

DESIGN PROPOSAL · 18 SEPTEMBER 2026

A bespoke website, designed around how Benchy sells furniture.

A complete, bespoke redesign of benchy.in — designed and built around your product range, your customers, and the way people choose office and ergonomic furniture. Delivered end to end: clearer product discovery, stronger presentation, easier navigation and simpler ways to enquire.

- Design + Development
- Next.js 16 · Built-in CMS
- SEO + Analytics-ready
- Responsive desktop & mobile

PROPOSAL REF. CX-BEN-2026-01	DATE 18 September 2026	CURRENCY INR (₹)	PREPARED BY Code-Ox Technologies
---------------------------------	------------------------------	---------------------	--

01 · THE BRIEF

Project overview & our understanding

Benchy has asked us to **revamp its existing website, benchy.in, with a proper bespoke design**. Today the site presents a broad and capable furniture range — workstations, office tables, chairs, reception tables, height-adjustable desks, storage solutions, conference tables, pantry tables and workpods — but on a design that no longer does that range justice or makes it easy for a buyer to explore.

This is a **full website design and development project**: we **design and build** a cohesive, brand-appropriate website tailored to Benchy's products and customers, and deliver it live. It is built on a modern **Next.js 16** stack with a **content management system (CMS)** so your team can update content, comes with **on-page SEO**, and is made **analytics-ready** so your team can connect Google Analytics. The value is practical — a visitor can find the right furniture faster, see it presented well, move around the site with confidence on any device, and reach out to enquire without friction.

02 · OBJECTIVES

What the redesign sets out to achieve

Clearer product discovery

Help visitors move from a broad range to the exact category and product they need, quickly.

Stronger presentation

Show Benchy's furniture with the photography, layout and detail it deserves.

Easier navigation

A consistent, predictable structure across categories, products and content.

Speed & mobile

Fast-loading pages that read and work well on phones, where much browsing now happens.

Accessible enquiry paths

Make it obvious and simple to get in touch and request information.

A cohesive brand feel

One consistent visual language across every page, from home to contact.

We are focused on design quality and usability. This proposal does **not** promise increased leads, search rankings or revenue — those depend on many factors beyond design alone.

03 · APPROACH

A cohesive, bespoke design approach

Rather than fitting Benchy into a generic template, we design a considered system tailored to your brand and your range — so every page feels part of the same whole, and each product is easy to understand and act on.

- **Brand-appropriate visual direction** — a look and tone developed around Benchy's furniture, customers and market, agreed with you during discovery.
- **Clear information hierarchy and navigation** — a structure that guides a visitor from range, to category, to product, to enquiry.
- **Consistent typography, colours, spacing and components** — a single design language applied across every page.
- **Strong furniture photography and product presentation** — layouts built to show products, features and specifications clearly.
- **Responsive desktop and mobile layouts** — each design considered for large screens and phones.
- **Accessible contrast, readable text and usable form states** — designs that are comfortable to read and simple to use.
- **Clear enquiry calls to action** — obvious, well-placed ways to get in touch on every relevant page.
- **Shared header and footer, reusable components and templates** — consistent global framing, so the whole site stays on-brand and is efficient to extend.
- **Built, not just designed** — we develop the site to match the designs and launch it live, rather than hand over drawings.

BUILT ON A MODERN STACK

The site is developed on **Next.js 16** — a fast, modern React framework — with a **built-in CMS** so your team can edit content without touching code. Brand specifics such as final colours and typography are agreed with you during discovery, informed by your brand assets and priorities.

04 · SCOPE

What we'll design & build

We design **and build** the pages and reusable templates that make up Benchy's website. Several are **reusable templates** — one design shared by every category, product, portfolio item or article — keeping the whole site consistent.

DESIGN	REFERENCE / EXAMPLES	PURPOSE
1 · Home	benchy.in	Introduce the brand, communicate its value, showcase key furniture categories, and guide visitors toward products and enquiries.
2 · About	/about/	Present the brand story, values, design approach, craftsmanship and ergonomic focus.
3 · Company Profile	/company-profile/	Present company capabilities and business credentials using client-approved information — distinct from About. No certifications, capacity, customer names or achievements are invented.
4 · Products Overview	/products/	A clear gateway into the full product range.
5 · Product Category TEMPLATE	/office-tables/ · /chairs/ · /work-station/ · /reception-tables/ · /height-adjustable-table/	One reusable category design. Content and imagery vary per category; substantially different layouts would need a separate scope agreement.
6 · Product Detail TEMPLATE	/chairs/silla/ · /giro/ · /mode/ · /eco/	A reusable layout for imagery, descriptions, features, available specifications and enquiries. Does not assume e-commerce, online payments, live stock or product configuration.
7 · Portfolio Detail TEMPLATE	/portfolio/item/workstations/ · /office-tables/ · /workpods/	A reusable visual showcase layout. Existing entries appear to represent furniture categories; they are not described as completed customer projects without confirmation.
8 · Blog Listing	/blog/	A clear, readable article-discovery experience.
9 · Blog Article TEMPLATE	/blog/types-of-office-chairs/	A reusable article layout with strong reading hierarchy, imagery and relevant next steps.
10 · Contact	/contact/	Make it easy to enquire, using client-approved contact details and a working enquiry form.
11 · Portfolio Listing	/portfolio/category/gallery/	A dedicated portfolio overview that leads visitors into the portfolio detail pages.

ALSO INCLUDED — BUILD, PLATFORM & SETUP

Development on **Next.js 16** (front & back end) · **Built-in CMS** to edit content without code · **On-page SEO** (meta, clean URLs, sitemap, structured data) · **analytics-ready** (connect your Google Analytics) · working **enquiry form** · responsive build · **launch & deployment** — all in the package price.

05 · DELIVERABLES

What you receive

The engagement delivers a complete website — designed, built and launched — along with the platform and setup your team needs to run it.

A Designed & built pages

All the pages and reusable templates in scope — bespoke-designed and fully developed, responsive across desktop and mobile.

B Built on Next.js 16

A fast, modern front end hand-built to match the designs, with reusable components and a shared header and footer.

C Content management system

A CMS so your team can update text, images, products and articles yourself — no code needed.

D SEO setup

On-page SEO built in — meta tags, clean URLs, a sitemap and structured data — so the site is search-ready at launch.

E Analytics-ready

The site is set up so your marketer can connect your Google Analytics account and see traffic in your own Google console.

F Launch & handoff

The site deployed live, plus a short handover so your team knows how to manage content.

DESIGN AND DEVELOPMENT — END TO END

This is a complete **design-and-build** engagement: we take Benchy's website from concept through to a live, working site on Next.js 16, with a CMS, on-page SEO, and ready to connect to your Google Analytics. It is not a design-only handoff.

PLATFORM

Technical stack

The website is built on a modern, proven stack — chosen for speed, search-friendliness and an easy content experience for your team. Final choices within this stack are confirmed with you at kickoff.

FRAMEWORK

Next.js 16 (React)

A fast, modern React framework with server-side rendering — quick to load, reliable, and search-engine friendly.

CONTENT

Built-in CMS

A content-management admin built into the Next.js app, so your team edits text, images, products and articles — no code required.

FRONT END

Responsive component system

A reusable component and design system, mobile-first, consistent across every page and device.

DISCOVERABILITY

On-page SEO

Meta tags, clean URLs, an XML sitemap and structured data built in, so the site is search-ready at launch.

INSIGHT

Analytics-ready

Set up so your marketer can connect your Google Analytics account and view traffic in your own console.

HOSTING

VPS (recommended)

A VPS tuned for Next.js — set up and deployed by us. Hosting & domain are billed by the provider.

WHY THIS STACK

Next.js on a VPS gives a **fast, secure, SEO-friendly site** that scales with Benchy, while the built-in CMS keeps day-to-day content changes in your team's hands. It avoids the bloat and speed issues of a heavy page-builder setup.

PERFORMANCE

A faster website

How quickly a site loads shapes whether visitors stay, browse the range and enquire. On Google's PageSpeed Insights, Benchy's current site scores **49 on desktop and 33 on mobile** — the rebuild is engineered to change that.

CURRENT SITE — TODAY

Performance on desktop · **33** on mobile (out of 100)

AFTER REBUILD — OUR TARGET

What we build the new site to achieve

WHAT WE PROPOSE

Built on **Next.js 16** and tuned during development — optimised images, lean code, fast server-side rendering and modern web best practices — we **target a performance score above 80**, a substantial step up from 49 (desktop) and 33 (mobile) today. Measured on **Google's PageSpeed Insights / Lighthouse** — the same tool used to review the site today. Slow points on the current site, such as a Largest Contentful Paint of 3.1s on desktop (17.1s on mobile) and layout shift, are exactly what the rebuild addresses.

WHY PERFORMANCE MATTERS

Visitors stay longer

Slow pages lose visitors before they ever see Benchy's furniture. A fast site keeps them browsing.

Better on mobile

Most browsing happens on phones, often on slower connections — where load speed matters most.

Search-engine friendly

Search engines factor page speed and Core Web Vitals into how pages are surfaced.

A professional impression

A fast, smooth site reflects the quality and craftsmanship of Benchy's products.

06 · INVESTMENT

Your investment

COMPLETE DESIGN & DEVELOPMENT

Bespoke design and full build of the website on Next.js 16 — designed, developed, tested and launched.

₹82,500

one-time project fee · all-inclusive

WHAT THE FEE COVERS

AREA	INCLUDED
Design	Bespoke design of all 11 pages & reusable templates, shared header/footer and a reusable component system.
Development	Front-end & back-end build on Next.js 16 , responsive across desktop and mobile, with a working enquiry form.
Content (CMS)	A built-in content management system so your team edits text, images, products and articles without code.
SEO & analytics	On-page SEO (meta tags, clean URLs, sitemap, structured data) and analytics-ready for your Google Analytics.
Launch	Testing across devices, deployment live, and a short handover for your team.

PAYMENT SCHEDULE — proposed, to be agreed

MILESTONE	%	AMOUNT (₹)
On acceptance / kickoff	40%	33,000
On design sign-off	30%	24,750
On launch	30%	24,750
Total	100%	₹82,500

RECOMMENDED HOSTING — A VPS FOR NEXT.JS

A Next.js site runs best on a **VPS (virtual private server)** rather than basic shared hosting. We recommend a modest VPS (around **2 vCPU / 4 GB**) and can set it up and deploy for you. Hosting & domain are billed **directly by the provider** — not part of the project fee.

07 · PROCESS

How we deliver

- 1 Discovery & structure** — understand Benchy's brand, products and priorities; agree the site's information architecture; gather brand assets and product information.
- 2 Visual direction & design** — establish the design language, then design the pages and reusable templates for desktop and mobile.
- 3 Development** — build the front end on **Next.js 16** to match the designs, wire up the enquiry form, and set up the **CMS** so content is editable.
- 4 SEO & analytics-ready** — implement on-page SEO and set the site up so your team can connect Google Analytics.
- 5 Review & testing** — present the site, test across devices, gather your consolidated feedback, and refine to an agreed point.
- 6 Launch & handoff** — deploy the site live and hand over a short guide so your team can manage content.

08 · INDICATIVE SCHEDULE

The schedule below is **indicative and proposed**. Actual timing depends on content availability, scope confirmation and the speed of feedback and approvals. No delivery deadline has been agreed.

STAGE	INDICATIVE DURATION
Design Discovery, visual direction and page design	≈ 1-2 weeks
Development Build on Next.js 16, CMS, SEO, analytics-ready, testing & launch	≈ 3 weeks
Indicative total	≈ 4 weeks

Durations are proposed for planning only and are confirmed once scope, content readiness and a revision approach are agreed. Stages may overlap.

09 · CLIENT RESPONSIBILITIES

What we'll need from Benchy

A bespoke design is only as strong as the material behind it. To keep the work moving and true to your brand, we'll need brand assets (logo, guidelines, references), good-quality product imagery, accurate specifications, approved copy, client-approved contact details, and a single consolidated set of feedback at each review point.

10 · EXCLUSIONS & ASSUMPTIONS

Not included — separately confirmable or quotable

Design, development, CMS, on-page SEO and analytics-ready setup are all included in the ₹82,500 package. The following are **not** included and are paid directly to providers or quoted separately:

- **Hosting & domain** fees (paid to the provider)
- **Ongoing maintenance** & support after launch
- **Copywriting** & content writing
- Professional **photography**
- Paid **stock assets** & translations
- Bulk **content migration** beyond the agreed pages

- **E-commerce** / online payments
- Advanced product configuration
- Ongoing **SEO campaigns**, link building or paid ads
- Third-party integrations beyond CMS & analytics
- Additional unique layouts or functionality
- Anything not listed in this scope

INCLUDED — ANCILLARY PAGES

The site's ancillary pages — Privacy Policy, Grievance and the brochure pages — are **included** in the package and built to an agreed standard layout consistent with the new design.

11 · TERMS & CONDITIONS

Terms & conditions

These terms apply to the engagement described in this proposal and are confirmed on acceptance.

- 1 Scope.** Work is limited to the scope set out in this proposal — 11 pages, front-end & back-end build on Next.js 16, a built-in CMS, on-page SEO, analytics-ready setup and launch. Changes or additions beyond this scope are quoted and agreed separately.
- 2 Fees & payment.** The project fee is **₹82,500**, payable per the milestone schedule (40% on kickoff, 30% on design sign-off, 30% on launch). Invoices are due within 7 days. Work on each stage begins on receipt of that stage's payment.
- 3 Revisions.** Up to **two (2) rounds** of revisions are included at the design stage and at the build stage. Additional rounds are charged separately at an agreed rate.
- 4 Timeline.** The indicative timeline is ~4 weeks (1–2 weeks design + 3 weeks development), dependent on timely content, assets and feedback. Delays in these move the timeline accordingly.
- 5 Client responsibilities.** Benchy provides brand assets, product imagery, accurate specifications, approved copy and a single consolidated set of feedback promptly at each stage.
- 6 Third-party costs.** Hosting, domain, paid stock, plugins and similar third-party costs are borne by Benchy and paid directly to the providers.
- 7 Intellectual property.** On receipt of full payment, the custom design and code delivered become Benchy's property. Third-party frameworks and libraries (e.g. Next.js and open-source components) remain under their own licences.
- 8 Warranty & support.** 30 days of complimentary bug-fix warranty apply after launch. Ongoing maintenance and support are available on a separate retainer.
- 9 Performance.** We target a Lighthouse / PageSpeed performance score above 80. Actual scores also depend on final content, images and hosting. Search rankings, traffic, leads or revenue are not guaranteed.
- 10 Confidentiality.** Both parties keep the contents of this proposal and any shared materials confidential, without prior written consent.
- 11 Cancellation.** If the project is cancelled, fees for work completed up to that point are payable.
- 12 Governing law & validity.** This engagement is governed by the laws of India. This proposal is valid for 30 days from the date of issue.

12 · NEXT STEPS

Getting started

Three simple steps to move from proposal to a live, faster website.

- 1 **A short discovery conversation** to confirm scope and content readiness.
- 2 **Confirm the terms** and the payment schedule set out in this proposal.
- 3 **Kick off** — on the signed proposal and first milestone payment, we begin with discovery and gathering your brand assets and product content.
