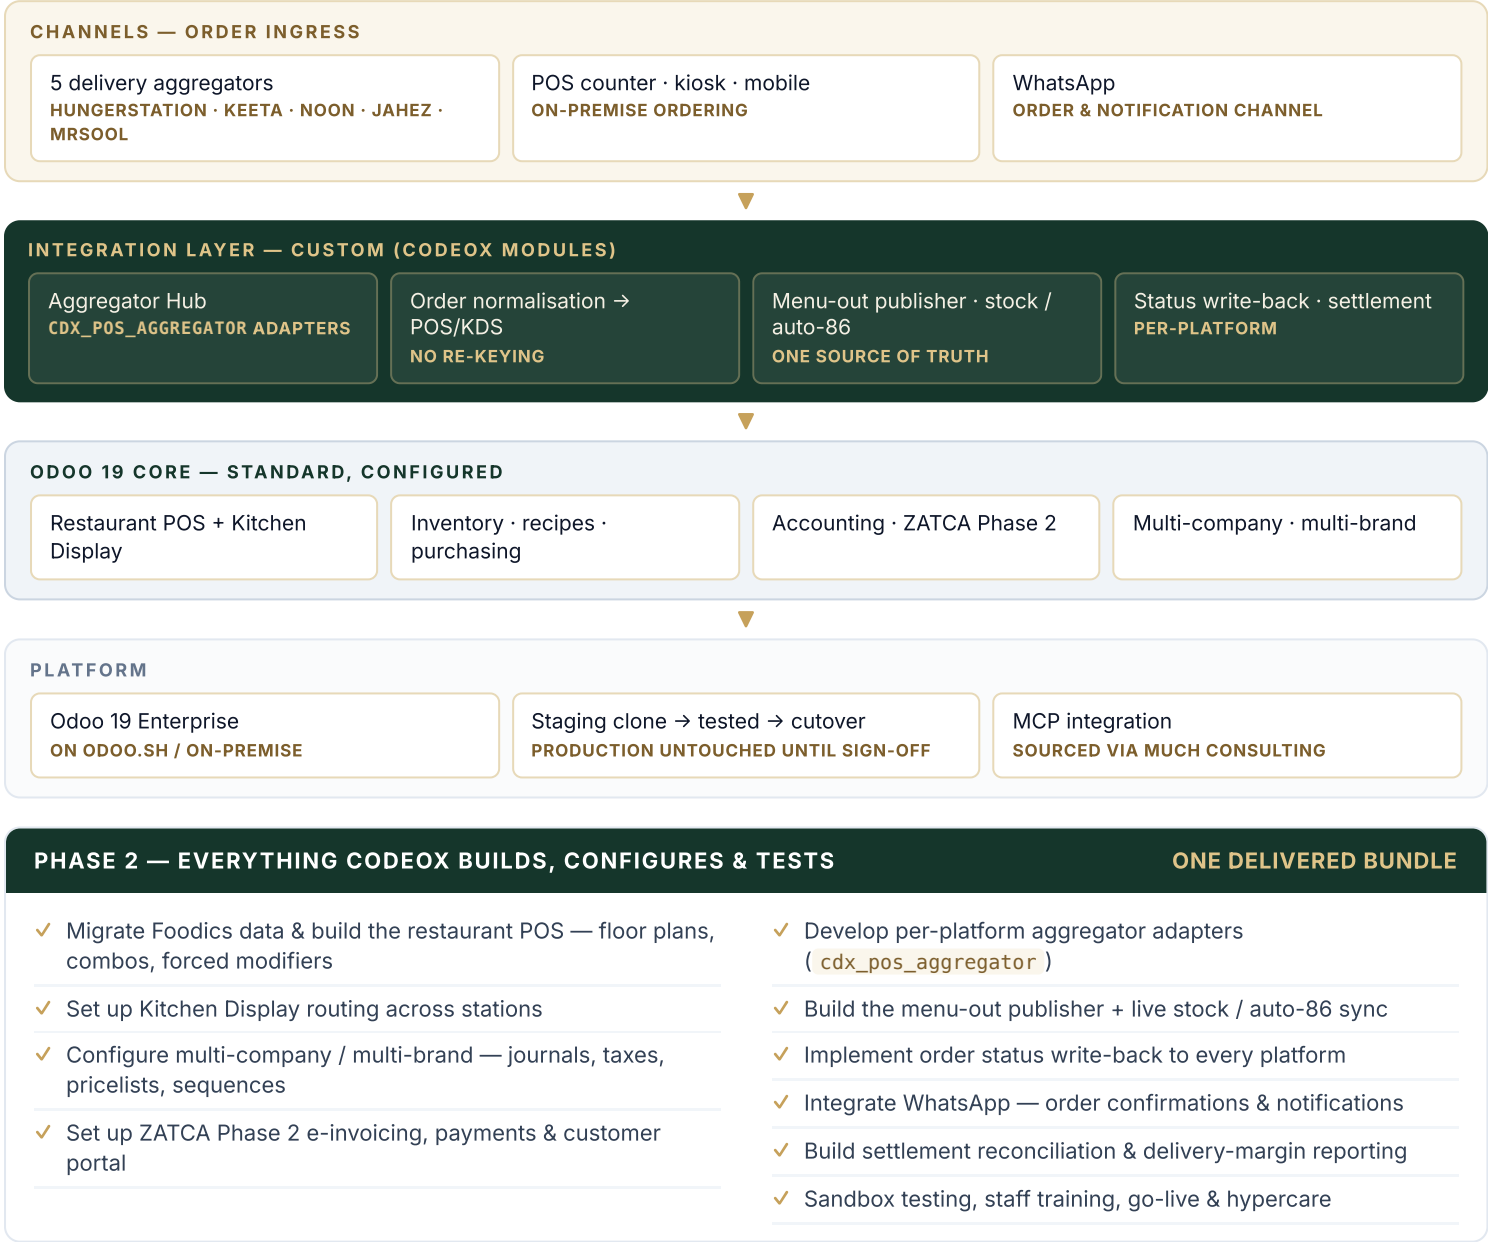

AGGREGATOR ONBOARDING

Connecting each platform requires POS-partner / API access granted by the aggregator (Jahez, HungerStation/Delivery Hero, Keeta, Noon, Mrsool). We initiate these requests at kick-off; approval timelines sit with the platforms and are outside CodeOx's control.

TECHNICAL APPROACH

Solution Architecture

Built to sit inside the Odoo instance you already run and hand cleanly to your in-house team. Every item below is implemented, configured and tested by CodeOx — delivered as one working bundle your developer can read, run and extend.

DELIVERY PLAN

Project Timeline

Two phases, billed and delivered independently. Durations are in working days from kick-off, once access, backups and Foodics data are provided. Aggregator connections depend on each platform's partner/API approval, which sits outside CodeOx's control.

Phase 1 — Odoo 18 → 19 Upgrade 2–3 working days

Studio-only upgrade on staging → test → cutover

Backup → staging clone & upgrade → Studio customizations migrated → regression + UAT → production cutover & hypercare. (Option B — Studio + third-party modules — scheduled on evaluation.)

Phase 2 — Foodics → Odoo & Aggregator Hub 30–40 working days

#	STAGE	WORKING DAYS
01	Discovery, Foodics export & data mapping Menu, modifiers, products, customers exported per brand and mapped into Odoo POS.	3–5
02	Multi-company / multi-brand build & POS migration Each brand as its own company; journals, taxes, pricelists, POS configs; Foodics data loaded.	7–10
03	POS, ZATCA Phase 2, KDS & Mada terminal setup Restaurant POS, kitchen display, compliant e-invoicing, payment terminal pairing.	5–7
04	Aggregator hub + 5 platform connectors HungerStation · Keeta · Noon · Jahez · Mrsool; stock/menu/status sync; settlement reconciliation. Subject to platform access.	8–10
05	WhatsApp integration, sandbox testing & training WhatsApp connected; each platform tested in sandbox; staff trained.	4–5
06	Go-live & hypercare Scheduled cutover with rollback plan and stabilisation window.	3

Stages overlap where dependencies allow; the 30–40 working-day range reflects the realistic band across all brands and aggregator approvals.

6 MONTHS SUPPORT & MAINTENANCE — INCLUDED

Every engagement includes **6 months of support and maintenance from go-live**, covering bug fixes, configuration adjustments, aggregator/connector monitoring and priority assistance for the delivered scope — at no extra cost. Extended support retainers are available on request once the period ends.

FINANCIALS

Investment Summary

DELIVERABLE	CATEGORY	AMOUNT (SAR)
PHASE 1 — ODOO 18 → 19 UPGRADE (SELECT ONE OPTION)		
Option A — Studio-only upgrade	Upgrade	SAR 2,700
Option B — Studio + third-party modules	Upgrade	On evaluation
Phase 1 Total — depends on option chosen		SAR 2,700 · Option A On evaluation · Option B
PHASE 2 — FOODICS → ODOO & AGGREGATOR HUB		
Foodics → Odoo POS migration & setup	Implementation	Included
Multi-company / multi-brand configuration	Implementation	Included
Unified Aggregator Hub — 5 platforms	Integration	Included
WhatsApp Integration module	Integration	Included
Testing, training, go-live & hypercare	QA & Launch	Included
Phase 2 Total		SAR 32,000

Phase 1 and Phase 2 are quoted and billed independently — each can be commissioned on its own. **SAR 2,700 is Option A (Studio-only)** — under it Tara Holding provides the third-party modules and Code-Ox migrates them. **Option B** — Code-Ox evaluates and handles the third-party modules — is priced on evaluation. All amounts exclusive of VAT.

Payment Schedule

MILESTONE	TRIGGER	AMOUNT (SAR)
PHASE 1 — ODOO 18 → 19 UPGRADE (OPTION A)		
Upgrade — 100%	Upon upgrade completion and staging sign-off	SAR 2,700
PHASE 2 — FOODICS → ODOO & AGGREGATOR HUB		
Advance (50%)	Upon Phase 2 sign-off and commencement	SAR 16,000
Balance (50%)	Upon training completion and go-live sign-off	SAR 16,000

* Phases are billed independently — each can be commissioned on its own. Amounts are exclusive of VAT (15%, added per KSA regulations).

COSTS NOT INCLUDED IN THIS QUOTATION

Odoo user licences and hosting (Odoo.sh / on-premise) are billed on your existing subscription and remain unchanged by this engagement. Aggregator or delivery-platform fees, any third-party module licences, and payment-terminal/Mada hardware are billed directly to Tara Holding by the respective provider.

TERMS & CONDITIONS

General Terms

- **Scope of Work:** This proposal covers the Odoo 18 → 19 upgrade and the Foodics → Odoo migration with aggregator hub as described. Any features outside this scope require a separate written agreement and may incur additional charges.
- **Client Responsibilities:** Tara Holding will provide timely access to the Odoo instance, a database + filestore backup, Foodics data, and feedback within agreed deadlines. Delays caused by the client may impact the timeline.
- **Licences & Hosting:** Odoo user licences and hosting are billed on the client's existing subscription and are not included in this quotation.
- **Aggregator Access:** Connecting each delivery platform depends on partner/API access granted by that aggregator. Approval timelines are set by the platforms and are outside CodeOx's control; any platform fees are billed to the client directly.
- **Revisions:** Configuration includes up to two (2) rounds of adjustment post-training. Additional rounds are charged separately at an agreed rate.
- **Support & Warranty:** Code-ox Technologies provides **6 months of support and maintenance from go-live** covering bug fixes, configuration adjustments and priority assistance for the delivered scope, at no extra cost. Extended support retainers are available on request thereafter.
- **Confidentiality:** Both parties agree to keep the contents of this proposal confidential and not to disclose them to any third party without prior written consent.
- **Governing Law:** This agreement shall be governed by the laws of the Kingdom of Saudi Arabia.

ASSUMPTIONS & EXCLUSIONS

Key Project Assumptions

- ☐ The Odoo instance is a working multi-company setup (Abdullah Alkadi Company + Urban Eats), already configured by the client's internal team.
- ☐ Client provides Odoo access and a database + filestore backup, and Foodics data export, within **5 business days** of kick-off.
- ☐ Under Option A (Studio-only), Tara Holding purchases the latest Odoo 19-compatible versions of all required third-party modules and shares the module details and source code with Code-Ox; on receipt, Code-Ox performs the upgrade, module migration and compatibility adjustments. Under Option B, Code-Ox evaluates and handles the modules (priced on evaluation). Where a vendor has no 19 release, we advise a like-for-like replacement (module/vendor fees separate).
- ☐ Aggregator partner/API access is granted by each platform; approval timelines are outside CodeOx's control.
- ☐ This engagement is an upgrade and migration of the existing build — new features or process redesign are scoped separately.
- ☐ This quotation is valid for **30 days** from the date of issuance.

AUTHORIZATION

Acceptance & Authorization

By signing below, both parties confirm acceptance of this commercial quotation and authorize the commencement of the project under the terms, scope, and payment schedule set out above.
