

NADEC Website Redesign

Enterprise-grade system architecture, high-performance headless CMS implementation, and modern security frameworks built for scale.

- UX & UI Design
- Enterprise CMS
- Performance & SEO
- 24-Month Support

Website Infrastructure & Systems Proposal

SYSTEM QUALITY
Target SLA: 99.99% Uptime

Document Control & Reference Overview

This document contains the technical approach, implementation methodology, governance model, and delivery framework proposed by Code-OX Technologies in response to the NADEC Website Redesign RFP.

01 Proposal Version Version: v1.0 Status: Final Submission	02 Document Type Technical Proposal Website Redesign & Digital Transformation
03 Client National Agricultural Development Company (NADEC) Kingdom of Saudi Arabia	04 Submitted By Code-OX Technologies (Powered by We Care Technologies) Riyadh, Kingdom of Saudi Arabia
05 RFP Reference Project: NADEC Website Redesign Issued: 22 July 2026 RFP Ref: NADEC Website Redesign RFP	06 Submission Date 29 July 2026 (Update with the actual submission date before delivery.)
07 Proposal Validity 90 Calendar Days From the date of proposal submission.	08 Classification Level: CONFIDENTIAL Intended solely for the evaluation committee of NADEC. Distribution is prohibited.

Proposal Outline & Project Agenda

A structured overview of the technical approach, implementation methodology, and delivery framework proposed for the NADEC Website Redesign project.

- 01

Understanding of Requirements
Analysis of NADEC's objectives, project scope, mandatory deliverables, and strategic recommendations.
- 02

Delivery Model & Governance
Project delivery lifecycle, governance framework, approval gates, reporting structure, and change control.
- 03

Deliverable 1 – Website Design
Discovery, UX strategy, bilingual UI design, custom design system, and responsive component libraries.
- 04

Deliverable 2 – Umbraco CMS (Optional)
Enterprise CMS architecture, structured content models, secure editorial workflows, and integrations.
- 05

Legacy Website Migration
Content inventory audits, migration mapping, validation processes, URL preservation, and SEO continuity.

- 06

Quality Assurance & Deployment
Testing methodology, performance validation, KSA compliance, deployment planning, and rollback strategies.
- 07

Support, Training & Hypercare
Admin training, seamless knowledge transfer, post-launch warranty, and 24-month ongoing SLA maintenance.
- 08

Assumptions & Exclusions
Technical assumptions, customer dependencies, third-party integrations, and defined scope boundaries.
- 09

Compliance Matrix
Detailed cross-reference of all mandatory RFP requirements mapping directly to the proposed solution.

PROPOSAL INTEGRITY COMMITMENTS

Prepared in strict alignment with KSA digital frameworks, WCAG Accessibility standards, and high-performance headless architecture benchmarks.

Understanding of NADEC's Requirements

Based on our review of the RFP, we have aligned our delivery approach to address NADEC's strategic objectives, technical expectations, and long-term digital transformation goals.

Modern Digital Experience

Redesign NADEC's corporate website with a modern, intuitive, and brand-consistent digital experience that enhances usability, simplifies navigation, and strengthens the company's online presence.

- ✓ Modern visual identity
- ✓ Intuitive navigation
- ✓ Mobile-first experience
- ✓ Enhanced user engagement

Bilingual Digital Experience

Deliver a seamless bilingual platform that provides Arabic (RTL) and English (LTR) experiences with equal functionality, consistent design quality, localized URLs, and optimized typography.

- ✓ Arabic RTL support
- ✓ English LTR support
- ✓ Localized content
- ✓ Consistent user experience

Accessibility & Compliance

Ensure the platform complies with internationally recognized accessibility standards while providing an inclusive digital experience for all users.

- ✓ WCAG 2.1 AA compliance
- ✓ Keyboard navigation
- ✓ Screen reader compatibility
- ✓ Accessible user interfaces

Performance & SEO

Build a fast, search-engine-optimized website that delivers excellent performance across all devices while improving discoverability and Core Web Vitals.

- ✓ Core Web Vitals
- ✓ Technical SEO
- ✓ Fast page loading
- ✓ Optimized user experience

Secure & Maintainable CMS

Implement a secure, scalable, and governable content management platform that enables NADEC teams to manage bilingual content independently while minimizing vendor dependency.

- ✓ Umbraco CMS
- ✓ Editorial governance
- ✓ Secure architecture
- ✓ Scalable content management

Knowledge Transfer & Ownership

Provide complete documentation, editable source files, training, and technical handover to ensure NADEC retains full ownership and long-term operational independence.

- ✓ Source code handover
- ✓ Technical documentation
- ✓ Administrator training
- ✓ Long-term maintainability

OUR COMMITMENT

Our proposed delivery methodology has been developed in direct alignment with the mandatory and optional requirements outlined in the NADEC Website Redesign RFP. Every phase—from discovery and design through implementation, migration, testing, and handover—is structured to deliver a secure, scalable, bilingual, and future-ready digital platform that supports NADEC's long-term business objectives.

Recommended Strategic Improvements

To maximize the long-term value of NADEC's digital platform, Code-OX recommends the following strategic enhancements in addition to the mandatory project scope.

01 Component-Driven Design System Develop a centralized, reusable design system that standardizes UI components, visual styles, and interaction patterns across the website.	✓ Reusable UI component library ✓ Standardized typography and color system ✓ Responsive design guidelines ✓ Component documentation ✓ Editable design assets Outcome: Enable faster page creation, maintain brand consistency, and simplify future enhancements.
02 Performance by Design Integrate performance optimization and accessibility requirements from the earliest design stages rather than addressing them after development.	✓ Performance-first design approach ✓ Core Web Vitals optimization ✓ WCAG 2.1 AA accessibility planning ✓ Responsive optimization ✓ Technical SEO readiness Outcome: Improve website speed, search visibility, accessibility compliance, and overall user experience.
03 Structured Content Inventory Conduct a comprehensive content inventory during the discovery phase to identify duplicate, outdated, and obsolete content before migration.	✓ Content audit ✓ Content classification ✓ Duplicate identification ✓ Migration readiness assessment ✓ Content governance recommendations Outcome: Reduce migration risks, improve information architecture, and ensure only relevant content is migrated.

EXPECTED BUSINESS BENEFITS

• Operational Efficiency Reusable components and standardized processes reduce development effort and accelerate future updates.	• Improved User Experience Optimized performance, accessibility, and intuitive navigation provide a better experience across devices.	• Reduced Project Risk Early content assessment and structured planning minimize migration issues and improve delivery predictability.	• Long-Term Scalability A governed design system and structured content model provide a sustainable foundation for future growth.
--	---	--	---

These recommendations extend beyond the mandatory RFP requirements and are intended to enhance the long-term sustainability, maintainability, and business value of the NADEC digital platform while reducing future operational costs.

Delivery Model & Governance

Code-OX follows a structured, stage-gated delivery methodology that ensures transparency, quality assurance, stakeholder alignment, and controlled project execution.

PROJECT DELIVERY LIFECYCLE

GOVERNANCE FRAMEWORK

Deliverable 1 – Website Design

Deliverable 1 focuses on designing and developing a complete bilingual website experience, delivering production-ready static front-end templates aligned with NADEC's brand standards and technical requirements.

Discovery & Assessment

01

Establish a clear understanding of NADEC's business objectives, stakeholder expectations, existing digital assets, and project requirements through collaborative workshops.

✓ Stakeholder Workshops

✓ Website Assessment

✓ Requirements Baseline

✓ Discovery Report

Information Architecture & UX

02

Design an intuitive bilingual information architecture that simplifies navigation, enhances usability, and delivers a consistent user experience across Arabic and English.

✓ Information Architecture

✓ Sitemap

✓ User Journeys

✓ Wireframes

Bilingual UI Design

03

Create modern, responsive user interface designs that reflect NADEC's corporate identity while ensuring a seamless experience across desktop, tablet, and mobile.

✓ High-Fidelity UI

✓ Responsive Layouts

✓ RTL & LTR Designs

✓ Interactive Prototypes

Design System

04

Develop a reusable component library with standardized design principles to ensure consistency, scalability, and efficient future enhancements.

✓ UI Components

✓ Typography

✓ Color System

✓ Design Guidelines

Front-End Development

05

Transform approved designs into production-ready responsive templates using semantic HTML5, CSS3, JavaScript, and Tailwind CSS.

✓ HTML5

✓ Tailwind CSS

✓ JavaScript

✓ Reusable Components

Deliverables & Acceptance

06

Deliver complete design assets, editable source files, front-end templates, and documentation for formal review, approval, and handover to NADEC.

✓ Source Files

✓ Technical Documentation

✓ Static Templates

✓ Client Acceptance

Client Acceptance

DELIVERY OUTCOME

Upon completion, NADEC will receive a fully approved bilingual website design package, a reusable design system, and production-ready responsive front-end templates with complete editable source files and documentation, ready for deployment or integration with the optional Umbraco CMS implementation.

Information Architecture & User Experience

A well-defined information architecture and user experience strategy establishes the foundation for intuitive navigation, efficient content discovery, and a seamless bilingual experience across Arabic (RTL) and English (LTR) platforms.

Information Architecture

Objective: Develop a logical and scalable website structure that organizes content based on user needs and business priorities.

- 1 Review existing website structure
- 2 Organize content into logical categories
- 3 Simplify navigation hierarchy
- 4 Design bilingual information architecture
- 5 Validate structure with stakeholders

- ✓ Website Sitemap
- ✓ Navigation Structure
- ✓ Page Hierarchy
- ✓ Arabic & English Structure

EXPECTED OUTCOME

A clear, scalable information architecture that supports intuitive navigation, simplifies content management, and improves user engagement.

User Experience (UX)

Objective: Design user journeys that help visitors complete key tasks quickly and efficiently while maintaining a consistent experience across all devices.

- 1 Identify primary user groups
- 2 Define key user journeys
- 3 Develop low-fidelity wireframes
- 4 Optimize calls-to-action
- 5 Validate usability before visual design

- Corporate
- • Products
- • Investors
- • News
- • Careers

EXPECTED OUTCOME

A user-centered experience that reduces navigation complexity, improves task completion, and increases engagement.

OUTPUTS & DELIVERABLES

01

Bilingual Sitemap

A complete bilingual website structure defining all primary sections, navigation levels, and page relationships.

02

Wireframes

Low-fidelity layouts illustrating page structure, content placement, and user interaction before visual design.

03

Navigation Model

A streamlined navigation framework designed to improve usability, content discoverability, and accessibility.

04

Content Hierarchy

A structured organization of content that prioritizes business objectives while presenting information clearly.

Strategic Alignment: The approved Information Architecture and UX deliverables provide the strategic blueprint for all subsequent UI design and front-end development activities, ensuring a consistent, scalable, and user-focused digital experience.

Bilingual UI Design

Create a modern, responsive, and accessible bilingual user interface that delivers a consistent experience across Arabic (RTL) and English (LTR) platforms while maintaining NADEC's corporate identity.

01

Desktop & Responsive

Design a fully responsive interface across desktop, tablet, and mobile devices maintaining visual consistency.

✓ Desktop optimized

✓ Tablet responsive

✓ Mobile-first

✓ Touch interactions

02

Bilingual RTL & LTR

Arabic RTL mirrored layouts with localized typography and English LTR with identical functionality.

✓ Equal visual quality

✓ Mirrored layouts

✓ Language typography

✓ Localized URLs

03

Interactive Prototypes

Clickable prototypes for stakeholder validation of user journeys, interactions, and navigation before development.

✓ Homepage

✓ Corporate Pages

✓ Products

✓ Investor Relations

04

Design Specifications

Comprehensive design documentation to support accurate front-end implementation and styling accuracy.

✓ Grid System

✓ Typography Scale

✓ Color Palette

✓ Responsive Rules

DESIGN COVERAGE

- ✓ Homepage

✓ Corporate Pages

✓ Products & Categories

✓ News & Media
- ✓ Investor Relations

✓ Sustainability / CSR

✓ Careers

✓ Contact & Locations
- ✓ Search

✓ Forms

✓ Error Pages (404)

✓ Global Components

Deliverable 1 includes high-fidelity bilingual responsive UI designs, interactive prototypes, and complete design specifications covering all agreed website templates, reusable components, and user journeys. These approved designs form the foundation for front-end implementation and optional Umbraco CMS integration.

Enterprise Design System

A unified design system establishes reusable standards for visual identity, user interface components, accessibility, and responsive behaviour, ensuring consistency, scalability, and efficient future development.

T

01

Typography

- ✓ Heading Styles H1–H6
- ✓ Body Text Protocols
- ✓ Arabic Typography
- ✓ English Typography
- ✓ Font Weights System

02

Color System

- ✓ Primary Brand Colours
- ✓ Secondary Palette
- ✓ Neutral Tones
- ✓ Status & Semantic States
- ✓ Accessibility Contrast

03

Spacing & Layout

- ✓ Grid System (12-Col)
- ✓ Modular Spacing Scale
- ✓ Margins & Padding Rules
- ✓ Responsive Breakpoints

04

Buttons & Actions

- ✓ Primary Actions
- ✓ Secondary Controls
- ✓ Icon Buttons
- ✓ Multi-State Interactive
- ✓ Hover & Focus Effects

05

Forms & Inputs

- ✓ Standard Text Fields
- ✓ Selection Dropdowns
- ✓ Checkbox Systems
- ✓ Radio Buttons
- ✓ Validation Messages

06

Cards & Content

- ✓ General Content Cards
- ✓ Product Showcase Cards
- ✓ News & Media Cards
- ✓ Feature Blocks
- ✓ Promo CTA Panels

07

Navigation System

- ✓ Header Nav Structure
- ✓ Corporate Mega Menu
- ✓ Bilingual Breadcrumbs
- ✓ System Footer Mapping
- ✓ Responsive Mobile Nav

08

Tables & Data

- ✓ Structured Data Tables
- ✓ Responsive Flow Tables
- ✓ Sorting Controls
- ✓ Empty State Displays
- ✓ Pagination & Offsets

09

Icons & Visuals

- ✓ System Icon Library
- ✓ Illustrative Icons
- ✓ Status Indicators
- ✓ Visual System Badges
- ✓ Bilingual UI Symbols

10

Accessibility

- ✓ WCAG 2.1 AA Compliance
- ✓ Keyboard Nav Support
- ✓ Focus State Ring
- ✓ Contrast Preservation
- ✓ Touch Target Scaling

BENEFITS

Consistent Experience

Maintain a unified visual language across every page, device, and language seamlessly.

Faster Development

Accelerate future design and development using reusable, production-ready components.

Simplified Maintenance

Update shared components once and apply improvements consistently across the platform.

Scalable Foundation

Support future enhancements and digital services without redesigning existing interfaces.

System Output: The Design System will provide NADEC with a reusable component library, standardized design guidelines, and documented UI patterns that ensure long-term consistency, accessibility, maintainability, and scalability across the digital ecosystem.

Front-End Development

Approved UI designs are transformed into responsive, production-ready front-end templates using modern web technologies, ensuring performance, accessibility, maintainability, and seamless integration with future CMS implementations.

DESIGN-TO-CODE PIPELINE

DEVELOPMENT STANDARDS

- 01

Responsive Design
Mobile-first implementation optimized for desktop, tablet, and mobile layouts.
- 02

Semantic HTML
Standards-compliant markup for accessibility, clean structure, maintainability, and search visibility.
- 03

Accessibility
WCAG 2.1 AA considerations including screen reader support, keyboard navigation, and focus management.
- 04

Performance
Optimized code structure, asset optimization, lightweight styling, and efficient rendering pipelines for Core Web Vitals.
- 05

Maintainability
Modular directory structure, isolated component architectures, clean CSS inheritance, and thoroughly documented codebase.

DELIVERABLES

- ✓

Source Code
Complete clean-structured HTML, CSS, and vanilla JavaScript source files delivered securely.
- ✓

Component Library
A comprehensive catalog of isolated, reusable UI components mapped to the design system.
- ✓

Documentation
Step-by-step build environment instructions, dependency configuration sheets, and component API mapping details.
- ✓

Transfer of Ownership
Full intellectual property transition of final files, system assets, and structural code with zero vendor lock-in.

QUALITY CHECKLIST

- Responsive Layouts ✓
- Semantic HTML5 ✓
- WCAG 2.1 AA ✓
- Cross-Browser ✓
- Tailwind CSS ✓
- Reusable Components ✓
- Optimized Performance ✓
- Source Code Handover ✓

Platform Output: The approved designs will be delivered as production-ready, responsive front-end templates built with semantic HTML5, Tailwind CSS, and JavaScript. All source code, reusable components, build documentation, and editable assets will be transferred to NADEC, ensuring complete ownership and future maintainability without vendor lock-in.

Deliverable 1 Outputs & Acceptance

Upon successful completion of Deliverable 1, Code-OX will provide NADEC with a complete bilingual design package, production-ready front-end templates, and all supporting documentation required for implementation and future ownership.

OUTPUTS	ACCEPTANCE CRITERIA	DELIVERABLES
01 Discovery Documentation Requirements, workshop findings, and confirmed scope.	✓ Design Approval Formal sign-off on layouts and journeys by NADEC.	✓ Editable Design Files Fully structured Figma source files and original assets.
02 UX Deliverables Approved sitemap, bilingual wireframes, and journeys.	✓ Bilingual Compliance Arabic RTL and English LTR match in feature parity.	✓ Production Source Code Clean frontend assets zipped and delivered.
03 UI Design Package High-fidelity responsive LTR/RTL designs for all viewports.	✓ Responsive Validation Consistent rendering across desktop, tablet, and mobile.	✓ Component Library Isolated front-end module library matching system design.
04 Design System Reusable components, tokens, and accessibility patterns.	✓ Accessibility Compliance WCAG 2.1 AA keyboard and contrast audits.	✓ Technical Documentation Build environments instructions and dependency charts.
05 Front-End Templates Production-ready templates in HTML5, Tailwind CSS, and JS.	✓ Code Quality Semantic markup, clean Tailwind compilation, and modular JS.	✓ Licensed Assets Complete transfer of approved typography, icons, and media.
	✓ Formal Acceptance Signed sign-off document from designated stakeholders.	✓ Ownership Transfer Full IP handover with zero ongoing proprietary lock-in.

DELIVERABLE COMPLETION SUMMARY

Discovery Completed	✓	UX & IA Approved	✓	UI Design Approved	✓	Front-End Developed	✓	Documentation Delivered	✓	Client Acceptance Received	✓
---------------------	---	------------------	---	--------------------	---	---------------------	---	-------------------------	---	----------------------------	---

Deliverable Completion Summary: Deliverable 1 concludes with the successful delivery of a complete bilingual website design package, reusable design system, production-ready front-end templates, editable source files, and comprehensive technical documentation. All deliverables are formally reviewed, approved, and transferred to NADEC, ensuring complete ownership and readiness for deployment or optional Umbraco CMS implementation.

Umbraco CMS Implementation

Implement a secure, scalable, and enterprise-ready Umbraco CMS platform that enables NADEC to efficiently manage multilingual content, digital assets, workflows, and future integrations while maintaining complete ownership.

01

Content Types
Structured models for consistent creation

- ✓ Reusable Templates
- ✓ Page Types
- ✓ Product Content
- ✓ News & Articles
- ✓ Dynamic Modules

02

Media Library
Centralized digital assets & organized storage

- ✓ Images
- ✓ Videos
- ✓ Documents
- ✓ File Organization
- ✓ Asset Reusability

03

Content Workflows
Structured editorial governance pipeline

- ✓ Draft
- ✓ Review
- ✓ Approval
- ✓ Scheduled Publishing
- ✓ Version History

04

Roles & Permissions
Secure role-based access delegation

- ✓ Administrator
- ✓ Content Editor
- ✓ Publisher
- ✓ Department Access
- ✓ Permissions

05

Enterprise Search
Fast indexing across site & admin pane

- ✓ Content Search
- ✓ Filtered Results
- ✓ Metadata Search
- ✓ Fast Retrieval
- ✓ Admin Search

06

Forms Management
No-code digital form creation

- ✓ Contact Forms
- ✓ Enquiry Forms
- ✓ Validation Rules
- ✓ Email Notifications
- ✓ Data Export

07

SEO Management
Optimize visibility directly from CMS

- ✓ Meta Titles
- ✓ Meta Descriptions
- ✓ Open Graph
- ✓ Canonical URLs
- ✓ XML Sitemap

08

API Services
Secure headless endpoints for app consumption

- ✓ REST APIs
- ✓ Content Delivery
- ✓ Third-Party Connect
- ✓ Mobile Apps
- ✓ Secure Delivery

09

Enterprise Integrations
Seamless connection to internal systems

- ✓ ERP Systems
- ✓ CRM Platforms
- ✓ Analytics
- ✓ Marketing Platforms
- ✓ Auth Services

10

Docs & Training
Handover manuals and administrator training

- ✓ Admin Guide
- ✓ Editor Manual
- ✓ Deployment Docs
- ✓ Training Sessions
- ✓ Handover

CONTENT PUBLISHING WORKFLOW

Every content update follows a controlled workflow to ensure quality, governance, and publishing consistency.

System Output: Deliverable 2 provides NADEC with a fully configured Umbraco CMS platform featuring structured content management, multilingual support, role-based security, editorial workflows, SEO capabilities, API readiness, and comprehensive documentation, empowering NADEC to independently manage and expand its digital presence.

Legacy Website Migration

Execute a structured and validated migration of existing website content, digital assets, and metadata into the new platform while preserving content integrity, minimizing operational risk, and ensuring business continuity.

HORIZONTAL MIGRATION PIPELINE

MIGRATION DELIVERABLES

- 

1. Migration Strategy
Documented approach, timelines, dependencies, and execution plan.
- 

2. Content Inventory Report
Comprehensive inventory of approved pages, media, and resources.
- 

3. Content Mapping Matrix
Mapping between legacy pages and new structure, templates, URLs.
- 

4. Redirect Strategy
301 redirect plan to preserve search rankings and seamless navigation.
- 

5. Migration Validation Report
QA report confirming successful migration and data integrity.
- 

6. Go-Live Checklist
Final readiness checklist covering validation, approvals, and deployment.

MIGRATION PRINCIPLES

01
Content Integrity
Preserve all approved content, media assets, and metadata throughout migration.

02
Minimal Disruption
Execute migration using controlled deployment to minimize downtime.

03
SEO Preservation
Maintain search visibility through URL mapping, metadata retention, redirects.

04
Quality Assurance
Validate every migrated page before production launch for accuracy.

System Output: The migration process ensures that all approved content, digital assets, and metadata are transferred to the new platform with full integrity, validated quality, preserved search rankings, and minimal operational disruption, providing NADEC with a seamless transition to the redesigned website.

Quality, Performance & Compliance

The new NADEC digital platform will be engineered to deliver high performance, strong search visibility, accessibility compliance, and enterprise-grade security, ensuring a reliable, scalable, and future-ready website.

 **SEO Optimization**

Objective: Improve search visibility with technical SEO best practices.

KEY DELIVERABLES

✓ SEO-Friendly URLs

✓ Meta Titles

✓ XML Sitemap

✓ Robots.txt

✓ Canonical URLs

✓ Structured Metadata

 **Performance Engineering**

Objective: Deliver fast, responsive website with excellent UX across devices.

KEY DELIVERABLES

✓ Optimized HTML/CSS

✓ Image Optimization

✓ Responsive Assets

✓ Efficient Code

✓ Core Web Vitals

 **Accessibility**

Objective: Inclusive digital experience aligned with accessibility standards.

KEY DELIVERABLES

✓ WCAG 2.1 AA

✓ Semantic HTML

✓ Keyboard Navigation

✓ Accessible Forms

✓ Color Contrast

✓ Focus Indicators

 **Security & Protection**

Objective: Protect content, user access, and platform integrity.

KEY DELIVERABLES

✓ Role-Based Access

✓ Secure Auth

✓ HTTPS

✓ Secure CMS Config

✓ Backup Strategy

✓ Security Practices

QUALITY ASSURANCE FRAMEWORK

Search Visibility

01

Technical SEO supporting discoverability and long-term growth.

High Performance

02

Optimized front-end delivering a fast responsive experience.

Inclusive Experience

03

Accessibility integrated into design and development.

Enterprise Security

04

Secure content management, controlled access, platform protection.

System Integration Output: The implemented solution incorporates technical SEO, responsive performance optimization, accessibility best practices, and enterprise-grade security controls as integral components of the platform, ensuring the website is discoverable, performant, inclusive, secure, and ready for long-term operation.

Testing, Deployment & Hypercare

A structured quality assurance and deployment methodology ensures that the website is fully validated, formally approved, and successfully launched with dedicated post-deployment support.

QUALITY ASSURANCE MATRIX

- ✓

Functional Testing - Verify all features, workflows, and business logic
- ✓

Browser Compatibility - Consistent behaviour across supported browsers
- ✓

Responsive Testing - Validate layouts across desktop, tablet, mobile
- ✓

SEO Validation - Metadata, URLs, sitemap, redirects, search readiness
- ✓

Security Testing - Authentication, permissions, secure configurations
- ✓

Accessibility Testing - Compliance with accessibility standards
- ✓

Performance Testing - Loading speed, responsiveness, optimization
- ✓

Regression Testing - Existing functionality unaffected after changes
- ✓

User Acceptance Testing - Final validation by NADEC stakeholders

DEPLOYMENT PROCESS

HYPERCARE DELIVERABLES

1. Go-Live Monitoring

Continuous monitoring during stabilization
2. Priority Issue Resolution

Rapid post-launch issue resolution
3. Production Verification

Validation of processes, forms, integrations
4. Performance Monitoring

Observe responsiveness after deployment
5. Knowledge Transfer

Support NADEC admins during transition
6. Project Closure

Formal completion after stabilization

SUCCESS CRITERIA

- Successful UAT

All requirements approved by NADEC stakeholders
- Stable Deployment

Website deployed with no critical issues
- Operational Readiness

All environments and integrations verified
- Knowledge Transition

NADEC team equipped to manage independently

Methodology Outcome: The testing, deployment, and hypercare framework ensures that the NADEC website is comprehensively validated, securely deployed, and supported through a controlled stabilization period, delivering a reliable and production-ready digital platform.

Assumptions, Dependencies & Optional Services

The successful delivery of the project depends on agreed project assumptions, timely client collaboration, and clearly defined scope boundaries.

PROJECT ASSUMPTIONS

- ✓ Project scope is approved before implementation
- ✓ Timely stakeholder feedback and approvals
- ✓ Required project information is provided by NADEC
- ✓ Existing website content is available for migration
- ✓ Branding assets and design guidelines are supplied
- ✓ Arabic and English content is provided or approved
- ✓ Required third-party licenses are available
- ✓ Production hosting environment is ready before deployment
- ✓ UAT is completed within the agreed timeline
- ✓ Formal acceptance is provided after successful delivery

CRITICAL DEPENDENCIES

- ✓ Stakeholder availability for workshops and reviews
- ✓ Access to the existing website and CMS
- ✓ Access to DNS, hosting, and production environments
- ✓ Availability of required APIs and third-party systems
- ✓ Timely approval of UI/UX designs
- ✓ Timely approval of migrated content
- ✓ Availability of testing environments
- ✓ Completion of security and infrastructure prerequisites
- ✓ Coordination between NADEC Marketing and D&T teams
- ✓ Final production deployment approval

OPTIONAL VALUE-ADD SERVICES

- ☐ Ongoing Website Maintenance
- ☐ Annual Support & AMC
- ☐ Feature Enhancements
- ☐ Additional Language Support
- ☐ SEO Content Optimization
- ☐ Digital Analytics & Reporting
- ☐ Marketing Automation Integration
- ☐ ERP / CRM Integrations
- ☐ Mobile Application Integration
- ☐ Future Website Modules & Enhancements

PROJECT GOVERNANCE PRINCIPLES

1. Defined Scope

Delivery is based on the agreed project scope and approved requirements.

2. Shared Responsibility

Successful delivery requires active collaboration between Code-OX and NADEC.

3. Controlled Change

Additional requirements outside scope follow the change management process.

4. Future Scalability

Solution designed to support future enhancements through optional services.

Mandatory Compliance Matrix

The following matrix demonstrates Code-OX Technologies' compliance with all mandatory requirements defined in Appendix A of the NADEC Website Redesign RFP.

#	REQUIREMENT	STATUS	SECTION	#	REQUIREMENT	STATUS	SECTION
1	Deliverable 1 – Discovery, UX, bilingual UI, design system, front-end templates	✓ Fully Compliant	Section 3	10	Media library, global settings, SEO fields	✓ Fully Compliant	Section 4.1
2	Additional page, template or component by Marketing & D&T	✓ Fully Compliant	Section 3.6	11	Bilingual search, secure forms, integrations	✓ Fully Compliant	Section 4.1
3	Optional Deliverable 2 – Umbraco CMS implementation	✓ Fully Compliant	Section 4	12	Legacy content & media migration with reconciliation	✓ Fully Compliant	Section 4.2
4	Deliverable 1 technology – HTML5, CSS3, JS, Tailwind CSS	✓ Fully Compliant	Section 3.5	13	URL preservation and tested 301 redirects	✓ Fully Compliant	Section 4.2
5	Supported Umbraco / .NET / SQL platform	✓ Fully Compliant	Section 4.1	14	Technical SEO, XML sitemap, robots.txt, hreflang, canonical	✓ Fully Compliant	Section 4.3
6	Arabic RTL & English LTR with localized URLs	✓ Fully Compliant	Sections 3.3 & 4.1	15	Performance, Core Web Vitals, WCAG 2.1 AA, testing	✓ Fully Compliant	Sections 3.5 & 4.3
7	Reusable content types, blocks, governed page building	✓ Fully Compliant	Section 4.1	16	Secure development, secrets, logging, backup & restore	✓ Fully Compliant	Section 4.3
8	Roles, permissions, workflows, audit trail	✓ Fully Compliant	Section 4.1	17	UAT, deployment, cutover, rollback, training, handover	✓ Fully Compliant	Section 4.4
9	Preview, scheduling, versioning, rollback, recovery	✓ Fully Compliant	Section 4.1	18	Warranty / Hypercare and optional support pricing	✓ Fully Compliant	Section 4.4
